

The Ten-Year Institutional Master Plan

The academic, commercial and financial architecture of the College, 2027–2036.

PARTS	LEAVES	PATHWAY	CLASSIFICATION
Eight	95	A1 to C2 · 1,200 hours	Planning instrument

WHAT IT TEACHES	A complete A1 to C2 qualification pathway in six levels.
ACADEMIC HOURS	1,200 · 200 a level
CREDITS	120 · 20 a level
THE AWARD	Six qualifications, one conferred at each level. A learner who stops after two holds two.
EXAMINATION	Set against a rubric published before the work, marked by a named person, marked a second time independently, and moderated across the cohort.
REGISTRY	Every conferral entered the same day and checkable by a stranger, without an account, for as long as the College exists.
ROUTES OF ACCESS	5 pathways and 6 kinds of payer, across 4 regions. One academic standard on every one of them.
CAMPUS	London.
THIS PLAN	The decade 2027–2036, prepared for the Board.
WHAT IS NOT HELD	<i>No accreditation, ranking, institutional partnership or external endorsement. No completed cohort. No External Examiner has confirmed the standard.</i>
EVERY FIGURE	Computed from the College's own records and stated assumptions, and reconciled on every issue of this document.

The College does not sell teaching hours. It admits a learner, teaches them, examines them against a published standard, confers a qualification and keeps the record of it *permanently*.

An hour of instruction is a commodity with a thousand suppliers. A qualification that a stranger can verify, conferred against a rubric published before the work began, is not.

The six qualifications	9
One standard, many ways to reach it	11

THE PATHWAY

1,200 academic hours · 6 levels · 120
credits · A1 to C2

WHAT IS NOT CLAIMED

No accreditation, no ranking, no
institutional partnership, no external
endorsement. No completed cohort.

The College

WorldWide English College is an independent international College, based in London, teaching a 1,200-hour qualification pathway in six levels from A1 to C2.

It is built as an institution rather than as a collection of language classes. Its curriculum is authored and maintained in house. Its examinations are set against rubrics published before the work begins, marked by a named person, marked a second time independently, and moderated across the cohort. Its conferrals are entered in a registry on the day they are made, and any stranger may verify one without an account.

WHAT THE COLLEGE HOLDS

A complete six-level curriculum. An examination architecture with second marking and moderation. A published fee decomposition accounting for every cent of a fee. A conferral and verification chain. And fourteen typeset volumes of its own curriculum and assessment work, free to anyone, enrolled or not.

THE DISCIPLINE

The College states what it holds and is silent about what it does not. Where a reader asks directly, it answers plainly. Every figure in this publication is computed from the College's own records and its stated assumptions, and is reconciled on every issue of the document.

THE ACADEMIC ARCHITECTURE

Six gates, and what passes each

The College's own plate, drawn in engraved line.

THE SIX GATES

Every one of them is necessary. A classification never overrides a gate.

■ MET BY YOUR WORK ■ A RECORD THE COLLEGE MAKES

Where a gate waits on the College's own record, your record says so and marks the gate as the College's.

WHAT A GATE IS

Each level ends at an examination set against a rubric published before the work begins, marked by a named person, marked a second time independently, and moderated across the cohort. Nothing passes on attendance, and nothing passes on a tutor's recommendation alone.

A candidate who does not pass sits again; one re-sit is included and there is no re-sit fee on any route. A candidate who passes is entered in the registry the same day, and the entry can be checked by anyone, without an account, for as long as the College exists.

The six qualifications

6 levels of 200 academic hours and 20 credits each.

CODE	CEFR	QUALIFICATION	HOURS	CREDITS
ECIC	A1	English Communication Introductory Certificate	200	20
HCIC	A2	Higher Communication Introductory Certificate	200	20
CAEC	B1	Certificate in Applied English Communication	200	20
HCAEC	B2	Higher Certificate in Applied English Communication	200	20
ACEC	C1	Advanced Certificate in English Communication	200	20
WEPC	C2	WorldWide English Proficiency Certificate	200	20
COMPLETE A1–C2 PATHWAY			1,200	120

Adopted and published.

WHY SIX, AND WHY THIS SIZE

A level is 200 academic hours because that is roughly what the Common European Framework takes to move an adult one band, and because 4 instalments across 4 months is a commitment a working adult can actually make.

Each level confers its own award. A learner who stops after two holds two qualifications rather than a fraction of one, which is the difference between a pathway and a course somebody abandoned.

The credential is identical on every route. What a route changes is how the learner is taught and how much of the institution's attention they receive on the way to it.

One academic standard. *Many ways to reach it.*

The examination, the rubric, the second marking, the moderation, the registry entry and the award are identical on every route and in every market. What a route changes is the teaching, the attention and the flexibility – never the qualification.

HELD TO IT

A qualification that improves with the fee is not a qualification. The College treats this as a structural commitment rather than a marketing claim, and the reconciliation that produces this document fails if the routes ever diverge on assessment.

Educational philosophy

The College holds that a qualification is worth what its standard is worth, and that a standard is only real if it is published before the work, applied by somebody named, checked by somebody else, and recorded where a stranger can find it.

TEACHING IS A SERVICE, NOT THE CREDENTIAL

How much instruction a learner receives, in what size of room, at what hour of the day and with how much of a named instructor's attention, is a matter of circumstance, budget and professional life. It should be a choice. It should not decide what the qualification is worth.

So WEC-LC separates the two completely. The academic standard is fixed and institutional. The mode of study is chosen by the learner and priced according to what it costs the College to provide.

ACCESS IS AN ARCHITECTURAL QUESTION

An institution that serves only those who can afford its most attentive route has not widened access; it has narrowed its market and called the result selectivity. The Independent pathway exists so that the qualification is reachable by a self-directed learner anywhere in the world at one published price, and the institutional channels exist so that an employer, a university or a ministry can place a cohort where a retail tariff never could.

The Educational Experience

What actually happens to a person who enrolls, from the first enquiry to a credential a stranger can verify.

Eight stations. The two struck in the metal are the ones at which the College confers something: the examination that decides the level, and the award that records it

The passage of a learner	13
Curriculum, teaching and supervision	15
Assessment, examination and the award	17

ONE RE-SIT, NO FEE

A candidate who does not pass sits again.
One re-sit is included on every route and
there is no re-sit fee.

WITHDRAWAL

A full refund inside 14 days of enrolment.

The passage of a learner

A learner enquires, is admitted against a stated entry position, is oriented into the College's learning environment, studies a level, is assessed throughout it, sits an examination at its close, is conferred an award, and either progresses to the next level or stops holding what they have earned.

ADMISSION

Admission establishes where a learner enters the ladder, not whether they are welcome on it. A learner already working in English is placed at the level that matches, and pays for the levels they take rather than the ones they do not need.

PROGRESSION

Each level is a complete qualification. Progression is a decision the learner makes six times, not once, and the College's commercial architecture is built to let them make it that way – including a payment plan that commits to one level at a time.

CONFERRAL

An award is entered in the registry on the day it is made. Verification is public and requires no account, because a credential nobody can check is a piece of paper.

WHAT THE COLLEGE PROVIDES

Twelve components, and teaching is one

The complete educational service behind every route, in the order a learner meets it.

01

The academic programme

A complete six-level pathway from A1 to C2, each level conferring its own qualification.

02

The curriculum

The College's own structured curriculum, learning materials and academic sequence, authored and maintained in house.

03

Teaching and guided learning

Live instruction according to the pathway chosen, from seminar to one-to-one.

04

Academic supervision

Progress monitored against the standard, with intervention when a learner falls behind it.

05

Assessment

Assignments, progress assessment and formal academic evaluation throughout each level.

06

Examination

A qualification examination at the close of every level, set against a rubric published before the work begins.

07

Quality assurance

Independent second marking and moderation across the cohort, on every route without exception.

08

Academic advising

Structured guidance on progression, study planning and the route through the qualification.

09

The learning environment

The College's digital estate: the platform, resources, media, secure assessment and the academic record.

10

Student services

Admissions, onboarding, scheduling, examination administration and learner support.

11

The qualification

The WEC-LC award at each level completed, conferred against the same standard on every route.

12

Registry and verification

A permanent academic record and public verification of the credential, checkable by a stranger without an account, for as long as the College exists.

Every component is identical on every pathway except the third, which is what a pathway chooses. The academic specification behind each route is set out at Appendix C.

SECOND MARKING

Every examination script is marked independently a second time, by somebody who cannot see the first mark.

MODERATION

Marks are moderated across the cohort before any of them is released, so a lenient marker cannot confer a level.

Assessment and examination

Assessment runs throughout a level and is not the examination. It is how a learner and their instructor find out what is not yet working while there is still time to act on it.

THE RUBRIC COMES FIRST

The criteria against which a level is examined are published before the teaching begins. A standard written after the work has been seen is not a standard; it is an opinion with a number attached.

NOBODY CONFERS ALONE

A named marker marks. A second marker marks independently. The cohort is moderated. No single person can confer a WEC-LC level, and no instructor can confer one on a learner they taught without those checks standing behind it.

THE AWARD, AND THE RECORD OF IT

A learner who passes is conferred the qualification for that level and entered in the registry the same day. The entry is public, permanent and verifiable without an account.

Nothing passes on attendance. Nothing passes on a *recommendation.*

Second marking and moderation apply on every route, in every market and through every channel – including a sponsored cohort of a hundred and twenty, and including a bespoke programme built for one person.

MARKED INDEPENDENTLY

Twice

The Commercial Architecture

Five ways to take one qualification, four markets, six kinds of payer and five ways to pay — built so that a learner’s circumstances decide their route and never their credential.

The five pathways	19
What the tuition provides	21
How it is paid	
Who buys, and why it matters	23

THE ACCESS PORTFOLIO

Five pathways to one qualification

Reference investment for a complete A1 to C2 pathway. Regional tariffs follow overleaf.

PATHWAY	DESIGNED FOR	ACADEMIC SUPPORT	FLEXIBILITY	INVESTMENT
Independent	Self-directed learners, and learners already working in English who need the qualification rather than the classroom.	Academic advising and assessment feedback	Entirely self-paced	\$3,600
Guided	Learners who want structure, a cohort and regular academic direction.	Seminar teaching and marked work	Scheduled, with a published timetable	\$17,800
Tutored	Learners who want close academic support and a named person responsible for their progress.	Individual tutorial and full marking	Scheduled, with individual sessions arranged	\$29,000
Executive, in cohort A closed cohort of no more than six professionals.	Professionals, senior managers, entrepreneurs and public-sector officials whose English has to work in the room where decisions are made.	Senior academic staff, cohort of six or private	Scheduled to the learner	\$52,400
Executive, private One to one throughout, with a named academic adviser and quarterly progress review.			Scheduled to the learner	\$86,100
Executive Bespoke	Senior and high-profile individuals whose requirements are genuinely particular, and whose time is the binding constraint.	Dedicated senior academic team	Exceptional – scheduled entirely to the holder	\$142,250

PROPOSED — NOT ADOPTED

Independent is adopted and published; every other route is solved from the College's financial constitution rather than set by preference.

WHAT THE INVESTMENT BUYS

A qualification, an education, and a *record* that outlives both.

Tuition funds the complete institutional service: the curriculum, the teaching, the supervision, the assessment, the examination, the independent second marking, the moderation, the advising, the learning environment, the student services, the award and the permanent verifiable record of it.

COMPONENTS

12

OF WHICH TEACHING

One

IDENTICAL ON EVERY ROUTE

Eleven

THE PAYMENT ARCHITECTURE

How a pathway is paid for

Shown on the Tutored pathway at \$29,000. Every route offers the same arrangements.

ARRANGEMENT	WHAT IT MEANS	PAYMENTS	EACH	TOTAL
In full A settlement advantage of three per cent, which is the value to the College of the working capital and not a sale.	The complete pathway settled on admission.	1	\$28,130	\$28,130
Annually	One payment a year for the duration of the pathway.	3	\$9,667	\$29,000
Level by level Each level confers its own qualification, so a learner who stops after two has paid for two and holds two.	One payment at the opening of each of the six levels, with no commitment beyond the level in progress.	6	\$4,833	\$29,000
By instalment A four per cent administration loading, which is what the arrangement costs the College to operate.	Four instalments across each level – twenty-four across the pathway.	24	\$1,257	\$30,160

Settlement in full carries a three per cent advantage, which is the value to the College of the working capital. Payment by instalment carries a four per cent administration loading, which is what the arrangement costs to operate. Neither is a promotion, and the College does not discount its way to a decision.

THE INSTITUTIONAL CHANNELS

Who buys a WEC-LC place

The same qualification, bought through six different relationships.

PAYER	WHO THEY ARE	PLACES A RELATIONSHIP	BAND
The learner	A learner enrolling on their own account.	One	—
A family The academic relationship remains with the learner. A funder receives confirmation of enrolment and of conferral, and nothing further without the learner's instruction.	A parent, relative or benefactor funding a learner's education.	One	—
An employer	A company purchasing places for its own staff, usually against a training budget and an appraisal cycle.	22	15%
An institution	A university, school, professional body or employer federation purchasing a cohort.	48	15%
A sponsor	A ministry, agency or foundation funding places at scale under a public or charitable mandate.	120	20%
A partner institution A partnership is an agreement to admit cohorts on published terms. It is not an accreditation, a validation or a joint award, and the College will not describe it as one.	A negotiated standing arrangement carrying successive cohorts rather than a single purchase.	64	20%

The bands are the College's own published partner bands. It does not invent a discount to win an agreement, which is a more durable thing to be able to say in a negotiation. The College also funds its own access places at the published tariff, so that an access place is a cost the institution carries rather than a discount it advertises.

WHY THE CHANNELS EXIST

What one negotiation buys

Acquisition paid per learner never amortises; paid per agreement it divides by the seats it carries.

ACQUIRED ONE AT A TIME			THE STRUCTURAL ARGUMENT
Gulf executive	☐	\$2,100	The cost of finding the next Gulf executive is the cost of finding the last one. Paid per agreement it divides by every seat the agreement carries, and a single negotiation can carry twenty-five to over a hundred.
Gulf professional	☐	\$1,250	
UK and Europe	☐	\$980	

ONE NEGOTIATION, MANY SEATS		
Corporate	☐	\$657 19 agreements × 15 seats
Institutional	☐	\$414 8 agreements × 101 seats

5.1×

cheaper to acquire a seat through an agreement than a Gulf executive one at a time.

MODELLED

DEAREST RETAIL SEAT	CHEAPEST AGREEMENT SEAT	MULTIPLE	RETAIL-ONLY FLOOR
\$2,100 A Gulf executive, acquired singly	\$414 One negotiation, many seats	5.1× Cheaper per seat	22% Against a 10% allocation

IV

The Global Market

What comparable programmes charge, what the research did to an earlier draft, and the markets where the College sells through a sponsor rather than a price list.

The regional architecture

Five segments by reachable population. A ruled and hatched segment carries a direct published observation; an outlined one is modelled from the segments that do.

What the research did to the plan

What comparable providers charge

Where the evidence does not exist

THE REGIONAL ARCHITECTURE

One architecture, four price levels

The complete pathway, as published in each market. A dash is a route the College does not offer at retail in that region.

PATHWAY	GULF	UK & EUROPE	ASIA & WORLD	WEST AFRICA
Independent	\$3,600	\$3,600	\$3,600	\$3,600
Guided	\$17,800	\$18,350	\$6,250	Through a sponsor
Tutored	\$29,000	\$29,850	Through a sponsor	Through a sponsor
Executive, in cohort	\$52,400	\$53,950	Through a sponsor	Through a sponsor
Executive, private	\$86,100	\$88,700	Through a sponsor	Through a sponsor
Executive Bespoke	\$142,250	\$146,500	Through a sponsor	Through a sponsor

The index is computed from the College's own researched willingness to pay, weighted by reachable population, against the best-evidenced market. Where a region will not carry a route at a price that covers what it costs to deliver, the College does not quote one — the route is available there through an employer, an institution or a sponsor.

MODELLED

WHAT THE RESEARCH DID TO THE PLAN

Assumed against researched

Price of a complete pathway at which a segment converts at its reference rate.

WHAT THE RESEARCH MOVED

Each line runs from what an earlier draft assumed a segment would pay to what the published evidence says it will. **Four of the five moved, and none of them upwards.**

West Africa moved by nearly a factor of three, and that single correction removes more demand from the model than every other change combined. A Lagos IELTS course is about forty-nine dollars a month; the whole published Nigerian range tops out near eighteen hundred.

The plan this replaced projected \$61.6M of revenue on the assumed figures. It is recorded rather than quietly replaced, because an undocumented correction gets re-proposed six months later by somebody who does not know it was already made.

MODELLED Willingness to pay is an inference from published tariffs, not an observation of it.

SEGMENTS MOVED

4 of 5

None of them upwards

LARGEST CORRECTION

West Africa

SUPERSEDED PLAN

\$61.6M

Recorded, not deleted

OBSERVATIONS KEPT

20

Each with its source address

THE REFERENCE MARKET

The Gulf, because the British Council publishes its Saudi tariff and the whole A2–C1 ladder can be computed from it. Every other region is expressed relative to that.

Four markets, four architectures

One global price multiplied by a feeling about a country is not a regional strategy. The College indexes its tariff on the willingness to pay its own research established, market by market, and then applies two disciplines to keep the result honest.

NOTHING IS SOLD BELOW WHAT IT COSTS

Where a region's level will not carry a route at a price that covers delivery with a real contribution, the College does not quote one. West Africa is the case that proves it: the researched figures say plainly that no taught pathway reaches it at retail, and the answer is the access route and sponsored cohorts – not a taught pathway sold below cost to look inclusive.

A TARIFF HAS A RULE ABOUT WHO IT APPLIES TO

A regional tariff attaches to where the learner is and who is paying, and the College publishes that as a policy. An institution with four prices and no rule about which one applies has not built a regional architecture; it has built an arbitrage.

What comparable providers charge

Published tariffs, converted. Gathered 2026-09-19.

MARKET	PROVIDER	LOCAL PRICE	USD	CONFIDENCE

Marked as modelled

Four markets and one central question the research could not answer.

MARKET OR QUESTION	STANDING	WHAT THE MODEL DOES INSTEAD
Qatar, Kuwait, Bahrain, Oman	MODELLED	No published provider tariffs found. Modelled at Saudi/UAE levels, which is an assumption about four distinct markets and is marked as one.
Ghana and wider West Africa beyond Nigeria	MODELLED	Scaled from the segments that carry direct observations.
North America	MODELLED	Not a founding market in the roadmap; not researched in depth.
Asia and rest of world	MODELLED	Scaled from the segments that carry direct observations.
Willingness to pay for a MULTI-YEAR credentialed English pathway	INSUFFICIENT DIRECT EVIDENCE	Pathway prices are built up from per-level comparables rather than read off a competitor.

Appendix A carries the full register, including the sources that were rejected.

REJECTING WELL IS MOST OF THE JOB

Thirty candidate sources were pulled and eight shipped. What did not survive is recorded beside what did, because an undocumented rejection gets re-proposed six months later by somebody who does not know it was already considered.

Four markets carry no direct observation at all. They are modelled from the segments that do, and marked as modelled wherever they appear. The College does not convert an absence of evidence into a number and hope nobody checks.

No provider sells a six-level, 1,200-hour credentialed pathway as one purchase. *WEC-LC's product has no market price, because the product is not on the market.*

That is why the tariff is built from what the College must staff and what its financial constitution requires, and checked against published evidence – rather than read off a competitor who is selling something else.

V | The Financial Constitution

Where every dollar of collected revenue is governed, what each line is forbidden from becoming, and the decade that follows from it.

Consumed running the institution	Retained as institutional capital
Where every dollar is governed	33
One column of collected revenue, divided. Four courses are consumed running the institution; the two beyond the struck rule are retained as	
What each line is, and is not	35
What would close the gap	37
The decade	39
Three scenarios	41

THE GOVERNING FINANCIAL LAW

Where every dollar is governed

Four lines consumed running the institution; two retained as capital above the struck rule.

HOW THE ELEVATION IS READ

The shaft is what running the institution consumes, hatched at a density proportional to its weight: payroll heaviest, technology lightest. The struck gold rule is the division. Above it, ruled rather than hatched, is what the framework would have *held* – because those two lines are not spent.

The framework asks that **50% of every dollar collected be retained**: 25% restricted or designated institutional capital, 25% a Board-authorised discretionary allocation which is **not** automatically withdrawable income. No distribution from it is modelled anywhere in this plan.

Sold as this plan sells – four tariffs into four markets, two of which carry no taught route at retail – the College retains **39.3%**. The gap is not a discretionary overspend. It is payroll, at 44.9% of revenue against a 25% share, and the following spread states what closes it and what that would cost.

BOARD DECISION REQUIRED Proposed governance targets, not a historical result.

RETAINED, ASKED	RETAINED, ACHIEVED	THE LINE THAT BINDS	STANDING
50%	39.3%	44.9%	Open
Reserve and Strategic, held as capital	At the committed tariff, priced by region	Payroll, against a 25% share	Board decision required

DEFINITIONS

What each line is, and is not

Payroll	25%
All employed people: academic delivery, examinations, registry, admissions, student support, platform engineering, academic standards, finance and compliance, and institutional leadership, inclusive of on-costs.	
LMS and Technology	5%
The learning platform, hosting, authentication, storage, media, security and the tooling the College runs on. Salaries of the people who build it sit in Payroll.	
Operating Expenses	10%
Legal, accounting, insurance, audit, professional services, the London registered office, examinations administration, and institutional administration.	
Marketing and Student Acquisition	10%
Media, content, campaigns, partnership development and the admissions conversation – the cost of being found and understood. Salaries of the people who do it sit in Payroll.	
Institutional Reserve	25%
Restricted or designated institutional capital retained to strengthen liquidity, fund major institutional initiatives, absorb exceptional shocks, support future expansion, and maintain long-term financial resilience.	
<i>Not distributable. Not a surplus line. Not available to fund ordinary operating shortfalls without a recorded Board resolution.</i>	
Strategic and Founders' Allocation	25%
A discretionary institutional allocation available for founder remuneration, strategic investment, expansion, intellectual property development, new campuses and markets, acquisitions, exceptional executive compensation, and other Board-authorized strategic purposes.	
<i>NOT automatically withdrawable founder income, and the plan never presents it as profit. Any distribution from it is a separate Board decision on a separate occasion.</i>	

Nothing is distributed before the institution is *funded.*

The framework asks that 50% of every dollar collected be retained as institutional capital. At the committed tariff, priced by region, the College retains 39.3% – and the part of that obligation which does not depend on the gap holds absolutely: no distribution from the Strategic Allocation is modelled in any year of this plan, under any scenario, at any tariff tested.

RETAINED, ASKED

50%

RETAINED, ACHIEVED

39.3%

MODELLED DISTRIBUTIONS

None

What would close the gap, and what it would cost

The whole tariff swept, with the retained share read off beside the learners and the revenue each multiple costs.

TARIFF	TUTORED	RETAINED	PAYROLL	LEARNERS A YEAR	NET TUITION
Committed	\$29,000	39.3%	44.9%	2,978	\$14.6M
×1.20	\$34,800	42.8%	41.7%	2,684	\$13.7M
×1.40	\$40,600	46.2%	38.5%	2,504	\$13.1M
×1.60	\$46,400	48.4%	36.2%	2,395	\$12.7M
×1.80	\$52,200	49.4%	35.0%	2,301	\$12.3M
×2.00	\$58,000	50.5%	33.6%	2,247	\$11.9M

MODELLED

Each row is the whole portfolio re-solved at that tariff and sold into all four markets through every payer.
The Independent fee is adopted and published, so it is pinned and does not scale.

WHY NO PRICE ON THIS TABLE IS THE ANSWER

The framework asks for 50%. The committed tariff returns 39.3%. Doubling it returns 50.5% – and costs 731 learners a year and \$2.7M of net tuition, at a Tutored price of \$58,000 against a British Council ladder that computes to \$10,600–\$14,100.

Payroll is the line that binds, and it never reaches its share. It is 44.9% of revenue at the committed tariff and 33.6% at twice the price, against a 25% allocation.

No tariff closes it because it is not a pricing question: teaching is what this institution does, and an institution that spends a quarter of its income on teaching is not the institution described in Part Two.

So the plan does not choose. It states the finding, prices the College where the research says the market is, and puts the framework to the Board.

WHAT THE CONSTITUTION PRODUCES

The decade

Net tuition as ruled columns; surplus against the year it crosses nil.

TWO REGISTERS, TWO QUANTITIES

The upper register is net tuition, year by year. The lower is surplus against its own nil rule, on its own baseline – drawn separately because a ten-million-dollar revenue and a first-year deficit on one plot make the second invisible.

The year the institution turns is ruled through both. Before it the College is consuming capital; after it, generating it.

Revenue is recognised in the year it is *taught*, not the year it is sold, which is why the curve lags the admissions behind it.

MODELLED A strategic projection, not a trading record.

MODELLED

 Full schedules at Appendix D.

Three scenarios

Each changes something the College would have to do differently, not simply the number of students.

SCENARIO	REVENUE	SURPLUS	YEAR-10	LEARNERS	TO C2
Conservative	\$46.0M	\$7.0M	\$8.6M	12,301	834
Core Management Plan	\$70.5M	\$19.1M	\$14.6M	15,375	1,941
High Growth	\$81.7M	\$26.2M	\$17.4M	15,137	2,927

The Core Plan is the recommended execution case, not the midpoint of the other two.

WHAT A SCENARIO HAS TO CHANGE TO BE ONE

A scenario set whose only variable is “more students” tests nothing. Each of these changes something the College would actually have to do differently: what it costs to be found, how many learners continue from one level to the next, and how far the College can reach at all.

All three reach cumulative surplus inside the decade, but not at the same time: the Conservative case crosses in 2032, four years after the High Growth case and two after Core. Those four years are the plan’s real exposure. The Core case requires continuation and reach to hold broadly as modelled, and reach is the one quantity here that was never researched.

Reach is the one quantity in this plan that was never *researched*.

Every other major assumption rests on a published observation or on the College’s own records. How many people the College can actually reach, at what cost, is modelled – and the Conservative case exists to show what the decade looks like if that model is wrong.

THE TEN-YEAR ROADMAP

Five phases, and what has to be true at the end of each

I Foundation

YEARS 1–2

Open the Gulf and West Africa. Appoint the academic offices. Publish the first examination papers and confer the first awards. Prove the qualification end to end before spending to be known.

162 under instruction · \$0.7M net tuition

II Validation

YEARS 3–4

Europe opens. Break-even is cleared and the reserve begins. Continuation, not acquisition, becomes the measure that matters. The External Examiner confirms the standard against published rubrics.

786 under instruction · \$2.9M net tuition

III Scale

YEARS 5–7

Asia opens. Sponsored cohorts become a material and deliberate share of enrolment – one negotiation carrying a cohort at a published band rather than learners acquired one at a time. The establishment is fully staffed and the institution stops depending on any one person.

2,887 under instruction · \$10.4M net tuition

IV Maturity

YEARS 8–9

Reserve builds toward its target in months of operating cost. Accreditation is pursued with a completed cohort and an examiner's confirmation behind it, not before.

3,756 under instruction · \$14.2M net tuition

V Standing

YEARS 10

The institution is self-funding, externally examined, internationally enrolled, and holds a register of awards a stranger can check without an account.

3,756 under instruction · \$14.2M net tuition

What has to be true to leave a phase

Five gates, each observable by somebody outside the room the decision is taken in.

WHAT MUST BE TRUE TO LEAVE IT, AND HOW THAT IS		
PHASE	OBSERVED	IF IT IS NOT
I · Foundation Years 1–2	A full level examined end to end, every script second-marked, and the first awards on a register a stranger can check. The award register carries conferrals, and the assessment record carries a second mark against every script behind them.	Europe does not open. The Foundation year runs again on the two markets already open, and nothing is added to the prospectus meanwhile.
II · Validation Years 3–4	Cumulative position above nil, the reserve open, and an External Examiner appointed and reporting against rubrics published before the work. The cumulative surplus line crosses nil; the examiner's report exists and is dated after the sitting it examined.	Asia is deferred and acquisition holds at the Foundation level. On the Conservative case the crossing arrives two years later and Phase III waits for it: the gate is the event, not the calendar.
III · Scale Years 5–7	The establishment staffed to what the timetable requires, and no single academic office load-bearing on one person. Instructors in post against the establishment the specification computes; every academic office with a named holder and a deputy.	Admissions are capped at what the College can teach – which is how the model already behaves: it turns learners away and records the number.
IV · Maturity Years 8–9	The reserve at its target in months of operating cost, and a completed cohort with an examiner's confirmation to put behind an application. Reserve against the target the policy computes each year; the cohort and the confirmation exist or they do not.	No application is made. An institution that applies on a prospectus has told the assessor what it thinks of the standard.
V · Standing Years 10	Nothing follows, so nothing is gated. What is stated is what must remain true. Self funding; externally examined; no market above the concentration limit; every award on a public register.	A year in which any of the four stops being true is treated as a phase reversal, not a variance.
Authored judgement. The observations are of things the College already records; the consequences are decisions the Board is asked to pre-commit to.		

A PHASE GATED ON A DATE IS NOT A PHASE

Most plans of this kind advance because the year ended. This one advances on evidence: each gate names what must be true, where it is recorded, and what the College does instead if it is not there. **Validation does not begin because it is Year Three** – it begins when the

cumulative position crosses nil and an External Examiner is reporting, which is 2031 on the Core Plan and 2032 on the Conservative case.

And **Maturity confers no permission to apply for accreditation**. It requires a completed cohort and an examiner's confirmation to put behind the application.

WHAT THE BOARD IS ACTUALLY ASKED FOR

The whole of the capital requirement

Cumulative position, each case drawn as far as the year it turns.

A PATIENCE REQUIREMENT, NOT A CAPITAL RAISE

Everything else in this publication is drawn across the decade, and on a scale that runs to \$19.1M the only part of the plan that asks the Board for anything is four hundredths of the plate. This is that part, at its own scale.

The institution is in cumulative deficit for its first 4 years and its deepest point on the Core Plan is **\$0.7M**. If the plan underperforms to the Conservative case the deepest point is **\$1.0M**, reached in 2029, and the crossing moves to 2032.

The larger of those two numbers is the size of the ask. It is not a capital raise against a ten-year return; it is the working capital of an institution that is teaching and being paid from its second year, and a Board that can fund the worst case has funded the plan.

The deepest the institution goes is \$0.99M, on the Conservative case, and it is back above nil inside the decade. That is the whole of the capital requirement.

MODELLED Cumulative surplus, not cash at bank.

DEEPEST POINT, CORE	DEEPEST POINT, CONSERVATIVE	TURNS, CORE	TURNS, CONSERVATIVE
\$0.7M	\$1.0M	2031	2032
In 2028	In 2029	Cumulative above nil	Two years later, and still inside the decade

The order the markets open in

Four markets, opened over the first four years, each at its own acquisition cost.

MARKET	OPENS	ACQUISITION	ENROLLED	INDEPENDENT	THROUGH A PARTNER
Saudi Arabia and the Gulf	Year 1	\$1,450	46%	10%	44%
Nigeria and West Africa	Year 1	\$420	34%	58%	8%
United Kingdom and Europe	Year 2	\$980	62%	26%	12%
Asia and the rest of the world	Year 4	\$610	41%	47%	12%

MODELLED

Shares are of the learners each market sends, not of the College's intake.

WHY THIS ORDER AND NOT ANOTHER

The Gulf opens first because it is the best-evidenced market the College holds and the one where employer and family sponsorship is ordinary rather than exceptional. West Africa opens with it because the access route reaches it on day one at a price that needs no negotiation.

The United Kingdom and Europe follow in the second year, once there are conferrals to point at. Asia and the wider world open in the fourth, and they open last for a reason the College states rather than hides: it holds no direct published evidence for that market, and it will not spend to be known in a market it has not researched.

A College that opens everywhere at once has not sequenced its markets; it has divided its acquisition budget by four and hoped.

WHAT THE COLLEGE CAN ACTUALLY TEACH

The establishment, and what it could not reach

The instructors the timetable requires, and the learners turned away for want of them.

The establishment the timetable requires

Learners the College could not teach

622 in 2031

THE NUMBER NOBODY WANTS TO PUBLISH

A projection that books every learner it could win is a projection of a spreadsheet. This model turns learners away when the College has not got the instructors to teach them, and records the number.

The establishment is not a ratio somebody chose. The College publishes what each route buys – tutorial hours, seminar hours at a stated group size, pieces of marked work – and an instructor has a contracted year of which a stated fraction reaches a learner. Dividing one by the other gives the establishment the timetable actually requires, and it moves when the specification moves.

Last year’s cohort is taught first. A College that admits a new class while its continuing students go untaught has not managed a capacity constraint; it has broken a promise.

MODELLED

Capacity binds on instructors, not on rooms.

THE DECADE, BY MARKET

Where it comes from, and the rule against one place

Share of net tuition by market, against the register’s own 45% concentration warning.

Across the decade the largest market is Gulf, at 38.6 per cent of net tuition against a 45 per cent warning. It stands above that warning for the first 3 years, while it is the only market open.

A DIVERSIFICATION THAT IS SEQUENCED, NOT ASSUMED

The College opens the Gulf and West Africa together, Europe in the second year and Asia in the fourth, and until the second market opens it is **as concentrated as a single-market institution**: 81% of the first year comes from the Gulf.

That is above the College's own early warning, and the plate says so rather than beginning at the year it stops being true. The warning is cleared from 2030 and stays cleared. Across the decade the largest market is 38.6% of net tuition.

The two lower bands are the part of the argument a price list cannot make. Asia and West Africa carry **no taught route at retail at any price the College can deliver at**; every taught learner there arrives through an institutional agreement, priced from the College's own contribution floor.

MODELLED

Net tuition, recognised in the year it is taught.

GULF

38.6%

3,232 learners, 40% through an agreement

UK & EUROPE

27.3%

2,319 learners, 38% through an agreement

ASIA & WORLD

17.4%

4,872 learners, 33% through an agreement

WEST AFRICA

16.6%

4,957 learners, 47% through an agreement

The four markets, and what each is quoted

One table, on the same four markets Part Four prices – and in the same order.

MARKET	OPENS	PRICE LEVEL	TAUGHT ROUTE AT RETAIL	LEARNERS	NET TUITION
The GulfResearched against published tariffs	Year 1	1.00×	6 routes	3,232	\$27.2M
The United Kingdom and EuropeResearched against published tariffs	Year 2	1.03×	6 routes	2,319	\$19.2M
Asia and the wider worldModelled; no published tariff found	Year 4	0.35×	2 routes	4,872	\$12.3M
West AfricaResearched against published tariffs	Year 1	0.15×	MODELLED None – reached through a sponsor	4,957	\$11.7M

MODELLED

Price level is the index the regional tariff is built from, against the Gulf at 1.00. Learners and net tuition are the Core Plan's ten years.

WHY TWO OF THE FOUR HAVE NO PRICE

A taught pathway has a delivery cost, and beneath that cost plus the contribution the College's constitution requires there is no price – only a loss dressed as access. Published Nigerian tariffs top out near a fifth of what the cheapest taught route costs to staff, so the College does not quote one.

What it does instead is reach those markets through a buyer who can fund them: a ministry, a foundation, an employer federation. **47%** of West African learners and **33%** of Asian learners arrive that way, against 40% in the Gulf. That is a dependency, and it is named in the risk register rather than presented as a strategy without a cost.

What the College will not do

Eight positions, each enforced somewhere in this plan rather than promised here.

THE COLLEGE WILL NOT	WHY, AND WHAT ENFORCES IT	HELD BY
Award a qualification it cannot second-mark	Second marking and moderation apply to every script on every route in every market. It is the one measure with no target, because the target is all of them.	Assessment Integrity Committee
Discount below a published band to win an agreement	The partner bands are published and are applied as published. A College that invents a discount in a negotiation has told the buyer its price was never a price.	Board of Governors
Describe a partnership as an accreditation	A partnership is an agreement to admit cohorts on published terms. It is not a validation, a recognition or a joint award, in either language the College publishes in.	Board of Governors
Open a market it has not researched	Asia and the wider world open last for a stated reason: the College holds no direct published evidence there and will not spend to be known in a market it has not studied.	Chief Executive
Admit beyond what it can teach	The projection turns learners away when the establishment cannot reach them and records the number. Last year's cohort is timetabled before this year's admission.	Director of Academic Standards
Publish a person into an office they have not accepted	An office may be defined and unfilled, and the plan says so. A holder and an appointment date travel together or neither is published; the build fails otherwise.	Registrar
Let a commercial relationship reach an academic decision	No commercial authority here can alter an assessment outcome. A sponsor buys places on the published specification, not an opinion about how the work is marked.	Academic Senate
Publish a figure the record cannot source	Every numeral here comes from a file recording who attested it and when. A number typed confidently into a paragraph fails the build – a duller mechanism than integrity, and a more reliable one.	College Executive

Authored, and enforced: by a published band, by a build that fails, or by a model that refuses to book the enrolment.

WHY THIS PAGE EXISTS

Each of these is a decision already taken, and each could be quietly reversed in a bad quarter. Collected on one page they are harder to reverse quietly.

ENFORCED, NOT PROMISED

Three of the eight are enforced by the build itself: a personal name in an office with no appointment behind it, a numeral the record cannot source, and an unbacked superlative each fail a test and stop the publication being produced at all.

THE COST OF THE FIFTH

Refusing to admit beyond capacity is the one exclusion with a published price. Over the decade the Core Plan turns away 1,950 learners it could have enrolled and does not book their tuition.

The other half of a strategy

A ten-year plan is usually a list of intentions, and intentions are cheap because nothing in them can be breached. What an institution refuses to do is the part a reader can hold it to, and it is the part that costs something.

EACH OF THESE HAS A PRICE

Not discounting below a published band loses agreements. Not opening an unresearched market leaves the fourth region closed for three years. Not admitting beyond the establishment forfeits real tuition in every year of the decade, and the plan prints that number rather than smoothing it into the reach assumption.

AND EACH HAS A REASON THAT OUTLIVES THE QUARTER

A band that bends once is not a band. A market entered on optimism is an acquisition budget divided by hope. A cohort admitted beyond the timetable is a promise made to a learner that somebody else will have to break.

WHAT THE BOARD IS ASKED TO DO WITH THEM

Nothing, while they hold. These are not proposals; they are the positions on which the rest of the plan was computed. A Board wishing to relax one would be changing the model rather than the presentation.

What the College measures

Financial sustainability matters enormously. It is not the whole institutional story.

MEASURE	WHY IT IS TRACKED	AT YEAR TEN
Learners admitted	Reach. An institution that cannot find learners cannot teach anybody.	15,375
Awards conferred	Completion. Admissions without conferrals is churn with a prospectus.	33,409
Learners reaching C2	The top of the ladder actually being climbed.	1,941
Under instruction	Standing academic load, and the establishment it requires.	3,756
Turned away for capacity	The gap between what the College can sell and what it can teach.	1,950
Institutional reserve	Resilience, measured against 9 months of operating cost.	\$11.9M
Regions served	Diversification. A College dependent on one market is a College with one risk.	4
Second-marking coverage	Academic integrity. The one measure with no acceptable shortfall.	Every script

MODELLED

 except the last, which is a standing commitment.

WHY SURPLUS IS NOT THE ONLY LINE

An institution measured only on surplus will reach it by teaching fewer people more expensively, and will call that a strategy. These are the measures the Board is asked to hold management to, and half of them are not financial.

The last has no target because it has no acceptable shortfall. Second marking and moderation apply to every script on every route in every market, and a year in which that slipped would not be a year in which the College grew.

An international English institution, *not* a collection of language classes.

The ten-year objective is a College that is financially resilient, academically disciplined, internationally diversified and capable of being examined by somebody outside it – in that order, and with none of the four traded for another.

Governance and Resilience

Who decides what, the separations that protect a learner, and the twenty risks the College is watching.

Reserve policy and drawdown	Board of Governors	—	Annual, and on any drawdown

Several offices named here are defined and unfilled. The College does not publish a person into an office they have not accepted.

Governance and Resilience

The instruments the College is governed by

24 adopted instruments, each with the authority that adopted it and the day it did.

INSTRUMENT	WHAT IT GOVERNS	ADOPTED BY	ADOPTED
Academic Regulations regulation	The arithmetic of the award: the marking scale, what composes a module and a level mark, progression, classification, and the three stages of appeal.	The College Executive	2026-08-20
Examination & Assessment Regulations regulation	How an assessment is set, sat, marked and second-marked; the conduct of an examination and what happens when one is missed.	The College Executive	2026-08-20
How You Are Assessed framework	The award standard in the learner's own words: four skills marked apart, criteria published before the work, and what a mark does and does not mean.	The College Executive	2026-08-14
Awards & Honours framework	The five ranks, their thresholds, and the awards conferred at each of the six levels.	The College Executive	2026-08-14
Academic Integrity code	What misconduct is, how it is investigated, the right of reply before any finding, and the range of outcomes.	The College Executive	2026-08-14
Conduct & Learner Rights code	What the College owes a learner and what it asks of them, and the rights that hold while any procedure runs.	The College Executive	—
The Student Handbook handbook	Everything a learner is governed by and entitled to, gathered in one document and cross-referenced to the instrument behind each part.	The College Executive	—
The Tutor Handbook handbook	What a tutor of this College is appointed to do: the marking obligation, the response window, the observation cycle and the standard held to.	The College Executive	—

THE INSTRUMENTS THE COLLEGE IS GOVERNED BY — CONTINUED

INSTRUMENT	WHAT IT GOVERNS	ADOPTED BY	ADOPTED
The Quality Assurance Manual manual	Ten leaves, and every station in them carries a month, an owner and a deadline.	The College Executive	—
The Quality Architecture framework	The bodies, the councils and the review cycle: what is checked, by whom, and how often.	The College Executive	2026-08-18
Intellectual Property policy	Who owns what a learner writes, what a tutor produces and what the College publishes, and the licence each carries.	The College Executive	—
Research & Publication policy	What the College may publish about its own teaching, what it must not claim, and the ethics that bind any study of its learners.	The College Executive	—
Artificial Intelligence Policy policy	The bands: what a learner may use a machine for, what a tutor may, and what the College will not delegate to one.	The College Executive	—
The Digital Learning Environment policy	What the platform is required to do, what it keeps, and the standard it is held to when it fails.	The College Executive	—
Teaching Practice framework	How a lesson of this College is built and what a learner is entitled to see happen in one.	The College Executive	—
Complaints procedure	What this instrument hears and what the appeal route hears, the informal stage, the twenty working days, and the remedies an upheld complaint gets.	The College Executive	2026-08-17

THE INSTRUMENTS THE COLLEGE IS GOVERNED BY — CONTINUED

INSTRUMENT	WHAT IT GOVERNS	ADOPTED BY	ADOPTED
Privacy & Your Data policy	What the College holds about a learner, why, for how long, and what it will not erase against a permanent academic register.	The College Executive	—
Safeguarding & Learner Wellbeing policy	A rule of the College, binding on everyone who teaches or administers under it, and the route a concern travels.	The College Executive	—
Accessibility statement	The standard the College holds its own pages to, the adjustments a learner may ask for, and how to say when it has fallen short.	The College Executive	—
Equality, Diversity & Inclusion statement	What the College undertakes, what it measures, and what it refuses to reduce to a figure.	The College Executive	—
Admissions Policy policy	Who is admitted, on what evidence, and the five stages an application travels with the office responsible for each.	The College Executive	—
Studying From Your Own Country guidance	What differs by country: the clock, assessment, paying under a currency restriction, how a name is printed, and what a UK visit does and does not mean.	The College Executive	—
Alumni Standing framework	What a graduate remains entitled to, the chapter each award admits them to, and what standing does not buy.	The College Executive	—
What the Qualification Is For framework	The stated use of the award, how an employer verifies it without asking the College, how an organisation sponsors learners, and the outcomes methodology adopted before any outcome figure exists.	The College Executive	—

VERIFIED

Read from the College's own register of instruments. Adoption is an internal act of the authority named; none of these instruments has been approved, endorsed or ratified by any body outside the College, and the register says so on its own face.

The constituted bodies

Five bodies beneath the Commission and the Senate, each with a remit and a body it reports to.

BODY		REMIT	REPORTS TO	STANDING
International Advisory Council IAC		Advises on global education trends, curriculum development, employability, technology, international partnerships, research and educational innovation. It advises; it does not approve. Nothing it says becomes policy without a decision of the Senate or the Commission, and the record names which.	Board of Governors	Established
Educational Innovation Board EIB		Owns AI integration, immersive learning, virtual classrooms, digital laboratories, learning analytics, adaptive assessment and future pedagogy – and owns the obligation to say which of them the College has actually built and which it has only considered.	Institutional Quality Commission	Established
Student Success Office SSO		Coordinates academic advising, learning support, wellbeing, mentoring, careers guidance and alumni support. An office rather than a committee, because a student in difficulty needs a door, not a quorum.	College Executive	Established
Graduate Employability Council GEC		Reviews graduate competencies, employer expectations, workforce trends, industry partnerships, professional skills and curriculum relevance. It publishes no employment statistic until there are careers old enough to have said something.	Institutional Quality Commission	Established
Future Learning Laboratory FLL		An institutional innovation centre for AI-assisted learning, multilingual education, digital assessment, educational technology, immersive learning, virtual reality and next-generation language pedagogy. Its output is evidence about teaching, not features.	Educational Innovation Board	Established

VERIFIED

A body is established when its remit is adopted and it has somewhere to report. It is not established by being named in a prospectus.

IT ADVISES; IT DOES NOT APPROVE

The International Advisory Council is the sharpest case and the reason the column exists. It advises on curriculum, employability, technology and international

partnership, and **nothing it says becomes policy without a decision of the Senate or the Commission** – the record naming which.

An advisory council with approval powers is a second senate nobody voted for. Keeping that line sharp is what makes outside advice worth taking.

THE COMMISSION

A permanent commission rather than a standing committee, because the work it owns does not stop between meetings. It holds academic quality, institutional effectiveness, educational innovation, policy review, curriculum monitoring, learner outcomes and strategic benchmarking, and it is the body every subcommittee below reports through.

THE ONE OFFICE THAT CANNOT BE FILLED FROM INSIDE

Provides independent oversight of academic standards, moderation procedures, assessment quality and award integrity. The office is defined and **unfilled**: no External Examiner has been appointed, and the College does not publish a person into an office they have not accepted.

Quality, and who owns it

Beneath the Institutional Quality Commission sit 7 standing committees, each holding one part of the distance between what the College publishes about itself and what it does.

Curriculum Standards Committee – Holds the curriculum against its own published structure: that every module states its prerequisites, that every lesson carries an outcome, and that the sequence of a level is an argument rather than an ordering.

Assessment Integrity Committee – Owns the distance between a rubric and a mark.

Student Experience Committee – Reads the programme from the learner's side: what a student actually meets, in what order, with what support, and where the programme as published and the programme as met come apart.

Digital Learning Committee – Owns the platform as an academic instrument rather than as software: whether the staging of a lesson teaches, whether the Listening Lab measures what it claims, and whether a learner's record is legible to the learner.

Teaching Excellence Committee – Runs the observation cycle and the development scheme that follows from it, and holds the Teaching Excellence Framework's measures against what teaching actually produced.

Academic Publications Committee – The review gate in front of WEC Press.

Strategic Innovation Committee – Decides which proposed change to the programme is worth the disruption it costs, and records the ones it declines with the reason – so a rejected idea is a decision rather than a silence.

WHERE ATTENTION GOES

Twenty risks, placed

Likelihood against impact. A register is a list; a matrix is a judgement.

WHAT THE PLACEMENT SAYS

A register is a list and a matrix is a judgement. Each cell carries the number of risks placed in it and a hatch proportional to that number; an empty cell is ruled rather than left blank, so that nothing looks forgotten.

The struck gold line encloses the region the Board would actually watch: likely enough to expect, and heavy enough to plan for. What stands inside it is the count the plate closes on.

Every risk overleaf carries an early warning somebody can observe and an owner named in the governance schedule.

10 of 20 stand above the line – likely enough to expect, heavy enough to plan for.

Authored judgement, not computed.

RISKS PLACED	ABOVE THE LINE	WITH AN EARLY WARNING	OWNERS
20	10	20	Named
Every domain of the plan	Likely enough, heavy enough	Something somebody can observe	In the governance schedule

The institutional risk register

Each with an early warning somebody can actually observe.

DOMAIN		RISK	L	I	EARLY WARNING
Enrolment	Acquisition cost rises faster than modelled as the Gulf market matures	Medium		High	Cost per enrolled learner exceeds plan for two consecutive quarters
Concentration	Gulf revenue share becomes a dependency rather than a strength	Medium		High	Any single market exceeds 45 per cent of net tuition
Academic capacity	Instructors cannot be recruited at the pace enrolment demands	Medium		High	Learner-to-instructor ratio exceeds the published teaching allocation for one term
Academic quality	Second-marking divergence rises as the marking body grows	Medium		High	Marker agreement falls below 85 per cent, or reconciliations exceed 8 per cent of scripts
Regulatory	A jurisdiction restricts the marketing of unaccredited qualifications	Medium		Medium	Regulatory correspondence, or a platform advertising rejection citing accreditation
Reputational	A credential is questioned and verification does not satisfy the questioner		Low	High	A verification enquiry escalates to a complaint
Retention	Continuation between levels falls below the modelled rate	Medium		High	Any level's continuation falls 5 points below plan for two cohorts

THE INSTITUTIONAL RISK REGISTER — CONTINUED

DOMAIN		RISK	L	I	EARLY WARNING
Technology	Platform outage during an examination window		Low	High	Any unplanned outage exceeding 15 minutes in a sitting window
Cybersecurity	Learner records or examination papers are exposed		Low	Severe	Any unauthorised access attempt against the registry or paper store

L — likelihood. I — impact.

The institutional risk register

DOMAIN		RISK	L	I	EARLY WARNING
Payments	A gateway suspends the account or holds settlement	Medium	High		Settlement delayed beyond contracted terms, or a rising chargeback rate
Foreign exchange	Currency movement erodes the value of non-USD collections	Medium	Medium		Any currency moves more than 10 per cent against USD within a quarter
Key person	The institution depends on individuals who have not been replaced	High	High		Any published office remains unfilled after two recruitment rounds
Academic authority	The standards board cannot reach quorum and competency mappings stay interim	High	High		Board of Academic Standards membership remains at zero
External validation	No External Examiner is appointed, and accreditation cannot be pursued	High	High		The post remains unfilled into Year 2
Refunds	Refund rate exceeds the modelled level after a cohort's first assessment	Low	Medium		Refunds exceed 4 per cent of gross tuition in any quarter
Partner concentration	A single sponsoring institution becomes a material share of enrolment	Medium	Medium		Any one sponsor exceeds 12 per cent of active learners

THE INSTITUTIONAL RISK REGISTER — CONTINUED

DOMAIN	RISK	L	I	EARLY WARNING
Cost inflation	Instructor compensation rises faster than the tariff	Medium	Medium	Loaded instructor cost rises more than 8 per cent in a year
Content currency	The curriculum ages without a revision cycle	Medium	Medium	Any level goes three years without substantive revision
Expansion	A market opens before the institution can serve it	Medium	Medium	Enquiries from an unopened market exceed 10 per cent of total
Liquidity	A year of falling enrolment meets a cost base that does not fall with it	High	High	Reserve coverage falls below six months of operating cost – which on the Core Plan it does until 2033, by construction, while the reserve is still accumulating

The response to each, and the office that owns it, follow overleaf.

The response, and who owns it

What the College does when a risk lands, and the office accountable for doing it.

RISK	RESPONSE	OWNED BY
Acquisition cost rises faster than modelled as the Gulf market matures	Shift budget weight to sponsored cohorts, where one negotiation carries 25–99 learners at a published band rather than one at a time	Marketing and Partnerships Lead
Gulf revenue share becomes a dependency rather than a strength	The market sequence exists for this reason; Europe opens in Year 2 and Asia in Year 4 specifically to dilute it	Chief Executive
Instructors cannot be recruited at the pace enrolment demands	The model already refuses to enrol beyond capacity; the operational control is a standing recruitment pipeline and a four-month hiring lead	Director of Academic Standards
Second-marking divergence rises as the marking body grows	Every marker is already shown their own agreement and every divergence; the escalation is moderation committee review of that marker's batch	Director of Academic Standards
A jurisdiction restricts the marketing of unaccredited qualifications	The College already states plainly that it holds no third-party accreditation; nothing published needs withdrawal	Finance and Compliance Officer
A credential is questioned and verification does not satisfy the questioner	Every award is signed, hash-chained and publicly checkable without an account; a superseded award still resolves and names its successor	Registrar

THE RESPONSE, AND WHO OWNS IT — CONTINUED

RISK	RESPONSE	OWNED BY
Continuation between levels falls below the modelled rate	Continuation is the single most valuable variable in the model; from Year 4 retention spending outperforms acquisition spending and the budget should move	Chief Executive
Platform outage during an examination window	Sittings carry a published resume allowance; the architecture is serverless with no single origin to lose	Platform Engineer
Learner records or examination papers are exposed	Papers are versioned and released by act; records are access-controlled per learner; signing keys are held separately from the record store	Platform Engineer
A gateway suspends the account or holds settlement	Four gateways are implemented and routed by country; no single processor carries the institution	Finance and Compliance Officer
Currency movement erodes the value of non-USD collections	The tariff is USD-denominated and rates are refreshed against a recorded source rather than assumed	Finance and Compliance Officer
The institution depends on individuals who have not been replaced	Named in the plan rather than hidden: the governance offices are defined and empty, and the platform refuses to publish a person into an office they have not accepted	Board of Governors

THE RESPONSE, AND WHO OWNS IT — CONTINUED

RISK	RESPONSE	OWNED BY
The standards board cannot reach quorum and competency mappings stay interim	This is the single gate standing between the College and its first conferral; it is an appointment, not an engineering task	Board of Governors
No External Examiner is appointed, and accreditation cannot be pursued	The remit is published and the evidence the post would examine is already produced by the platform; the gap is a person	Board of Governors
Refund rate exceeds the modelled level after a cohort's first assessment	The fourteen-day window is deliberately generous and its cost is modelled; a rise signals a placement problem rather than a policy problem	Registrar
A single sponsoring institution becomes a material share of enrolment	Bands are published rather than negotiated, so no sponsor holds pricing leverage; the exposure is volume, not price	Marketing and Partnerships Lead
Instructor compensation rises faster than the tariff	The tariff is reviewed annually against the teaching allocation, and the allocation is published rather than implied	Chief Executive
The curriculum ages without a revision cycle	Institutional development is funded as a share of net tuition rather than from surplus, precisely so it is not the line cut first	Director of Academic Standards

THE RESPONSE, AND WHO OWNS IT — CONTINUED

RISK	RESPONSE	OWNED BY
A market opens before the institution can serve it	The sequence is deliberate and the capacity gate is enforced in the model itself; demand ahead of capacity is recorded as turned away rather than booked	Chief Executive
A year of falling enrolment meets a cost base that does not fall with it	Expected through the ramp rather than tolerated: the reserve is funded from surplus and there is little surplus before the institution turns, so the exposure is met by the founding capital question the Board is asked in Part Five rather than by a reserve that does not yet exist	Board of Governors

An owner is an office, not a person. Several of these offices are defined and unfilled, and the College does not publish a person into an office they have not accepted.

What the College owes a learner in difficulty

Three standings, what puts a learner in each, and the clock that runs against the College while they are.

STANDING	WHAT PUTS A LEARNER IN IT	WHAT THE COLLEGE MUST DO, AND BY WHEN
In Good Standing Access to teaching continues	Nothing. This is the ordinary state.	Nothing beyond the ordinary teaching relationship. This is the state nobody needs to think about, and the College does not manufacture contact to prove it is paying attention.
Under Review Access to teaching continues	Two failed summative attempts within one level; A failed level examination; A review flagged by academic staff, with a recorded reason	Offer a tutorial with a member of academic staff, in writing, within 10 working days of the trigger. State in that offer what triggered the review and what would clear it. Record the offer whether or not the learner takes it, so that a learner who was never reached cannot later be described as one who declined help. Clear the standing when the outstanding assessment is passed or the flag is lifted with a recorded reason.
Suspended Progression Access to teaching continues	An integrity matter opened under the misconduct procedure	Put the allegation to the learner in writing before any finding, and hear the reply. Reach a first-instance decision within 20 working days of opening the matter; the suspension lapses automatically if it does not. Leave every route to appeal open, each stage decided by somebody who was not part of the last one. Continue access to teaching, the library and support throughout.

VERIFIED

The Academic Regulations of Worldwide English College, adopted 2026-08-20 by The Executive of Worldwide English College. Ratification by the Academic Senate is pending, and no body outside the College has approved them.

THE RULE THAT OVERRIDES THE OTHER THREE

No standing removes access to learning. Published, and it overrides every band above. Any future rule that would suspend, expire or withdraw access contradicts this one and cannot be adopted without amending it here first.

And there is no probation band. Probation is a state whose only content is the threat of exclusion. This College excludes nobody, so probation would be a word with nothing behind it, applied to learners already in difficulty.

60 DAYS

Published as the intention: a learner who has gone quiet is contacted in month two rather than discovered in month eleven. It is an obligation on the College and not a standing on the learner, because there is no deadline here to miss and no penalty for a slower route.

120 DAYS

A second automated message is not a second attempt. At four months a member of staff makes contact themselves, and the record says who.

Clocks that run against the College

Every protection on the facing page is an obligation with a deadline attached, and every one of those deadlines is the College's rather than the learner's. That asymmetry is the whole design.

A FINDING HAS TWENTY WORKING DAYS, OR IT LAPSES

An integrity matter suspends progression, and the College must reach a first-instance decision within twenty working days of opening it – **the suspension lapses automatically if it does not**. An institution that can leave a learner suspended indefinitely by simply not deciding has not written a procedure; it has written a power.

AN APPEAL IS HEARD BY SOMEBODY WHO WAS NOT THERE

Every route to appeal stays open and **each stage is decided by somebody who was not part of the last one**. Teaching, the library and support continue throughout – a learner under investigation is still a learner.

AN OFFER IS RECORDED WHETHER OR NOT IT IS TAKEN

A learner Under Review is offered a tutorial in writing within ten working days, and the offer is recorded whether or not they take it, *so that a learner who was never reached cannot later be described as one who declined help*. That sentence is in the regulations because the failure it describes is the ordinary one.

AND SILENCE IS THE COLLEGE'S PROBLEM, NOT THE LEARNER'S

Sixty days without engagement and the College writes. At a hundred and twenty a member of staff makes contact themselves, and the record says who – because a second automated message is not a second attempt.

If exactly one thing goes wrong

One variable of the Core Plan moved at a time, through the same projection the decade is drawn from.

THE SHOCK	WHAT WOULD DETECT IT	TEN-YEAR SURPLUS	AGAINST PLAN	PER 10 POINTS	LEARNERS
Continuation falls ten points at every level	Any level's continuation falls 5 points below plan for two cohorts	\$10.6M	-45%	-\$4.3M	+1,274
Reach comes in a quarter below plan	Enrolled learners fall short of the modelled funnel for two intakes	\$13.6M	-29%	-\$2.2M	-3,453
Continuation falls five points at every level	Any level's continuation falls 5 points below plan for two cohorts	\$14.6M	-24%	-\$4.5M	+740
Acquisition costs a third more than modelled	Cost per enrolled learner exceeds plan for two consecutive quarters	\$15.7M	-18%	-\$1.0M	-125
Reach comes in a tenth below plan	Enrolled learners fall short of the modelled funnel for two intakes	\$17.6M	-8%	-\$1.5M	-978

MODELLED

Ranked by what each costs, worst first. "Per 10 points" restates the same loss per ten points of movement in the variable, because the shocks are not the same size and ranking them without saying so invites the reader to mistake the biggest number for the most sensitive variable. Every case still turns cumulative nil inside the decade.

THE BINDING CONSTRAINT, NAMED

The three cases in Part Five move continuation, reach and the cost of acquisition together, which is how a plan is tested and not how it fails. These move one thing at a time.

Continuation falls ten points at every level is the largest single loss on the table, at -45% of ten-year surplus. Read per ten points of movement – the fifth column, and the only way to compare shocks of different sizes – the most sensitive variable is **continuation falls five points at every level**, at \$4.5M

for every ten points it moves against \$1.0M for the least sensitive. A learner who stops after Level II has cost the whole of the acquisition and returned a sixth of the tuition.

One result is worth reading twice. A fall in continuation *raises* admissions, because the establishment that would have taught the continuing cohort teaches a new one instead – the College ends the decade having enrolled more people and conferred fewer awards. That is the shape of the failure, and it would look like growth in every month it was happening.

WHY NOT A SINGLE NUMBER

Every figure here is the whole decade re-projected, not a sensitivity multiplier applied to a total. A shock changes what the College can teach, which changes what it admits, which changes the establishment it needs — and only running the model again carries that through.

WHAT IS NOT SHOCKED

The tariff. A plan that answers every adverse case by charging more has not tested itself; it has tested the reader's patience.

Reading the register against the model

The register overleaf places twenty risks by likelihood and impact, and says so plainly: it is authored judgement, not computed. Three of those judgements can now be checked against the model, and the table opposite is that check.

RETENTION IS RATED HIGH IMPACT, AND THE MODEL AGREES

A five-point fall in continuation at every level costs 24% of ten-year surplus; ten points costs 45%. The register's early warning — any level's continuation falls 5 points below plan for two cohorts — is set at the level the model says matters.

ACQUISITION IS RATED HIGH, AND THE MODEL RATES IT LOWER

A third more expensive acquisition costs 18%. That is serious and it is not the worst case on the page, and the reason is structural: the institutional channels divide one negotiation across the seats it carries, so the College's exposure to the cost of finding a learner one at a time is smaller than a retail institution's would be.

REACH IS THE EXPOSURE NOBODY HAS RESEARCHED

A quarter below plan costs 29% and 3,453 learners. Reach is the one quantity in this plan built from conversion rates rather than from a published price, and it has no line of its own in the register. **The Board is asked to add one.**

INSTITUTIONAL RESILIENCE

The reserve against a rising target

Accumulated institutional capital, against 9 months of the cost of running the College.

WHY THE TARGET CLIMBS

The College's reserve policy is stated in **months of operating cost** rather than as a share of revenue, and the difference is the whole point of holding a reserve. The thing a reserve has to survive is a year when revenue falls and cost does not – and a reserve set as a percentage of revenue shrinks exactly when it is needed.

So the target is not a number. It is a staircase that climbs with the cost of running the institution, and a year in which the College grows raises the bar its reserve has to clear.

60% of any surplus is contributed to the reserve before anything else is considered. On the Core Plan the target is met in **2035**.

Read in the unit the policy is written in, the reserve covers 0.6 months of operating cost in 2029 and 14.8 at the end of the decade. The register's Liquidity warning trips below 6 months, and the College is inside its own warning band until **2033** – six years in which a year of falling enrolment against a cost base that does not fall with it would have to be met from trading rather than from reserves.

MODELLED

Reserve is accumulated institutional allocation, not cash at bank.

TARGET

9 months

Of operating cost, not of revenue

COVER AT YEAR TEN

14.8 months

8.8 on the Conservative case

CLEARS THE WARNING

2033

The register's 6-month line

TARGET MET

2035

On the Core Plan

DRAWDOWN

A reserve that can be drawn on by the office that caused the shortfall is not a reserve. Drawdown is a decision of the Board of Governors and of no other body.

NOT DISTRIBUTABLE

The Institutional Reserve is restricted or designated capital. It is not income, and no distribution from it is modelled anywhere in this plan.

Financial governance

The financial constitution allocates. Governance decides who may move an allocation, and the answer is deliberately narrow.

WHAT THE BOARD ALONE DECIDES

The published tariff and the partner bands. The annual budget and the acquisition spend. Reserve policy and any drawdown against it. The appointment of the External Examiner. International partnerships. Each of those is a decision the Executive may advise on and may not take.

WHAT THE EXECUTIVE DECIDES

The establishment, instructor compensation and material technology expenditure – the operating decisions that follow from a budget once the Board has set it.

WHAT NEITHER MAY TOUCH

An assessment outcome. Examination papers and rubrics are the Board of Academic Standards' alone, and conferral and withdrawal are the Registrar's. **No commercial authority in this institution can alter an academic decision**, and a commercial relationship that required it would be declined.

WHEN A RISK LANDS

Every risk in the register overleaf carries an early warning somebody can observe and a named office accountable for the response. A risk with a warning and no owner is a paragraph; a risk with an owner and no warning is a hope.

If the College could not continue

The standing teaching obligation, and the year the reserve first covers the whole of it.

YEAR	UNDER INSTRUCTION	A FULL YEAR OF TEACHING	RESERVE HELD	COVERED
2027	34	\$0.0M	\$0.0M	MODELLED
2028	162	\$0.2M	\$0.0M	MODELLED
2029	406	\$0.6M	\$0.1M	MODELLED
2030	786	\$1.2M	\$0.3M	MODELLED

2032	1,946	\$3.1M	\$2.0M	MODELLED
2033	2,887	\$4.6M	\$3.8M	MODELLED
2034	3,619	\$5.9M	\$6.3M	MODELLED
2035	3,756	\$6.3M	\$9.1M	MODELLED
2036	3,756	\$6.3M	\$11.9M	MODELLED

MODELLED

"A full year of teaching" is the delivery cost of every level taught to every learner under instruction in that year. The true teach-out obligation — finishing the level each learner has already begun — is a fraction of it, so this is an upper bound and is stated as one.

THE OBLIGATION NOBODY CAN HAND BACK

A College that closes owes its learners the level they have paid for and begun. That obligation does not negotiate, it cannot be refinanced, and it is the reason this institution holds a reserve at all.

From **2034** the reserve exceeds an entire year of teaching for the whole standing cohort — which is strictly more than a teach-out would cost. Before that year it does not, and the plan says so rather than describing the reserve as protection it has not yet accumulated.

A learner who has begun a level is *taught to the end of it.*

The Board is invited to adopt the standing obligation as a first charge on the Institutional Reserve, ranking ahead of every discretionary use: that a learner under instruction is taught to the end of the level they have begun, that fees taken for a level not yet begun are returned, and that the register of awards remains verifiable by a stranger whatever becomes of the institution that conferred them. On the Core Plan the reserve first exceeds a full year of teaching in 2034, against a standing cohort of 3,756 at year ten.

The Board Charter

The principles the Board is invited to establish, and against which every later decision of the College may be tested.

- 01

One academic standard
- 02

Multiple legitimate routes of access
- 03

Academic standards are protected irrespective of commercial interests
- 04

Conferral is never one person's decision
- 05

The record outlives the relationship
- 06

Tuition reflects the complete educational service
- 07

Teaching hours are not the measure of value
- 08

Institutional quality is funded before anything discrete
- 09

Financial resilience is a standing obligation
- 10

Institutional partnerships are a core channel, not an add-on

Ten principles. They are the terms on which the rest of this document was written, and the terms on which it asks to be judged.

Institutional and academic principles

01 One academic standard

The examination, the rubric, the independent second marking, the moderation, the registry entry and the award are identical on every route, in every market and through every channel.

02 Multiple legitimate routes of access

A learner's circumstances determine how they are taught. They do not determine what their qualification is worth, and the College will not construct a route that implies otherwise.

03 Academic standards are protected irrespective of commercial route

No sponsor, employer, partner or fee level alters an assessment decision. A commercial relationship that required it would be declined.

04 Conferral is never one person's decision

A named marker marks, a second marker marks independently, and the cohort is moderated before any result is released. No single person can confer a WEC-LC level.

05 The record outlives the relationship

Every conferral is entered in the registry on the day it is made and remains publicly verifiable, without an account, for as long as the College exists.

THE BOARD IS INVITED TO ESTABLISH

Commercial and financial principles

01**Tuition reflects the complete educational service**

Tuition funds the whole institutional provision – 12 components, of which live teaching is one – and the College will describe it that way to the people who pay it.

02**Teaching hours are not the measure of value**

Hours are published because the College publishes what it staffs. They are not the product, and the College will not price or market itself by the hour.

03**Institutional quality is funded before anything discretionary**

Academic delivery, assessment, quality assurance and the registry are funded first. Discretionary allocation is what remains after the institution has been paid for, not before.

04**Financial resilience is a standing obligation**

25% of collected revenue is retained as institutional capital as a permanent condition of operating, and is not available as income.

05**Institutional partnerships are a core channel, not an addition**

Employers, universities, ministries and foundations are how the College reaches learners a retail tariff never will, and the architecture is built for them rather than extended to them.

The College will not claim recognition it does not *possess.*

No accreditation, ranking, partnership, validation or endorsement is described in this document or anywhere else unless the College actually holds it, and no person is named in an office they have not accepted. Silence about a thing the College does not hold is acceptable. A claim is not.

STATED AS SUCH

Throughout

The working behind every figure in this book.

The material in the eight parts is the institution’s argument. The material here is the audit trail beneath it: the evidence register, the method, the derivation of the tariff and the full financial schedules. It is placed here so that the argument can be read and so that it can be checked, without either getting in the way of the other.

Evidence register

B

Method and
sources

C

How the tariff is
derived

D

Ten-year schedules

Appendix A · The evidence register

Every priced observation the plan rests on, with its provider, product and standing. Gathered 2026-09-19.

MARKET	OBSERVATIONS	STANDING
Saudi Arabia and the Gulf	British Council Saudi Arabia; British Council Saudi Arabia; British Council Saudi Arabia; British Council Saudi Arabia; British Council United Arab Emirates; Berlitz UAE; Dubai market survey; Wall Street English Saudi Arabia	high, medium, low, n/a
Nigeria and West Africa	PEI Centre, Lagos; British Council Nigeria / IDP; Nigeria market aggregate	high, medium, low
United Kingdom and Europe	University of Sheffield ELTC; University of Chester; University of Chester; University of Oxford Language Centre; University of Stirling	high
Executive and corporate	US corporate language training market; US corporate language training market; Executive coaching market (leadership, not language); Independent business English tutors	medium, low

Source addresses for every observation are held in the College's evidence register and are reproduced on request.

WHAT COUNTS AS EVIDENCE HERE

An observation is a price a named provider publishes for a named product, converted at a stated rate on a stated date. An inference is what the College concludes

from those prices about what a market will pay for something nobody sells.

The two are never merged. Willingness to pay, in this plan, is always an inference – and every figure that rests on one carries the mark that says so.

Appendix B · Method, sources and reconciliation

What each source carries, and what standing it has.

SOURCE	WHAT IT CARRIES	STANDING
The published tariff	The adopted fee, its decomposition, the level structure and the refund window.	VERIFIED
The commercial register	The routes, the independent steps, the partner bands, remission and referral.	VERIFIED
The evidence register	Every priced observation with its provider, local price, hours and source address.	VERIFIED
The Board's framework	The revenue-allocation framework, the market and progression assumptions, and the establishment.	BOARD DECISION REQUIRED
The cost model	Delivery cost hour by hour, the demand model, the channels and the tariff.	MODELLED
The allocation model	The constitution made binding, and the tariff solved from it.	MODELLED
The projection	The ten years, with revenue recognised in the year it is taught.	MODELLED

The reconciliation is re-run on every issue of this document, and the tariff is re-derived from the constitution each time, so a price cannot drift away from its reason.

APPENDIX B · THE MANAGEMENT CHECK

Per hour of individual attention

A management instrument, retained for interrogation. It is not the commercial proposition.

WHY THIS IS IN THE APPENDIX

A pathway total has no comparable, because no provider found sells a six-level credentialed pathway as one purchase. An hour of a qualified teacher’s attention has one everywhere – but not the *same* one. A British Council module is group language teaching; a Bespoke pathway is one-to-one provision, whose market is executive coaching.

This check earns its place: it caught a false commercial claim that a table of six numbers had let through. It is **not** a proposition, and it is not shown to a prospective learner, because a rate per hour tells the market to compare the College against a tutor.

One tier is dearer than the group benchmark on both measures. The College states that rather than a price advantage it does not have.

MODELLED Retained for Board and examiner interrogation.

PUBLISHED BENCHMARK	COACHING BAND	TIERS INSIDE THEIR COMPARABLE	THE EXCEPTION
\$284 British Council Saudi, per attention hour	\$200–600 One-to-one provision	5 of 6 Each judged against the right one	Guided \$420 an attention hour

Appendix C · What each pathway is staffed to deliver

The academic specification behind the five routes, per complete A1–C2 pathway.

PATHWAY	CONTACT	INDIVIDUAL	GROUP	MARKED WORK
Independent	0	0	One to one	0 pieces
Guided	144	0	14 learners	24 pieces
Tutored	192	48	10 learners	60 pieces
Executive, in cohort	228	84	6 learners	60 pieces
Executive, private	240	240	One to one	72 pieces
Executive Bespoke	288	288	One to one	84 pieces

The College publishes what it staffs. These are the hours it commits to, not the hours it sells.

WHY THE SPECIFICATION IS PUBLISHED

An institution that will not say how much teaching a route carries is asking to be trusted on the one thing a learner can actually check. The College publishes the specification so that the difference between its routes is a matter of record rather than of impression.

It does not follow that the hours are the product. Every one of these routes carries the same twelve components opposite, the same examination and the same award. The specification says what the College must staff; it does not say what the learner is buying.

Appendix C · How the tariff is derived

Delivery cost, the contribution floor, and the reference investment for each route.

PATHWAY	DELIVERY COST	FLOOR	REFERENCE	OVER FLOOR
Independent	\$2,144	\$2,800	\$3,600	29%
Guided	\$3,600	\$4,700	\$17,800	279%
Tutored	\$8,147	\$10,600	\$29,000	174%
Executive, in cohort	\$14,868	\$19,350	\$52,400	171%
Executive, private	\$27,439	\$35,650	\$86,100	142%
Executive Bespoke	\$41,115	\$53,450	\$142,250	166%

The floor is delivery cost plus a 30 per cent contribution. The constitution binds the institution rather than each product, so cross-subsidy between routes is deliberate: it is what allows the College to run an access route at all.

Appendix C · How the tariff is derived

Delivery cost, the contribution floor, and the reference investment for each route.

PATHWAY	DELIVERY COST	FLOOR	REFERENCE	OVER FLOOR
Independent	\$2,144	\$2,800	\$3,600	29%
Guided	\$3,600	\$4,700	\$17,800	279%
Tutored	\$8,147	\$10,600	\$29,000	174%
Executive, in cohort	\$14,868	\$19,350	\$52,400	171%
Executive, private	\$27,439	\$35,650	\$86,100	142%
Executive Bespoke	\$41,115	\$53,450	\$142,250	166%

The floor is delivery cost plus a 30 per cent contribution. The constitution binds the institution rather than each product, so cross-subsidy between routes is deliberate: it is what allows the College to run an access route at all.

WHY THE TARIFF IS THE CHEAPEST THAT WORKS

The reference investment is not a preference. It is the cheapest tariff at which the portfolio – sold across 4 regions at 4 price levels and through 6 kinds of payer – still satisfies the financial constitution. Where two tariffs both satisfy it, the College charges the lower one.

The adopted Independent fee is not solved. It is published, and a plan does not reprice a fee the institution has already announced in order to tidy an

internal ratio.

An earlier tariff, solved at one global price, retains 38.3 per cent against a 50% requirement once the regional levels are applied. It would have satisfied its own law on paper and missed it in the bank, and that gap is the whole argument for pricing by region rather than by multiplication.

Appendix C · Three architectures, one basis

The same demand model, delivery costs, acquisition budget and capacity gate. Only the price differs.

ARCHITECTURE	REVENUE	SURPLUS	LEARNERS	HOLDERS
Brief A — \$7,400 / \$14,800	\$52.4M	−\$10.7M	15,262	12,668
Adopted flat \$19,000	\$63.9M	\$5.3M	12,669	10,515
PROPOSED	\$70.5M	\$19.1M	15,375	12,761

Against a single global fee the proposal is ahead on \$6.6M of ten-year revenue, 2,706 admissions, 6,402 qualifications conferred and \$13.8M of retained surplus, and a proposal that is ahead on everything deserves the question a Board should ask of it. A single fee is one number for four markets: it stands above what two of them will pay, so it forfeits the learners, and below what the other two will, so it forfeits the margin. The portfolio does not beat it by charging more. It beats it by charging each market separately. It retains 27.1% of what it collects against 8.3%.

Appendix D · Reach, admissions and standing load

The Core Plan, year by year.

YEAR	REACH	ADMITTED	UNDER INSTRUCTION	AWARDS	TO C2
2027	4.0%	34	34	52	0
2028	11.2%	153	162	257	5
2029	20.3%	366	406	674	24
2030	42.4%	690	786	1,341	58
2031	57.3%	1,083	1,263	2,199	108
2032	73.2%	1,663	1,946	3,396	170
2033	89.0%	2,452	2,887	5,064	260
2034	100.0%	2,978	3,619	6,514	384
2035	100.0%	2,978	3,756	6,956	466
2036	100.0%	2,978	3,756	6,956	466

MODELLED

Reach is the share of the researched reachable population the College addresses in that year, not a headcount. It is capped at one: a College cannot address more of a market than the market contains.

Appendix D · Cost, surplus and reserve

The Core Plan, year by year.

YEAR	DELIVERY	ACQUISITION	FIXED	SURPLUS	RESERVE
2027	\$0.0M	\$0.0M	\$0.4M	−\$0.3M	\$0.0M
2028	\$0.2M	\$0.1M	\$0.6M	−\$0.3M	\$0.0M
2029	\$0.6M	\$0.3M	\$0.6M	\$0.1M	\$0.1M
2030	\$1.2M	\$0.4M	\$0.6M	\$0.5M	\$0.3M
2031	\$2.0M	\$0.7M	\$0.6M	\$1.0M	\$0.9M
2032	\$3.1M	\$1.1M	\$0.6M	\$1.8M	\$2.0M
2033	\$4.6M	\$1.6M	\$0.6M	\$3.0M	\$3.8M
2034	\$5.9M	\$1.9M	\$0.6M	\$4.2M	\$6.3M
2035	\$6.3M	\$1.9M	\$0.6M	\$4.6M	\$9.1M
2036	\$6.3M	\$1.9M	\$0.6M	\$4.6M	\$11.9M

MODELLED

Reserve is the accumulated institutional allocation, not cash at bank.

A planning instrument, and not a record of trading.

Every financial figure in this publication is a projection computed from stated assumptions, and every claim carries its standing.

VERIFIED	The College holds it, and it is published.
MODELLED	This plan asserts it, from stated assumptions.
BOARD DECISION REQUIRED	Nobody has decided it yet.

The College claims no accreditation, ranking, partnership or endorsement it does not hold, and names no person in an office they have not accepted.
