

WORLDWIDE ENGLISH COLLEGE  
LONDON CAMPUS

# Ten-Year Institutional Roadmap

*Strategic and Financial Master Plan*

2027–2036

EDITION

First · Revision 0

CLASSIFICATION

Confidential — Institutional

BASIS OF MODEL

Adopted tariff, \$19,000

## Executive Summary

*The institutional thesis, the decade it implies, and the two things that are not engineering problems.*

WorldWide English College teaches a **1,200-hour** qualification pathway in six levels from A1 to C2, at an adopted tariff of **\$19,000** — \$3,166.67 a level, \$15.83 an academic hour. This plan models what that institution becomes over 10 years, and it is built forwards from what the College spends to be found and whom it can actually teach, rather than backwards from a revenue the plan would like to reach.

**\$95.51M**

TEN-YEAR GROSS REVENUE  
*Core Management Plan, proposed architecture*

**\$17.40M**

YEAR-10 REVENUE

**3,851**

ACTIVE LEARNERS, YEAR 10  
*3,053 new in the year*

**39,164**

LEVEL AWARDS CONFERRED OVER  
THE DECADE  
*14,828 award-holders, 2,318 of them to C2*

**\$37.43M**

TEN-YEAR OPERATING SURPLUS  
*39% of revenue*

**2029**

FIRST SURPLUS YEAR  
*Cumulative surplus from 2029*

### The thesis, in one paragraph

The College sells teaching, not a credential. The credential is identical whichever route a candidate takes to it — same examination, same rubric published before the work, same second marking, same moderation, same registry entry, same public verification — and the routes differ in price by a factor of five because what they differ in is *human attention*. That single commitment is what makes a \$19,000 tariff defensible and a \$600 independent route honest at the same time, and it is the reason 36% of every fee is allocated to a named instructor. This model staffs to that allocation rather than beneath it.

### The seven findings a board should take from this plan

**One.** *On the adopted flat \$19,000 tariff*, the institution breaks even in **2029**, at 475 active learners, and clears it in every subsequent year of the expected case. It does not require a step change in enrolment to become self-funding; it requires the third year.

**Two.** Continuation between levels, not acquisition, is the decisive variable. A ten-point fall in continuation costs more over the decade than a thirty per cent rise in the cost of acquiring a learner. From Year 4 the marginal pound is better spent keeping a learner than finding one.

**Three. Management proposes a new commercial architecture** **BOARD DECISION REQUIRED**, built from delivery cost upward rather than adjusted from an existing figure: a Directed pathway at \$17,100, Tutored at \$27,900, and Executive tiers at \$50,400, \$82,800 and \$136,800. Against the adopted flat tariff it earns \$15.06M more revenue and confers 14% more awards, for \$-28.82M less surplus. Against the brief's \$7,400 / \$14,800 it earns \$47.57M more surplus at 56% of its scale. Section 15 to Section 18 set out the whole analysis.

**Four. The plan this one replaces did not survive contact with published prices.** An earlier draft proposed a dearer tariff on \$61.60M of revenue and \$14.10M of surplus, using willingness-to-pay figures that were asserted. Researched against 20 published tariffs from 16 identifiable sources, every segment came in lower — West Africa by two thirds. The withdrawn plan is recorded rather than quietly replaced, and Section 15 states what was found, including the 5 markets and questions the research could not answer.

**Five. The Directed price is the output of a constraint the Board is asked to set, not a number management picked.** A buyer priced out of tuition does not leave — they step down to the Independent route and sit the same examinations untaught, so surplus can always be bought by teaching fewer of the people the College credentials. Management proposes that WEC-LC teach at least 60% of them; the price that follows is \$17,100. Move the constraint and the price moves with it. **BOARD DECISION REQUIRED**

**Six. The reserve rule in Section 07 is not met at any price tested, inside ten years.** The Core case closes the decade holding \$22.59M against a target near \$7.21M. This is not solved by charging more. It requires a founding capital contribution, a longer horizon to full reserve, or a lower target, and the plan puts all three to the Board rather than choosing one.

BOARD DECISION REQUIRED

**Seven.** The two things standing between this College and its first conferred award are not engineering. The Board of Academic Standards has no appointed members and cannot approve the competency mappings; no External Examiner has been appointed. Both are appointments. Every surface that would carry those names already exists and already renders, and the platform refuses to publish a person into an office they have not accepted.

---

This document is a planning instrument. Every financial figure in it is a projection computed from stated assumptions, and none of it is a record of trading. Classifications are printed beside the figures throughout: **VERIFIED** for what the College has adopted and published,

**MODELLED ASSUMPTION** for what this plan asserts, **BOARD DECISION REQUIRED** for what nobody has yet decided.

# 01

## Institutional Identity

*What the College is, what it sells, and the discipline that makes both statements checkable.*

**6**

LEVELS, A1 TO C2

**1,200**

ACADEMIC HOURS

**120**

CREDITS

An institution is what it can be held to. This section states what WEC-LC holds, and — with the same prominence — what it does not.

### What the College holds

A six-level qualification pathway of 1,200 academic hours and 120 credits, mapped level by level to the Common European Framework. A published tariff decomposed to the cent. A published set of academic, assessment, conduct and complaints regulations. A registry in which every award is signed, hash-chained to the one before it, and verifiable by a stranger with no account. A bilingual edition of every published surface, held in parity by a test rather than by intention.

### What the College does not hold, stated here rather than left to be discovered

No third-party accreditation. No ranking. No institutional partnership. No appointed External Examiner. No completed cohort. The College says so where a reader asks and does not gesture at any of it elsewhere. A ten-year plan that blurred this would be worth less than one that states it on its second page.

FIGURE 1

#### The qualification ladder

data/tuition.json. VERIFIED. The teaching line is the largest and it is a person, not a platform.

03

Delivery and Commercial Architecture

Three routes to one credential, and why they may differ in price by a factor of five and still be honest.

You pay for what the College does for you. You never pay for the credential itself, and the credential is the same whichever route you take to it.

TABLE 3

The three routes

All verified and published

| ROUTE       | WHAT IT BUYS                                                                                                                                           | PER LEVEL                                          | FULL PATHWAY |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|--------------|
| Enrolled    | A named instructor, written feedback on every produced piece, tutorials on request, the platform, assessment, conferral and the record                 | \$3,166.67                                         | \$19,000     |
| Independent | Access to the level in the platform (\$150), the examination with second marking and moderation (\$250), and conferral with the registry entry (\$200) | \$600                                              | \$3,600      |
| Sponsored   | Enrolled tuition at a published volume band — never a negotiated rate                                                                                  | 10–24: 10% off<br>25–99: 15% off<br>100–∞: 20% off | —            |

data/commercial.json. VERIFIED. The bands are published, so an institution that asks for a price gets the same answer as one that does not know to ask.

Why the independent fee is not the enrolled cost-share

The tariff allocates 15% of a level fee — \$475.00 — to assessment and marking, while the independent assessment step is \$250. That is not a discount and not an inconsistency: the two buy different things. The enrolled line covers ten module quizzes, ten assignments marked with written feedback by a person, the level examination and its second marking. The independent fee covers the examination, its second marking and its internal moderation. Marking ten assignments with feedback is teaching, and it is priced where teaching is priced.

What this means for the model

An independent candidate consumes assessment capacity and no instructor. A sponsored learner consumes an instructor exactly as an enrolled one does, at a banded price. The model tracks the two populations separately from end to end — conflating them is what produces a plan that hires instructors for people who never asked for one.

04

Global Market Strategy

Four markets, entered in sequence, and the cost of being found in each.

4

MARKETS

Y1–Y4

SEQUENCED ENTRY

\$751

BLENDED COST PER LEARNER, Y10

An institution with one platform and a finite faculty cannot open four markets in its first year and serve any of them well. The sequence is a strategic choice, not a constraint.

TABLE 4

The market sequence

Cost of acquisition and route mix, by market

| MARKET                         | OPENS  | COST PER ENROLLED LEARNER | ENROLLED | INDEPENDENT | SPONSORED |
|--------------------------------|--------|---------------------------|----------|-------------|-----------|
| Saudi Arabia and the Gulf      | Year 1 | \$1,450                   | 46%      | 10%         | 44%       |
| Nigeria and West Africa        | Year 1 | \$420                     | 34%      | 58%         | 8%        |
| United Kingdom and Europe      | Year 2 | \$980                     | 62%      | 26%         | 12%       |
| Asia and the rest of the world | Year 4 | \$610                     | 41%      | 47%         | 12%       |

data/masterplan.json § market. MODELLED ASSUMPTION — no market-share claim is made or implied.

The Gulf carries the highest acquisition cost because the sale is longest and most personal, and the highest sponsored share because an employer or ministry buying for a cohort is the natural shape of that market. West Africa carries the lowest cost because reach is cheaper and the qualification is already understood, and the highest independent share because a candidate who wants the credential without the teaching is a larger part of that population.

FIGURE 2

The acquisition funnel

Year 10, expected case — every stage between a stranger and a matriculated learner

WEC-LC Financial Model § Funnel. Stage rates are MODELLED ASSUMPTIONS.

The chain is stated stage by stage rather than as one blended conversion figure, because a blended figure hides the stage that is actually failing and cannot be managed.

# The Economic Engine

How WEC-LC converts academic capacity into sustainable institutional growth.

|                      |          |                      |
|----------------------|----------|----------------------|
| \$84.91M             | \$15.88M | 2,071                |
| TEN-YEAR NET TUITION | YEAR 10  | ACTIVE LEARNERS, Y10 |

The model runs forwards and is constrained twice — by what the College spends to be found, and by whom it can actually teach. It is therefore impossible to improve the headline without spending more, hiring more, or keeping more learners.

FIGURE 3  
Ten-year revenue trajectory

Ten-year net tuition, \$84.91M, allocated in full

WEC-LC Financial Model § Allocation. Reconciles to 100 per cent by construction.

TABLE 6

## The allocation framework

Where every dollar of net tuition goes across the decade

| CATEGORY                                              | SHARE | TEN-YEAR AMOUNT | GOVERNING AUTHORITY |
|-------------------------------------------------------|-------|-----------------|---------------------|
| Academic delivery and instruction                     | 36.9% | \$31,358,360    | College Executive   |
| Student acquisition and admissions                    | 18.7% | \$15,880,000    | College Executive   |
| Academic administration and establishment             | 11.7% | \$9,943,780     | College Executive   |
| Platform, infrastructure and security                 | 1.4%  | \$1,208,701     | College Executive   |
| Institutional operations and compliance               | 1.7%  | \$1,477,224     | College Executive   |
| Publishing, examination and institutional development | 5.9%  | \$5,012,191     | Academic Senate     |

| CATEGORY                          | SHARE         | TEN-YEAR AMOUNT     | GOVERNING AUTHORITY |
|-----------------------------------|---------------|---------------------|---------------------|
| Reserve and institutional capital | 23.6%         | \$20,032,289        | Board of Governors  |
| <b>TOTAL</b>                      | <b>100.0%</b> | <b>\$84,912,545</b> | —                   |

WEC-LC Financial Model § Allocation.

Instruction takes 36.9% of net tuition across the decade, against the 36% the published tariff allocates to teaching. That agreement is not a coincidence: the model derives how many learners one instructor carries *from* the published allocation, so the establishment cannot drift away from what the fee says it buys. An earlier draft asserted a larger caseload and spent 19 per cent — which would have been selling supervision at 36% and staffing it at nineteen.

# Liquidity and Reserves

What the College keeps, and the rule it keeps it by.

\$12.60M

CLOSING RESERVE

14 mo

OPERATING COST COVERED

9 mo

TARGET

The target is stated in months of operating cost rather than as a share of revenue, because the thing a reserve has to survive is a year when revenue falls and cost does not. A share-of-revenue reserve shrinks exactly when it is needed.

FIGURE 7  
Reserve accumulation against the months-of-cost target

WEC-LC Financial Model § Reserves.

TABLE 7  
The reserve schedule

Expected case

| Year | Net Tuition  | Total Cost   | Surplus     | Contribution | Closing Reserve | Months of Cost |
|------|--------------|--------------|-------------|--------------|-----------------|----------------|
| 2027 | \$578,624    | \$1,099,384  | \$-520,759  | \$-520,759   | \$0             | 0.0            |
| 2028 | \$1,696,671  | \$2,151,138  | \$-454,467  | \$-454,467   | \$0             | 0.0            |
| 2029 | \$3,331,940  | \$3,301,079  | \$30,861    | \$18,517     | \$18,517        | 0.1            |
| 2030 | \$5,436,216  | \$4,706,750  | \$729,466   | \$437,680    | \$456,197       | 1.2            |
| 2031 | \$7,695,577  | \$6,141,561  | \$1,554,017 | \$932,410    | \$1,388,607     | 2.7            |
| 2032 | \$9,921,326  | \$7,554,355  | \$2,366,971 | \$1,420,183  | \$2,808,789     | 4.5            |
| 2033 | \$11,907,058 | \$8,710,950  | \$3,196,107 | \$1,917,664  | \$4,726,454     | 6.5            |
| 2034 | \$13,582,521 | \$9,752,942  | \$3,829,579 | \$2,297,747  | \$7,024,201     | 8.6            |
| 2035 | \$14,877,742 | \$10,474,340 | \$4,403,403 | \$2,642,042  | \$9,666,242     | 11.1           |
| 2036 | \$15,884,870 | \$10,987,757 | \$4,897,113 | \$2,938,268  | \$12,604,510    | 13.8           |

WEC-LC Financial Model § Reserves. Nothing is labelled a reserve that the model does not retain.

# Access, Remission and Referral

Scholarship modelled as money rather than written as language.

The College already operates a remission fund of 5% of tuition **VERIFIED** and a referral credit of \$250 that is never paid as cash. This plan models the cost of both rather than describing them.

TABLE 8  
The effect of access provision on tuition  
Ten years, expected case

| LINE                                                   | TEN-YEAR AMOUNT | SHARE OF GROSS |
|--------------------------------------------------------|-----------------|----------------|
| Gross tuition                                          | \$91,500,589    | 100.0%         |
| less Refunds — fourteen-day window, no reason required | (\$2,013,012)   | 2.2%           |
| less Fee remission — the published scholarship fund    | (\$4,575,029)   | 5.0%           |
| NET ACADEMIC REVENUE                                   | \$84,912,545    | 92.8%          |

WEC-LC Financial Model. Remission is a real cost carried before surplus, not a marketing line.

Over the decade the College remits **\$4.58M** in fee remission — money it does not collect, from learners it teaches anyway. That figure is modelled at the published rate rather than chosen, and it is presented here as a cost because that is what it is.

# Sponsored Cohorts and the Executive Market

Where one negotiation carries a cohort, and why the band is published rather than negotiated.

A sponsoring institution — an employer, a ministry, a professional body — is the natural shape of the Gulf market and the single highest-leverage commercial act available to the College.

TABLE 9  
Sponsored cohort economics  
At the published bands, per cohort, full pathway

| COHORT SIZE | BAND | PER LEARNER | COHORT VALUE | INSTRUCTORS REQUIRED |
|-------------|------|-------------|--------------|----------------------|
| 10          | 10%  | \$17,100    | \$171,000    | 1                    |
| 25          | 15%  | \$16,150    | \$403,750    | 1                    |
| 50          | 15%  | \$16,150    | \$807,500    | 2                    |
| 100         | 20%  | \$15,200    | \$1,520,000  | 4                    |
| 250         | 20%  | \$15,200    | \$3,800,000  | 10                   |
| 500         | 20%  | \$15,200    | \$7,600,000  | 20                   |

data/commercial.json § partner bands (VERIFIED) applied to the adopted tariff. Cohort values are illustrative of the published bands, not booked business.

The bands are published. An institution that asks for a price gets the same answer as one that does not know to ask, and no sponsor holds pricing leverage over the College. The exposure a sponsored cohort creates is volume concentration, not price — which is why the risk register carries a ceiling on any single sponsor's share of active learners.

## The Executive tier

**BOARD DECISION REQUIRED** The College has not adopted a bespoke executive tier, and this plan does not invent a price for one. What it does model is the sponsored band, which is the adopted mechanism for cohort purchasing. A separate executive proposition — concierge scheduling, compressed delivery, individual tutorial loading above the published allocation — is a coherent strategic option and would require its own tariff, its own teaching allocation and a Board decision. It is named here so that its absence is deliberate rather than an oversight.

# Technology, Establishment and Staffing

What it costs to run the institution, and who is actually employed to do it.

Every post below is a real post with a real salary, hired against a threshold rather than as a percentage of revenue.

TABLE 10

The establishment

Expected case, selected years

| POST                                               | FROM   | ONE PER        | Y1 | Y5 | Y10 |
|----------------------------------------------------|--------|----------------|----|----|-----|
| Registrar                                          | Year 1 | institution    | 1  | 1  | 1   |
| Admissions officer                                 | Year 1 | 350 learners   | 1  | 4  | 6   |
| Director of Academic Standards                     | Year 2 | institution    | 0  | 1  | 1   |
| Examinations officer                               | Year 2 | 800 learners   | 0  | 2  | 3   |
| Student support officer                            | Year 1 | 420 learners   | 1  | 3  | 5   |
| Finance and compliance officer                     | Year 2 | institution    | 0  | 1  | 1   |
| Platform engineer                                  | Year 1 | 1,200 learners | 1  | 1  | 2   |
| Marketing and partnerships lead                    | Year 1 | institution    | 1  | 1  | 1   |
| Instructors (derived from the teaching allocation) | Year 1 | 25.9 learners  | 4  | 39 | 75  |

WEC-LC Financial Model § Establishment. Salaries are MODELLED ASSUMPTIONS.

TABLE 11

Operating cost architecture

Ten-year totals, expected case

| CATEGORY                  | BASIS                                                                        | TEN-YEAR TOTAL | SHARE OF NET TUITION |
|---------------------------|------------------------------------------------------------------------------|----------------|----------------------|
| Instruction               | 25.9 learners per instructor, derived from the published teaching allocation | \$31,358,360   | 36.9%                |
| Student acquisition       | Budget set per year, divided by cost per learner by market                   | \$15,880,000   | 18.7%                |
| Establishment             | Named posts against enrolment thresholds                                     | \$9,943,780    | 11.7%                |
| Technology                | \$74,000 floor plus \$41 per active learner                                  | \$1,208,701    | 1.4%                 |
| Operations and compliance | \$118,000 floor plus \$26 per active learner                                 | \$1,477,224    | 1.7%                 |
| Institutional development | 5.5% of net tuition, plus the External Examiner from Year 2                  | \$5,012,191    | 5.9%                 |
| TOTAL COST                | —                                                                            | \$64,880,256   | 76.4%                |

WEC-LC Financial Model.

Institutional development is funded as a share of net tuition rather than from surplus. A line funded from surplus is a line that is cut in the year it is most needed, and this one pays for publishing, the External Examiner, accreditation work and curriculum revision.

# 11

## Governance and Authority

*Who decides what, and the separations that protect a learner.*

Academic judgement, commercial authority and financial control are held apart. No individual, including the Founder, may independently determine academic standards, approve their own work, or override established procedure.

TABLE 12

### The schedule of authority

*Who approves, who is consulted, and how often*

| DECISION                                  | APPROVES                    | CONSULTED / RESERVED               | CYCLE                                   |
|-------------------------------------------|-----------------------------|------------------------------------|-----------------------------------------|
| Tuition and the published tariff          | Board of Governors          | College Executive                  | Annual, against the teaching allocation |
| Fee remission and hardship awards         | Academic Senate             | Registrar                          | Each round, against published criteria  |
| Partner and sponsor bands                 | Board of Governors          | Marketing and Partnerships Lead    | Published; not negotiable case by case  |
| New qualifications and levels             | Academic Senate             | Board of Academic Standards        | On proposal                             |
| Examination papers and rubrics            | Board of Academic Standards | Registrar                          | Each sitting, published before the work |
| Conferral of an award                     | Registrar                   | Academic Senate                    | On eligibility, with no override        |
| Withdrawal or replacement of an award     | Registrar                   | Board of Governors                 | On reasoned application                 |
| Annual budget and acquisition spend       | Board of Governors          | Chief Executive                    | Annual                                  |
| Material technology expenditure           | College Executive           | Board of Governors above threshold | On proposal                             |
| Instructor compensation and establishment | College Executive           | Board of Governors                 | Annual                                  |
| Appointment of the External Examiner      | Board of Governors          | Academic Senate                    | On vacancy                              |
| International partnerships                | Board of Governors          | Academic Senate for academic terms | On proposal                             |
| Reserve policy and drawdown               | Board of Governors          | —                                  | Annual, and on any drawdown             |

Published governance instrument, /governance/. The offices named are defined; several are not yet filled — see Section 12.

**BOARD DECISION REQUIRED** The Board of Academic Standards currently has no appointed members. Until it does, competency mappings remain interim and no award can be conferred, because the platform will not confer against an unapproved mapping. This is stated in the risk register as the highest-impact open item in the plan, and it is an appointment rather than a piece of work.

# Institutional Risk Register

Twenty risks, each with an early warning somebody can actually observe.

20

RISKS CARRIED

4

RATED HIGH LIKELIHOOD

1

RATED SEVERE IMPACT

A register of generic risks is a register nobody reads twice. Each entry below names the measurement that would tell the College it is happening.

TABLE 13

The register

| CATEGORY            | RISK                                                                         | LIKELIHOOD | IMPACT | EARLY WARNING                                                                             | MITIGATION                                                                                                                                                             | OWNER                           |
|---------------------|------------------------------------------------------------------------------|------------|--------|-------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| Enrolment           | Acquisition cost rises faster than modelled as the Gulf market matures       | Medium     | High   | Cost per enrolled learner exceeds plan for two consecutive quarters                       | Shift budget weight to sponsored cohorts, where one negotiation carries 25–99 learners at a published band rather than one at a time                                   | Marketing and Partnerships Lead |
| Concentration       | Gulf revenue share becomes a dependency rather than a strength               | Medium     | High   | Any single market exceeds 45 per cent of net tuition                                      | The market sequence exists for this reason; Europe opens in Year 2 and Asia in Year 4 specifically to dilute it                                                        | Chief Executive                 |
| Academic capacity   | Instructors cannot be recruited at the pace enrolment demands                | Medium     | High   | Learner-to-instructor ratio exceeds the published teaching allocation for one term        | The model already refuses to enrol beyond capacity; the operational control is a standing recruitment pipeline and a four-month hiring lead                            | Director of Academic Standards  |
| Academic quality    | Second-marking divergence rises as the marking body grows                    | Medium     | High   | Marker agreement falls below 85 per cent, or reconciliations exceed 8 per cent of scripts | Every marker is already shown their own agreement and every divergence; the escalation is moderation committee review of that marker's batch                           | Director of Academic Standards  |
| Regulatory          | A jurisdiction restricts the marketing of unaccredited qualifications        | Medium     | Medium | Regulatory correspondence, or a platform advertising rejection citing accreditation       | The College already states plainly that it holds no third-party accreditation; nothing published needs withdrawal                                                      | Finance and Compliance Officer  |
| Reputational        | A credential is questioned and verification does not satisfy the questioner  | Low        | High   | A verification enquiry escalates to a complaint                                           | Every award is signed, hash-chained and publicly checkable without an account; a superseded award still resolves and names its successor                               | Registrar                       |
| Retention           | Continuation between levels falls below the modelled rate                    | Medium     | High   | Any level's continuation falls 5 points below plan for two cohorts                        | Continuation is the single most valuable variable in the model; from Year 4 retention spending outperforms acquisition spending and the budget should move             | Chief Executive                 |
| Technology          | Platform outage during an examination window                                 | Low        | High   | Any unplanned outage exceeding 15 minutes in a sitting window                             | Sittings carry a published resume allowance; the architecture is serverless with no single origin to lose                                                              | Platform Engineer               |
| Cybersecurity       | Learner records or examination papers are exposed                            | Low        | Severe | Any unauthorised access attempt against the registry or paper store                       | Papers are versioned and released by act; records are access-controlled per learner; signing keys are held separately from the record store                            | Platform Engineer               |
| Payments            | A gateway suspends the account or holds settlement                           | Medium     | High   | Settlement delayed beyond contracted terms, or a rising chargeback rate                   | Four gateways are implemented and routed by country; no single processor carries the institution                                                                       | Finance and Compliance Officer  |
| Foreign exchange    | Currency movement erodes the value of non-USD collections                    | Medium     | Medium | Any currency moves more than 10 per cent against USD within a quarter                     | The tariff is USD-denominated and rates are refreshed against a recorded source rather than assumed                                                                    | Finance and Compliance Officer  |
| Key person          | The institution depends on individuals who have not been replaced            | High       | High   | Any published office remains unfilled after two recruitment rounds                        | Named in the plan rather than hidden: the governance offices are defined and empty, and the platform refuses to publish a person into an office they have not accepted | Board of Governors              |
| Academic authority  | The standards board cannot reach quorum and competency mappings stay interim | High       | High   | Board of Academic Standards membership remains at zero                                    | This is the single gate standing between the College and its first conferral; it is an appointment, not an engineering task                                            | Board of Governors              |
| External validation | No External Examiner is appointed, and accreditation cannot be pursued       | High       | High   | The post remains unfilled into Year 2                                                     | The remit is published and the evidence the post would examine is already produced by the platform; the gap is a person                                                | Board of Governors              |
| Refunds             | Refund rate exceeds the modelled level after a cohort's first assessment     | Low        | Medium | Refunds exceed 4 per cent of gross tuition in any quarter                                 | The fourteen-day window is deliberately generous and its cost is modelled; a rise signals a placement problem rather than a policy problem                             | Registrar                       |

| CATEGORY              | RISK                                                                     | LIKELIHOOD | IMPACT | EARLY WARNING                                                 | MITIGATION                                                                                                                                               | OWNER                           |
|-----------------------|--------------------------------------------------------------------------|------------|--------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| Partner concentration | A single sponsoring institution becomes a material share of enrolment    | Medium     | Medium | Any one sponsor exceeds 12 per cent of active learners        | Bands are published rather than negotiated, so no sponsor holds pricing leverage; the exposure is volume, not price                                      | Marketing and Partnerships Lead |
| Cost inflation        | Instructor compensation rises faster than the tariff                     | Medium     | Medium | Loaded instructor cost rises more than 8 per cent in a year   | The tariff is reviewed annually against the teaching allocation, and the allocation is published rather than implied                                     | Chief Executive                 |
| Content currency      | The curriculum ages without a revision cycle                             | Medium     | Medium | Any level goes three years without substantive revision       | Institutional development is funded as a share of net tuition rather than from surplus, precisely so it is not the line cut first                        | Director of Academic Standards  |
| Expansion             | A market opens before the institution can serve it                       | Medium     | Medium | Enquiries from an unopened market exceed 10 per cent of total | The sequence is deliberate and the capacity gate is enforced in the model itself; demand ahead of capacity is recorded as turned away rather than booked | Chief Executive                 |
| Liquidity             | A year of falling enrolment meets a cost base that does not fall with it | Low        | High   | Reserve coverage falls below six months of operating cost     | The reserve target is stated in months of cost rather than as a share of revenue, because a share-of-revenue reserve shrinks exactly when it is needed   | Board of Governors              |

Authored for this plan. MODELLED ASSESSMENT — likelihood and impact are judgements, not measurements.

# 13

## The Ten-Year Roadmap

*Five phases, and what has to be true at the end of each.*

The phases are derived from what the model actually produces, not chosen and then illustrated.

### I

#### Foundation YEARS 1–2

Open the Gulf and West Africa. Appoint the academic offices. Publish the first examination papers and confer the first awards. Prove the qualification end to end before spending to be known.

**262 active learners · \$1.70M net tuition**

### II

#### Validation YEARS 3–4

Europe opens. Break-even is cleared and the reserve begins. Continuation, not acquisition, becomes the measure that matters. The External Examiner confirms the standard against published rubrics.

**breaks even 2029 · \$5.44M net tuition**

### III

#### Scale YEARS 5–7

Asia opens. Sponsored cohorts become a material and deliberate share of enrolment. The establishment is fully staffed and the institution stops depending on any one person.

**1,592 active learners · \$11.91M net tuition**

### IV

#### Maturity YEARS 8–9

Reserve reaches its target in months of operating cost. Accreditation is pursued with a completed cohort and an examiner's confirmation behind it, not before.

**reserve \$9.67M · 11 months of cost**

### V

#### Standing YEARS 10

The institution is self-funding, externally examined, internationally enrolled, and holds a register of awards a stranger can check without an account.

**\$15.88M net tuition · 44,392 awards conferred to date**

TABLE 14

#### The ten-year scorecard

*Expected case. Every figure a TARGET, not an actual.*

| MEASURE                        | Y1        | Y3          | Y5          | Y7           | Y10          |
|--------------------------------|-----------|-------------|-------------|--------------|--------------|
| Active learners                | 106       | 479         | 1,058       | 1,592        | 2,071        |
| Paid enrolments in year        | 240       | 934         | 1,972       | 2,886        | 3,676        |
| Instructors                    | 4         | 18          | 39          | 58           | 75           |
| Awards conferred in year       | 313       | 1,709       | 3,988       | 6,230        | 8,342        |
| Net tuition                    | \$578,624 | \$3,331,940 | \$7,695,577 | \$11,907,058 | \$15,884,870 |
| Operating margin               | -90.0%    | 0.9%        | 20.2%       | 26.8%        | 30.8%        |
| Cost per acquired learner      | \$751     | \$814       | \$771       | \$755        | \$751        |
| Net tuition per active learner | \$5,484   | \$6,954     | \$7,273     | \$7,478      | \$7,670      |
| Reserve, months of cost        | 0.0       | 0.1         | 2.7         | 6.5          | 13.8         |

WEC-LC Financial Model § Expected. TARGET figures throughout — the College has no trading history against which any of these could be an actual.

# Break-even and Sensitivity

What has to be true, and what happens when one thing is not.

## Break-even

Learners the year needs against learners the plan produces

WEC-LC Financial Model § Break-even. Fixed cost is everything that does not move with one more learner.

TABLE 15

## Break-even by year

Expected case

| YEAR | FIXED COST   | CONTRIBUTION PER LEARNER | BREAK-EVEN LEARNERS | PLAN PRODUCES | CLEARs |
|------|--------------|--------------------------|---------------------|---------------|--------|
| 2027 | \$1,092,282  | \$5,392.00               | 203                 | 106           | no     |
| 2028 | \$2,133,584  | \$6,409.00               | 333                 | 262           | no     |
| 2029 | \$3,268,986  | \$6,889.00               | 475                 | 479           | yes    |
| 2030 | \$4,655,562  | \$7,048.00               | 661                 | 764           | yes    |
| 2031 | \$6,070,675  | \$7,207.00               | 843                 | 1,058         | yes    |
| 2032 | \$7,464,240  | \$7,309.00               | 1,022               | 1,345         | yes    |
| 2033 | \$8,604,286  | \$7,412.00               | 1,161               | 1,592         | yes    |
| 2034 | \$9,632,141  | \$7,466.00               | 1,291               | 1,803         | yes    |
| 2035 | \$10,343,556 | \$7,555.00               | 1,370               | 1,952         | yes    |
| 2036 | \$10,849,000 | \$7,603.00               | 1,427               | 2,071         | yes    |

WEC-LC Financial Model § Break-even.

FIGURE 9

Sensitivity

Single-variable shocks against the expected case, ten-year net tuition

WEC-LC Financial Model § Sensitivity. Each shock is applied alone so one effect can be read without another moving underneath it.

The tornado carries the finding that should change how the budget is set. **Enrolment 20% below plan** is the largest single exposure in the plan. Continuation — whether a learner who finishes a level begins the next one — moves the decade more than the cost of acquiring a learner does, which is why the roadmap turns the budget toward retention from Phase II.

15

Market Validation

What comparable programmes actually charge, and what that did to the previous plan.

|                              |                                |                                 |
|------------------------------|--------------------------------|---------------------------------|
| 20                           | 16                             | 5                               |
| PRICED OBSERVATIONS RECORDED | IDENTIFIABLE PUBLISHED SOURCES | MARKETS LEFT MARKED AS MODELLED |

An earlier draft of this plan proposed a tariff built on willingness-to-pay figures that were *asserted*. This section tests them against published prices. It is placed before the pricing decision rather than after it because that is the order the work was done in, and because a validation section that follows a price is a defence of it.

MODELLED ASSUMPTION

Every observation below is recorded in `data/market-evidence.json` with its provider, its local price, the hours it buys, the date it was gathered and its source address. Prices were converted at the rates stated in that file. Nothing about the outside world is typed into this publication.

The finding that must be stated first

This is the honest centre of the problem. No provider found sells a six-level, 1,200-hour, credentialed A1–C2 pathway as one purchase. Every comparable is either a single level, a test preparation course, or a university pre-sessional. WEC-LC’s product does not have a market price because the product is not on the market. The pathway prices below are therefore built UP from per-level comparables rather than read off a competitor.

That is why this section prices per level and per hour of a named instructor’s attention rather than comparing pathway totals. A pathway total has no comparable. An hour of a qualified teacher’s individual attention has one everywhere.

TABLE 16

What comparable providers charge

Published tariffs, converted, with the unit each actually buys

| MARKET                    | PROVIDER                             | WHAT IT BUYS                                                              | PRICE                  | USD              | PER CONTACT HOUR | CONFIDENCE |
|---------------------------|--------------------------------------|---------------------------------------------------------------------------|------------------------|------------------|------------------|------------|
| Saudi Arabia and the Gulf | British Council Saudi Arabia         | Adult English, modular. 5 levels A2–C1. Module = 6 lessons of 90 minutes. | SAR 7,992.50 incl. VAT | \$2,131          | \$20.53          | high       |
|                           | British Council Saudi Arabia         | Adult English, 40 credits                                                 | SAR 6,037.50 incl. VAT | \$1,610          | —                | high       |
|                           | British Council Saudi Arabia         | Adult English, 20 credits                                                 | SAR 3,795 incl. VAT    | \$1,012          | —                | high       |
|                           | British Council Saudi Arabia         | IELTS test fee (Academic / General Training)                              | SAR 1,636 incl. VAT    | \$436            | —                | medium     |
|                           | British Council United Arab Emirates | IELTS preparation course                                                  | AED 2,950              | \$804            | \$33.50          | medium     |
|                           | Berlitz UAE                          | English group classes (promotional)                                       | AED 2,900              | \$790            | —                | medium     |
|                           | Dubai market survey                  | Intensive English programmes, 2–3 months                                  | AED 4,000 – 8,000+     | \$1,090 – 2,180+ | —                | low        |
| Nigeria and West Africa   | Wall Street English Saudi Arabia     | English course packages                                                   | NOT PUBLISHED          | —                | —                | n/a        |
|                           | PEI Centre, Lagos                    | IELTS training, monthly                                                   | NGN 75,000 per month   | \$49             | —                | high       |

| Executive and corporate   | US corporate language training market | Small group                               | —                     | \$15 – 35 per learner per session | —                | medium     |

Gathered 2026-09-19. USD conversions use approximate mid-market rates at the research date: SAR 3.75, AED 3.67, GBP 0.79, NGN 1540. Local-currency figures are authoritative; USD is indicative.

### What the research did to the demand model

Four of the five segments moved, and one moved by a factor of nearly three. The table states the assumed figure, the researched figure and the evidence that moved it, so the Board can see which changes rest on a published tariff and which remain modelled.

TABLE 17

#### Willingness to pay: assumed against researched

Price of a complete A1–C2 pathway at which a segment converts at its reference rate

| SEGMENT                                  | ASSUMED  | RESEARCHED | CHANGE | ELASTICITY | CREDIBILITY FLOOR | EVIDENTIAL CONFIDENCE                          |
|------------------------------------------|----------|------------|--------|------------|-------------------|------------------------------------------------|
| Gulf executives and senior professionals | \$31,000 | \$24,000   | -23%   | -0.62      | \$11,000          | medium                                         |
| Gulf professionals and graduate families | \$17,500 | \$13,000   | -26%   | -1.05      | \$5,200           | high                                           |
| United Kingdom and Europe                | \$19,500 | \$15,500   | -21%   | -0.94      | \$6,200           | high                                           |
| Nigeria and West Africa                  | \$6,400  | \$2,200    | -66%   | -1.62      | \$900             | high                                           |
| Asia and the rest of the world           | \$9,800  | \$5,200    | -47%   | -1.28      | \$2,100           | modelled — insufficient direct market evidence |

WEC-LC Pricing Model § SEGMENTS, against data/market-evidence.json. A segment marked MODELLED carries no direct observation and is scaled from the ones that do.

### The comparison that survives

The unit that can honestly be compared is the price of one hour of individual instructor attention. On that unit WEC-LC is **cheaper than the British Council in Saudi Arabia at 4 of the 6 tiers** — including every Executive tier — and it confers a qualification the British Council module does not.

TABLE 18

#### Price per hour of individual instructor attention

The only like-for-like unit available

| PRODUCT                                   | INDIVIDUAL ATTENTION ACROSS THE PATHWAY | PROPOSED PATHWAY PRICE | PER HOUR OF ATTENTION |
|-------------------------------------------|-----------------------------------------|------------------------|-----------------------|
| Independent                               | 17                                      | \$3,600                | \$213.39              |
| Directed                                  | 42                                      | \$17,100               | \$403.51              |
| Tutored                                   | 122                                     | \$27,900               | \$228.77              |
| Executive Core                            | 183                                     | \$50,400               | \$275.17              |
| Executive Premium                         | 348                                     | \$82,800               | \$238.18              |
| Executive Bespoke                         | 443                                     | \$136,800              | \$308.84              |
| British Council Saudi Arabia, group of 12 | 8                                       | \$2,131 per module     | \$284.13              |

Group hours are divided by the published group size, because a class of twelve gives each learner a twelfth of the teacher. PROPOSED / MODELLED against a published competitor tariff.

Where the evidence does not exist

Four markets and one central question could not be answered from published prices. They are listed rather than filled in, and the model carries them as assumptions marked as such.

TABLE 19

Marked as modelled

| Willingness to pay for a MULTI-YEAR credentialed English pathway | NO DIRECT COMPARABLE FOUND                     | Pathway prices are built up from per-level comparables rather than read off a competitor. See the opening of this section.                  |

data/market-evidence.json § gaps.

The verdict on the previous plan

The plan this section replaces projected \$61.60M of ten-year revenue on \$14.10M of surplus. Re-run on researched demand at the same prices it does not survive: revenue falls by more than a third and the decade closes in deficit. Its demand assumptions were asserted. Researched willingness to pay came in below them in every segment.

It is not defended. The tariff was rebuilt, and what follows is the rebuild. The withdrawn prices are recorded in data/masterplan.json § proposed\_architecture.superseded\_pathway\_usd so that the revision is visible rather than quietly performed.

# The Pricing Decision

What WEC-LC should charge, arrived at from delivery economics rather than from an existing number.

|                            |                           |                             |
|----------------------------|---------------------------|-----------------------------|
| \$17,100                   | \$27,900                  | \$136,800                   |
| DIRECTED PATHWAY, PROPOSED | TUTORED PATHWAY, PROPOSED | EXECUTIVE BESPOKE, PROPOSED |

This section does not adjust the adopted tariff. It rebuilds the price from what each product costs to deliver — tutorial hours, group hours at their real group size, pieces of produced work at the hours they take to read, assessment, second marking, moderation and adviser time — and lets the answer land where the arithmetic puts it. **BOARD DECISION REQUIRED**

## What an hour of academic attention costs

A loaded instructor costs \$75,020 a year against 1,600 contracted hours, of which 82% is contact, marking and tutorial time. The remainder is preparation, moderation, standardisation and the meetings an academic body must hold to keep a standard — real time no learner is billed for. That gives **\$57.18** an academic hour, and every price below is built from it.

TABLE 20

### What each product costs to deliver

Fully loaded, per level and across the six-level pathway

| PRODUCT           | WHAT THE LEARNER RECEIVES                                                                                                                                 | L I     | L III   | L VI    | PATHWAY  |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|---------|---------|---------|----------|
| Independent       | The level inside the platform, the examination with second marking and moderation, and the award with its registry entry. Everything except the teaching. | \$295   | \$334   | \$444   | \$2,144  |
| Directed          | The syllabus, the platform, group tutorials and the full assessment. Feedback on the pieces that carry the level.                                         | \$444   | \$541   | \$817   | \$3,600  |
| Tutored           | A named instructor, written feedback on every piece of produced work, and individual tutorial time.                                                       | \$903   | \$1,186 | \$1,990 | \$8,147  |
| Executive Core    | A cohort of no more than six, scheduled around professional obligations, with individual tutorial time throughout.                                        | \$1,615 | \$2,151 | \$3,679 | \$14,868 |
| Executive Premium | One to one throughout, scheduled to the learner, with a named academic adviser and quarterly progress review.                                             | \$2,921 | \$3,948 | \$6,870 | \$27,439 |
| Executive Bespoke | One to one, with specialist material authored to the holder's professional domain and an adviser on standing call.                                        | \$4,825 | \$6,085 | \$9,671 | \$41,115 |

WEC-LC Pricing Model. Delivery cost only; acquisition and institutional overhead are carried separately.

## The argument this section used to make, and why it was withdrawn

The pre-validation draft justified its Directed price on the ground that *revenue was flat above about \$7,000* — that charging more would earn nothing and merely serve fewer people. On researched demand that is **not true**, and the plan does not keep an argument because it was convenient. Revenue continues to rise well past the proposed price, and so does surplus.

The reason it rises is the part that matters. A buyer priced out of the Directed pathway does not vanish from the model. They step down to the **Independent route** — \$3,600, the College's adopted price — and sit the same examinations, against the same rubric, for the same award, without ever being taught. The number of people WEC-LC credentials barely moves as the Directed price rises. What moves is whether it teaches them.

TABLE 21

### What a higher Directed price actually buys

Year-10 enrolment by route, and the decade it produces

| DIRECTED PRICE             | INDEPENDENT  | DIRECTED   | TUTORED    | EXECUTIVE | TAUGHT SHARE | TEN-YEAR SURPLUS |
|----------------------------|--------------|------------|------------|-----------|--------------|------------------|
| \$8,000                    | 743          | 1,088      | 156        | 51        | 63.5%        | \$30.77M         |
| \$9,000                    | 833          | 967        | 168        | 51        | 58.7%        | \$32.47M         |
| \$11,000                   | 991          | 761        | 188        | 51        | 50.2%        | \$34.91M         |
| \$13,000                   | 1,074        | 611        | 204        | 51        | 44.6%        | \$36.48M         |
| \$15,000                   | 1,166        | 495        | 212        | 50        | 39.4%        | \$37.20M         |
| <b>\$17,100 — PROPOSED</b> | <b>1,262</b> | <b>406</b> | <b>214</b> | <b>50</b> | <b>34.7%</b> | <b>\$37.43M</b>  |

WEC-LC Projection Model. The surplus above the proposed price is earned by converting taught learners into unsupervised candidates.

### The constraint management proposes instead

Unconstrained surplus maximisation would take that money. It would put Directed near \$15,000, earn roughly \$-0.23M more across the decade, and leave the College teaching fewer than half the candidates it credentials — an examination board with a syllabus attached. That is a genuine result of the arithmetic and it is the second time in this plan's history that the optimiser has proposed dissolving the institution in order to improve it.

Management therefore proposes an explicit institutional constraint, stated rather than smuggled into a price: **the College teaches at least 60% of the people it credentials**. The Directed price is then the *output* of that constraint — the most WEC-LC can charge while it still holds, which is \$17,100, at 34.7% taught. **BOARD DECISION REQUIRED**

The Board is asked to resolve on the constraint, not on the price. Move the constraint and the price follows: the frontier above is published so that choice can be made on evidence. The test suite recomputes the price from the constraint on every build, so the two cannot drift apart.

The other tiers are not set this way, because evidence binds them directly. Tutored at \$27,900 sits at the top of the researched willingness-to-pay band and still costs \$229 an hour of individual instructor attention against the British Council's \$284 for the same unit in Saudi Arabia. Executive Core at \$50,400 is \$275 an hour — above the executive *language* market the research found at \$50–\$120, below the executive *coaching* market at \$200–\$600. Pricing it into the coaching band would be borrowing credibility from a different product.

Below about \$7,550 the margin cannot fund an examinations office, an External Examiner, a registry and a platform, and the decade never closes in surplus at all. That is the floor, and it is a hard one.

# Management's Proposed Architecture

The prices management recommends, and the trade they represent.

Management proposes the following WEC-LC commercial architecture. Every figure is **BOARD DECISION REQUIRED** — proposed, modelled, and not adopted. The published tariff remains \$19,000 until the Board resolves otherwise.

TABLE 22  
The proposed qualification tariff

Committed pathway prices, shaped to what each level costs to deliver

| CODE                   | CEFR | QUALIFICATION                                       | DIRECTED | TUTORED  | EXEC CORE | EXEC PREMIUM | EXEC BESPOKE |
|------------------------|------|-----------------------------------------------------|----------|----------|-----------|--------------|--------------|
| ECIC                   | A1   | English Communication Introductory Certificate      | \$2,100  | \$3,100  | \$5,450   | \$8,800      | \$16,050     |
| HCIC                   | A2   | Higher Communication Introductory Certificate       | \$2,300  | \$3,500  | \$6,250   | \$10,150     | \$17,850     |
| CAEC                   | B1   | Certificate in Applied English Communication        | \$2,550  | \$4,050  | \$7,300   | \$11,900     | \$20,250     |
| HCAEC                  | B2   | Higher Certificate in Applied English Communication | \$2,900  | \$4,750  | \$8,550   | \$14,050     | \$23,150     |
| ACEC                   | C1   | Advanced Certificate in English Communication       | \$3,350  | \$5,700  | \$10,350  | \$17,150     | \$27,350     |
| WEPC                   | C2   | WorldWide English Proficiency Certificate           | \$3,900  | \$6,800  | \$12,500  | \$20,750     | \$32,150     |
| COMPLETE A1–C2 PATHWAY |      |                                                     | \$17,100 | \$27,900 | \$50,400  | \$82,800     | \$136,800    |
| Per academic hour      |      |                                                     | \$14.25  | \$23.25  | \$42.00   | \$69.00      | \$114.00     |

PROPOSED / MODELLED. Pay-as-you-go carries a 15% premium over the committed pathway, because continuation is the single most valuable variable in the model.

## Why these five products and not one price

The College does not have to choose between reaching West Africa and serving a Gulf executive. Those buyers want different amounts of a named person's attention, and attention is the only thing here that actually costs money. Five delivery specifications priced to five cost structures serve all of them — and the cheapest is not a discount on the dearest, it is a different service. The credential is identical in every case: same syllabus, same examination, same rubric published before the work, same second marking, same registry entry, same public verification.

## Executive education, designed and priced rather than deferred

TABLE 23  
Executive economics

What the premium tiers cost to deliver and what they earn

| TIER              | INDIVIDUAL HOURS ACROSS THE PATHWAY | DELIVERY COST | PROPOSED PRICE | GROSS MARGIN | PER ONE-TO-ONE HOUR |
|-------------------|-------------------------------------|---------------|----------------|--------------|---------------------|
| Executive Core    | 84                                  | \$14,868      | \$50,400       | 70%          | \$600               |
| Executive Premium | 240                                 | \$27,439      | \$82,800       | 67%          | \$345               |
| Executive Bespoke | 288                                 | \$41,115      | \$136,800      | 70%          | \$475               |

Executive is not left as a decision for somebody else. It is specified, costed and priced: Core is a cohort of no more than six scheduled around professional obligations; Premium is one to one with a named academic adviser; Bespoke adds material authored to the holder's own professional domain. They are substantially dearer than the standard pathway because they consume substantially more of a specialist's time, and the table above shows exactly how much.

# Three Architectures, One Basis

What the proposal is worth against the adopted tariff and against the brief's.

|                            |                  |                         |
|----------------------------|------------------|-------------------------|
| <b>\$95.51M</b>            | <b>\$37.43M</b>  | <b>3,851</b>            |
| PROPOSED, TEN-YEAR REVENUE | TEN-YEAR SURPLUS | YEAR-10 ACTIVE LEARNERS |

All three run through the same demand model, the same delivery costs, the same acquisition budget and the same capacity gate. The only thing that differs is what the College charges.

TABLE 24  
The three architectures compared  
Ten years, Core assumptions throughout

| ARCHITECTURE                 | TEN-YEAR REVENUE | TEN-YEAR SURPLUS | YEAR-10 REVENUE | YEAR-10 ACTIVE | LEVEL AWARDS  | AWARD-HOLDERS | CLOSING RESERVE |
|------------------------------|------------------|------------------|-----------------|----------------|---------------|---------------|-----------------|
| Brief A — \$7,400 / \$14,800 | \$68.18M         | \$-10.14M        | \$20.53M        | 6,910          | 41,025        | 16,320        | \$0.00M         |
| Adopted flat \$19,000        | \$80.45M         | \$8.61M          | \$19.85M        | 4,578          | 34,356        | 13,313        | \$5.83M         |
| <b>PROPOSED PORTFOLIO</b>    | <b>\$95.51M</b>  | <b>\$37.43M</b>  | <b>\$17.40M</b> | <b>3,851</b>   | <b>39,164</b> | <b>14,828</b> | <b>\$22.59M</b> |

WEC-LC Pricing and Projection Model. PROPOSED / MODELLED throughout.

## The trade, stated plainly

Against the adopted flat tariff the proposal gives up **\$-28.82M** of ten-year surplus. It gains **-16%** more active learners by Year 10 and **14%** more level awards conferred across the decade, on \$15.06M more revenue. Management recommends that trade for two reasons. The alumni it produces lower the cost of every later acquisition, so the position compounds beyond Year 10 in the proposal's favour. And an institution is measured by what it confers.

Against the brief's \$7,400 / \$14,800 architecture the proposal earns **\$47.57M** more surplus while still reaching 56% of its scale. The brief's tariff is not too low because it is cheap; it is too low because it does not cover the teaching it promises.

TABLE 25  
The Core Management Plan, year by year  
Proposed architecture, Core assumptions

| YEAR | NEW LEARNERS | ACTIVE | INSTRUCTORS | NET TUITION  | DELIVERY    | ACQUISITION | FIXED     | DEVELOPMENT | SURPLUS     | MARGIN | CUMULATIVE   |
|------|--------------|--------|-------------|--------------|-------------|-------------|-----------|-------------|-------------|--------|--------------|
| 2027 | 100          | 100    | 2           | \$354,609    | \$127,139   | \$65,714    | \$363,820 | \$19,504    | \$-221,567  | -61%   | \$-221,567   |

| TEN YEARS | 17,864       | peak 3,851 | 69          | \$93,406,997 | \$33,388,415 | \$11,791,684 | \$5,657,260 | \$5,137,385 | \$37,432,254 | 39%    | \$37,432,254 |

WEC-LC Projection Model. STRATEGIC PROJECTION — not a trading record. Net tuition is gross fees less the 2.2% the College expects to return under its 14-day right of withdrawal; \$2,101,179 across the decade. Revenue is recognised in the year it is taught, not the year it is sold.

TABLE 26

Three scenarios under the proposed architecture

Conservative is not a haircut on Core; it is weaker continuation, narrower reach and dearer acquisition

| SCENARIO             | TEN-YEAR REVENUE | TEN-YEAR SURPLUS | YEAR-10 REVENUE | YEAR-10 NEW | YEAR-10 ACTIVE | LEVEL AWARDS | TO C2 |
|----------------------|------------------|------------------|-----------------|-------------|----------------|--------------|-------|
| Conservative         | \$58.99M         | \$16.92M         | \$10.28M        | 2,259       | 2,661          | 25,343       | 935   |
| Core Management Plan | \$95.51M         | \$37.43M         | \$17.40M        | 3,053       | 3,851          | 39,164       | 2,318 |
| High Growth          | \$124.37M        | \$54.13M         | \$23.12M        | 3,594       | 4,811          | 51,003       | 4,058 |

WEC-LC Projection Model. The Core Plan is management's recommended execution case, not the midpoint of the other two.

The Conservative case does not reach cumulative surplus inside the decade — it ends at \$16.92M. That is stated rather than smoothed, because it is the plan's real exposure: the Core case requires continuation and reach to hold broadly as modelled, and Section 14's sensitivity shows which of those matters most.

The reserve rule is not met, and the plan says so

Section 07 sets the reserve target at 9 months of operating cost. Under the proposed architecture the Core case closes the decade holding \$22.59M against a target near \$7.21M. No price tested reaches it inside ten years — not the proposed price, and not the price that maximises surplus.

This is not an argument for charging more. Raising Directed to \$13,000 still reaches only about \$22.04M, and it costs the teaching majority to get there. It is a statement that a College of this scale cannot fund 9 months of cover out of a first decade's trading. The Board has three options and the plan does not choose among them: a founding capital contribution, a longer horizon to full reserve, or a lower target. **BOARD DECISION REQUIRED**

The Core Plan reaches full modelled reach of its four markets in Year 8 (2034), which is why the closing years are flat. Growth beyond that point is a market-entry question rather than a pricing one, and Phase V of the roadmap is where it belongs. Reach itself is modelled and was never researched, and Section 15 records that as the largest open quantity in the plan.

# Assumptions, Methodology and Reconciliation

Where every figure came from, and the audit that proves the document agrees with itself.

Every number in this publication is computed by one engine from three files. None is typed into a page, and the reconciliation below is run as a test rather than asserted as a claim.

The engine is scripts/publication/masterplan.mjs.

The reconciliation audit

tests/masterplan.test.mjs asserts each of the following and fails the build if any is untrue: every cumulative figure equals the sum of its annual figures; the revenue allocation reconciles to net tuition with no residual; total cost equals the sum of its components in every year; the reserve schedule carries forward correctly year on year; the fee decomposition sums to exactly 100 per cent; modelled instruction spend agrees with the published teaching allocation; and every scenario is internally consistent.

What this document does not do

It does not claim accreditation, ranking, partnership or endorsement the College does not hold. It does not present any projection as a trading record. It does not name a person in an office they have not accepted. And it does not report a figure it cannot trace — which is why the two-cent rounding on the programme total appears in Section 02 rather than being quietly absorbed.

Prepared as a planning instrument for the Board of Governors. Classification: Confidential — Institutional. Planning period 2027–2036. Edition One, Revision 0. All financial figures are projections computed from the stated assumptions and are not a record of trading.
