

INTERNAL — NOT FOR DISTRIBUTION

WORLDWIDE ENGLISH COLLEGE · LONDON CAMPUS

The Internal Editorial Bible

Working registers for *The International English Fluency Certificate: The Complete Curriculum*, 443 pages.

Seven registers of legitimate improvement, and a governance register of decisions that only the institution can take. Every entry names who has to act, because the single most common failure of a document like this is to record a finding without recording whose problem it is.

WEC-LC/IEFC/CUR/2026/E01 · Document ID QJEX-ZN8T-YAN8-OAEX

Generated 2026-08-17 · 50 items executed · 21 remaining across 7 registers, plus 6 governance items

PURPOSE

How this document is meant to be used

This replaces the Register of Omissions that previously appeared in the public edition.

That register was honest and it was the wrong instrument in the wrong document. A volume intended for students, teachers and reviewers had been opening by listing its own absences, which teaches a reader to look for absences. Nothing has been concealed: every finding it carried is in this document, and several have been sharpened by having to name an owner.

What changed is the separation of three things the omissions register had collapsed into one. Some findings are **editorial** — the publication can fix them itself, and it should. Some require **academic authoring** by qualified people. Some are **governance decisions** that only the institution can take. Filing them together made all three look equally like defects in the book, when only the first kind are.

THE RULE THIS DOCUMENT DOES NOT REPEAL

Moving a finding out of the public edition does not license inventing a solution to it. An entry marked **Academic authoring** or **Governance** must never be satisfied by writing plausible text — that is precisely what the omissions register existed to prevent, and the guard survives the move. What changed is where the finding is filed, not what may be done about it.

Where the work sits

OWNER	ENTRIES	WHAT IT MEANS
EDITORIAL	3	The publication can do this itself. No new curriculum, no decision.
ACADEMIC AUTHORIZING	6	Needs qualified academic authors. Not inventable.
GOVERNANCE	7	Needs an institutional decision or an external authority.
PRODUCTION	2	Needs a printer, a proof, or a colour-managed workflow.
TOOLING LIMIT	3	Blocked by the rendering pipeline, not by effort or willingness.

SIGN-OFF

Final Publication Audit

The Editorial Board's assessment, heading by heading, before this edition is released. Four statuses, and they are not interchangeable: a board that approves everything has audited nothing.

STATUS	HEADINGS	WHAT IT MEANS
APPROVED	10	Nothing within editorial authority would materially improve this.
APPROVED WITH OBSERVATION	7	Releasable, with a limitation stated rather than left to be found.
REQUIRES GOVERNANCE DECISION	2	Blocked on a decision no editor may take.
NOT READY FOR PUBLICATION	0	Do not release this heading.

Educational Excellence

APPROVED

Every one of the 294 authored items is printed whole: objectives, staged practice with the designed timing of each stage, modelled language, the formative check that tells a teacher whether to move on, and — in the teacher's edition — the answer key beneath each quiz. A teacher can teach from these pages without the platform, which is the only test of a curriculum that matters.

Academic Integrity

APPROVED WITH OBSERVATION

No fact in this volume is unsupported by the curriculum or the institutional record. The figures are generated at build time and several are unflattering: the assessment map prints a competency column that is empty in all six levels, and the stage-frequency figure prints the naming tail rather than the head alone.

OBSERVATION

Two claims were withdrawn during this audit rather than defended. A four-skills figure carried the caption "reading and writing rise as the ascent proceeds"; measured, reading is flat everywhere but one level and falls at the last. It had been printed in three editions. And the routes page asserted the curriculum names no grammar stage; it names one, at VI.10.1. Both are corrected, and both are recorded here because the pattern matters more than either instance: a sentence written from memory of the data outlives the data.

Editorial Excellence

APPROVED

The apparatus is extracted, never composed: 191 cross-references pulled from the prerequisite stages, 48 pull quotes that are the curriculum's own discussion prompts, a 50-term glossary in which every headword is counted across the corpus before it prints, and three indexes keyed to lesson references rather than page numbers so they survive reflow. Where an extraction could not be made honestly — a grammar route, a fourth-skills figure — nothing was printed and the reason is on the page.

Information Architecture

APPROVED

One house structure holds from the first level to the sixth, and the reader is never more than a few pages from an event: the measured distance between designed events in the curriculum body is a median of four pages and a maximum of five. Six figures carry the architecture, each measured from the database rather than drawn to illustrate it.

Typography

APPROVED

Two families, one measure, one baseline. Nothing is set below the 5.5 pt print legibility floor — thirteen sizes once were, all inside figures that scale with their viewBox. Rule weights and tracking are held to small declared scales and counted on every build. Orphans and widows are set on body prose, headings never break from what follows them, and table headings repeat across a page break.

Colour

APPROVED

Fourteen institutional colours, each with a stated role, and six level identities generated in OKLCH at one lightness so only hue varies — the measured ink-luminance spread is 1.23× where hand-picked hexes gave 2.24×. Every ink carries at least 4.5:1 against the paper it is specified on; nine contrast pairs are checked on every build. Royal Gold is barred from type on light paper at 2.82:1 and Bronze carries it instead.

Photography

APPROVED WITH OBSERVATION

Eleven licensed editorial photographs, each graded to a duotone — the level plates in their own level's ink, the section bands in the College's blue — so that eleven images by eleven photographers read as one commissioned series. None is captioned as a record of this College, because none is.

OBSERVATION

A twelfth was licensed for the pronunciation strand and is not used: a posed classroom with a bare-shouldered top, failing both the modesty requirement and the observational direction of the other eleven. The licence is spent. Per-module photography across all sixty openers remains a licensing question, not an editorial one.

Illustration

APPROVED

Nothing in this volume is a stock illustration or a traced image. The rosettes are hypotrochoids, the star figures eight-fold girih constructions, and the crest, borders, corner fans and fleurons are generated from their own geometry at render time. Nineteen stage icons are drawn on one 24-unit grid at one stroke weight; five were redrawn after inspection at their printed size of 13 px.

Navigation

APPROVED WITH OBSERVATION

Every lesson carries its reference, its prerequisites and — on the module openers — the later lessons that return to it. Each level opens with its own ten modules. Six reference sections close the volume.

OBSERVATION

The running head is the same on every page. Chromium cannot vary a running head by section in its print pipeline — verified, not assumed — and the printed thumb index that would replace it needs bleed, which this pipeline also cannot produce. Both are engine limits, and both are mitigated rather than solved.

Reader Experience

APPROVED

The printed book is rasterised page by page and every page measured for how far its ink reaches. The first such measurement found 172 of 522 pages under 60% full and 106 under 40% — one fifth of the book was white space nobody had chosen, inherited from a forced page break before every assessed item. Removing it took the volume from 522 pages to 441 with not one word cut. The median page now fills 96%.

Teacher Experience

APPROVED

This is a teacher's edition and says so. The answer key sits beneath its own quiz rather than at the back of a 441-page book; every rubric is set as an instrument with the criterion on the left and what the marker is looking for on the right; the designed duration of each lesson is summed from timings the curriculum already carried and had never added up.

Assessment Design

REQUIRES GOVERNANCE DECISION

The instrument is complete and regular: 120 assessed items, 660 questions with answer keys, and 307 rubric criteria across sixty rubrics, identical in structure at every level.

OBSERVATION

None of the 120 is mapped to a named competency. The College defines the IEFC as a qualification extending CEFR proficiency through competency verification; until that column is populated the definition is an intention rather than a demonstration. Establishing the mapping is academic authoring and belongs to the Board of Academic Standards and Curriculum Excellence. The empty column is printed in all three editions, including the one written for accreditation panels.

Print Production

APPROVED WITH OBSERVATION

The text block and the cover are separate files, as a printer receives them. The spine is calculated from the bound extent at a stated caliper and recalculated per edition. The cover carries 3 mm bleed on all four edges. Every placed photograph clears 300 dpi at its printed size, and no drawn line falls below the 0.25 pt press floor.

OBSERVATION

This book has never been printed. Colour is specified in sRGB and has not been separated or proofed; ink coverage, show-through and paper interaction are design intentions until a wet proof says otherwise. Creep compensation is documented rather than applied, because it depends on the signature scheme the printer chooses. No edition should go to a full run without a proof.

Accessibility

APPROVED WITH OBSERVATION

The PDF is tagged, carries a document language and a navigable outline. No heading level is skipped anywhere in the volume; all 82 tables declare header scope and carry header cells; every placed photograph has descriptive alternative text and every decorative SVG is hidden from assistive technology while every figure carries a label. A large-print variant builds from the same source at any type scale.

OBSERVATION

Tagging has not been validated against PDF/UA by an external checker, and the reading order of the figures has not been tested with a screen reader. Neither is a defect found; both are checks not yet run.

Brand Identity

APPROVED

One crest, one colour system, one type system, one ornamental language, applied across the cover, the three editions, the specifications and the platform. The design is deliberately unfashionable — a transitional serif, a humanist sans, engine-turned ornament and a blue-and-gold livery — because the volume has to look current in twenty years, not this season.

Institutional Credibility

APPROVED WITH OBSERVATION

Every public claim in the volume is verifiable. The College is stated plainly to be unaccredited, in all three editions. No officer is quoted, no partnership named, no ranking claimed, and the conventional Foreword is absent rather than composed for people who do not hold office.

OBSERVATION

The volume's credibility now exceeds the platform's in one respect: seven registers of internal findings exist because the institution has more open questions than a prospectus would admit. That is the right way round, and it means the Bible must be read alongside the book by anyone answering for it.

Legal & Licensing Compliance

REQUIRES GOVERNANCE DECISION

All eleven placed photographs are licensed, credited, and carry a resolvable licence reference; the credits table is checked against the images actually placed in each edition on every build. No typeface is used that is not present on the systems the volume is opened on. Nothing is traced, scraped or generated in imitation of a licensed work.

OBSERVATION

ISBN, DOI and legal deposit are printed as "Not assigned" with the issuing authority named. Assigning them is an institutional act, not an editorial one, and no edition should be distributed commercially until they exist.

Digital Companion Consistency

APPROVED WITH OBSERVATION

The editable edition now carries what the print edition carries: the six figures, the six graded plates, per-level colour identity, the cross-references, the glossary, the routes and the pronunciation strand. Faculty editing the curriculum had been the only readers unable to see the figure showing no competency mapping.

OBSERVATION

THIS HEADING FAILED ITS FIRST AUDIT AND IS THE REASON THE AUDIT WAS WORTH RUNNING. The English site had been migrated to WEC Credits and Total Qualification Time; the Arabic site had not, and went on publishing the retired scheme in full — 720 learning units in the lede, in two stat rows, in the fee table and twice in the FAQ — together with per-unit pricing at \$26.39, which the English pages had removed precisely because it ties a price to content that is 41% authored. The English fee table was separately wrong: its total row read 720 in a credits column whose own six rows read 20, and carried four cells where the header declares five, so the tuition total printed under the wrong heading. All corrected. The guard that should have caught it read only the English pages and never read the table as a table; it now does both.

Long-term Maintainability

APPROVED

Nothing in the volume is transcribed. Every count, figure, index, cross-reference and identity code is generated from the academic database at build time, so the book cannot drift from the curriculum without the build saying so. Three editions and a large-print variant come from one source. 49 test files stand behind it, and each of the defects found in this audit left a standing assertion behind rather than a fix alone.

THE CONDITION FOR SIGNING

This edition is declared complete not because it is perfect but because editorial authority is exhausted: nothing further within the Board's power would materially improve learning, credibility, usability, accessibility, visual quality or publication quality. Two headings are not approved and neither is an editorial matter — the competency mapping is academic authoring, and the ISBN, DOI and legal deposit are institutional acts. One further limitation is absolute and belongs to nobody in this room: no edition of this book has been printed, and none should go to a full run without a wet proof.

COMPLETED

Executed in this edition

50 items that were on these registers and are now in the book. They are recorded rather than deleted: a register that only ever shrinks gives no account of what was actually done, and the next edition's editor needs to know a subject index exists — and how it is derived — before proposing one.

ITEM	WHAT WAS BUILT
All 114 self-checks, the last revision stage, and eight metrics at 100 per cent	The remaining 57 self-checks were written — Levels IV, V and VI — bringing the record to 114 of 114 lessons, 366 prompts, every one with its answer beside it, and 135 targeting a named confusion. Five in the Level V batch and none in Level VI arrived without one; as in both earlier batches the five confusions were written rather than the standard relaxed. Level VI needed a different kind of trap: at that level the expensive errors are grammatical sentences meaning the opposite of what the writer intended — "subject to" where "notwithstanding" was meant, "may" read as permission when it confers a discretion, an unearned booster in a paper otherwise properly hedged. The module quiz does not catch those, because a learner who makes them believes they were right. Separately, Lesson 1.1 — the first lesson of the programme — was given the revision stage it had never had: it was omitted because nothing precedes the first lesson, but revision is what comes after a lesson, and Lesson 1.2 opens by recapping it. With those two things all eight mastery metrics read 114 of 114 except professional relevance, which reads 10 and should: it is required only where the module is professional. Educational completeness and complete mastery coverage both reach 100 per cent. What that means precisely: every lesson has all eleven components present. It does not mean the components are good. Every self-check, exercise item and architecture classification in the programme remains press_drafted, and not one has been read by a qualified academic. A metric at 100 per cent measures completeness, and completeness is the floor of quality rather than the proof of it.
A count in the practice table that had been wrong three times	The self-check row read "Authored for 57 of 114 lessons" while 95 existed. It had been hand-written after each of three authoring passes and stale after each of them, because the seed grew and the sentence did not. The figure is now read from the same place the metric reads it, and a test asserts the printed figure equals the measured one — so typing a literal back into that sentence fails the build.
The Revision Guide became derivable by fixing one lesson	Title 47, the six-volume IEFC Revision Guide, required a revision stage in all 114 teaching lessons and had 113. Writing the missing stage moved it from Requires authoring to Derivable without anyone deciding it should be: status is computed from measured requirements, so the catalogue found the change before an editor did. It enters the impact ranking scored 41 — below the Workbook, the Activities Handbook and the Planning Manual, because it gathers a strand rather than creating one.
Learning Architecture, and the question that replaced the wrong one	The five modes are now Learning Architectures — what a lesson IS educationally, not how it is delivered — and each carries its educational dependency: the sentence a teacher can give for why this lesson is designed that way. Independent 33, Collaborative 68, Authentic Communication 12, Instructor-Led 1, Guided nought, summing to 114. "Is the lesson independently learnable?" is retired: it had a wrong answer built into it, counting 68 collaborative lessons as incomplete for being collaborative. The standard is now educational completeness — eleven components, all required, with professional relevance required only where the module is professional so that a Level I greetings lesson is not pushed to invent a workplace application. 56 of 114 lessons are educationally complete, and the only thing standing in the way of the rest is the 57 self-checks still to write, plus one lesson with no revision stage.
Learning modes, and a metric that was measuring pedagogy as a defect	Lessons independently learnable read 54 per cent, and the obvious response was to author solo alternatives for the other 53 until the number rose. That would have been the worst decision in the project: a speaking lesson that requires another speaker is stronger than a weaker exercise redesigned to satisfy a percentage. Every lesson now declares the mode its objective requires — independent 33, collaborative 68, authentic communication 12, instructor-led 1, guided nought — summing to 114, and a lesson is measured against its own mode. Lessons whose mode is fully supported: 100 per cent. Guided is defined and unused, and reported as nought rather than hidden. The classification is STRUCTURAL — derived from the lesson text — and awaits expert review.

ITEM	WHAT WAS BUILT
Self-checks: Levels I to III complete	57 of 114 lessons, 174 prompts, 70 of them targeting a named confusion — the present perfect that survives a question naming a time, "In my opinion, I think", the dropped passive auxiliary, over-deduction with "must", "responsible of", and the learner who uses "after that" for every transition and flattens a story into a list. Complete mastery coverage: nought to 16 to 49 per cent, each step bounded by what was authored rather than by how the metric was defined. Eight self-checks in the second batch carried no identified confusion; rather than relax the standard the eight confusions were written.
Self-checks, and the first non-zero mastery reading	19 self-checks for Level I — 58 prompts, every one with an answer beside it, and 25 targeting a named confusion: the missing third-person -s, "quarter to nine" rather than eight, "she has tall", the -ed that vanishes after didn't. A self-check is not a lesson stage, because a printed stage cannot hide an answer; it is a separate record the learner attempts alone, immediately, rather than discovering ten lessons later at the module quiz that they misunderstood lesson three. Complete mastery coverage moved from nought to 16 per cent — bounded by the 19 authored, not by intent. 95 lessons remain.
The pedagogical record, and the 1,616 fields deliberately left empty	17 fields for each of the 114 teaching lessons: common mistakes, why they are made, misconceptions, intervention, alternative and faster and visual explanations, analogy, remediation, differentiation both ways, confusable concepts, prerequisites, time, and what the lesson unlocks. Three are derived from the curriculum — prerequisites from the lesson stage, time from its own stage timings, and what it unlocks from the cross-reference graph. The other fourteen are what a teacher learns by teaching, and no classroom observation has yet been entered into this record, so 1,616 of 1,938 entries are marked not_yet_evidenced and carry no value. That emptiness is the deliverable: a record filled with plausible prose about misconceptions nobody has written down would look like classroom knowledge, be guesswork, and be inherited as fact by every future edition. A test asserts that no field is ever marked observed_in_teaching before an observation is recorded against it.
All 49 supplied- material sets authored	Every practice stage in the programme that hands a learner something now has the something: 49 sets, 282 items, across all six levels. Complete practice rose from 67 per cent of lessons to 100; lessons independently teachable from print rose from 67 to 100; lessons learnable without a teacher rose from 33 to 54. Every set is press_drafted and none claims academic approval, because there is nobody with standing to give it. The Workbook, withdrawn two passes ago for pointing at material that did not exist, is derivable again — and this time the material is there.
Fifty instructions pointing at nothing, found and counted	Asking the mastery question — can a learner who finishes this lesson do something they could not do before — found 50 practice stages across 48 lessons that hand the learner material which did not exist: "you are given 8 sentence pairs", "sort 10 sentence prompts", "revise a provided paragraph". A learner alone met a task they could not begin; a teacher invented the items before every class, differently each time. Detection is mechanised and classification is declared in two registers, so a candidate in neither fails the build — and the first version of that check was false, passing by construction until a sabotage run exposed it.
The first ten exercise sets authored	sql/seed-exercises.sql: 10 sets, 60 items, 43 with model answers, covering every supplied-material stage in Levels I and II — taken first because beginners are least able to improvise what is missing. Every set is press_drafted and none claims academic approval, because the College has no appointed academic body to give it. Three sets replace a picture the curriculum asks for by describing the frames in words; the illustration itself is recorded as outstanding rather than pretended away. 39 sets remain, each one named.
The Workbook requirement, corrected twice	First it measured that practice was DESCRIBED and found the Workbook derivable when it was not. Then it measured printable items and reported nought of 114 lessons, which overstated the gap by a factor of two: most practice here is learner-generated and needs nothing supplied. The requirement now reads 49 supplied-material sets, of which 10 exist. A metric that overstates a gap is not safer than one that understates it — it costs the same credibility and sends the authoring effort to the wrong place.

ITEM	WHAT WAS BUILT
The Workbook was withdrawn by attempting it	It ranked first for educational impact and the catalogue said it was derivable: every lesson carries guided practice, homework and extension. Every one of those is a BRIEF — "Combine 8 sentence pairs into one sentence using a defining relative clause" — and nought of 114 lessons carries the eight pairs. The requirement had measured that practice was DESCRIBED, not that a learner had anything to work on. A new measured requirement was added, the title moved to Requires authoring with a deficit of 114 lessons, and the Assessment Handbook was published instead. The Classroom Activities Handbook stays derivable from the same briefs, because a teacher reads a brief and writes the pairs on the board; a learner alone cannot.
The IEFC Assessment Handbook	154 pages at B5. 60 assignments, 60 rubrics, 307 criteria and 660 questions with their answer keys, arranged by what an assessor does rather than by curriculum order. Producing it found that five rubrics state no pass threshold, and that they are systematic rather than random: the Review & Consolidation module of every level except the last. The volume prints the gap where an assessor will meet it rather than filling it in.
First off the impact ranking: The IEFC Listening Scripts	48 pages at the flagship trim. 60 listening scripts, 497 speaker-attributed cues and 46 minutes of reading, written for the audio platform and never printed. It was published first because it scored first, not because it was easiest: a listening lesson currently cannot be run at all — nought of 60 scripts has a recording — so this is the only way the material reaches a class. Set as a performance script rather than a transcript: speaker in the margin, one cue per line, no script broken across a page turn, target pace at the head of every script, and the comprehension task on the same spread as the script it belongs to. The title page states there is no audio rather than burying it in a note. No timecodes are printed: every cue timing in the database is empty, and a timecode for audio that does not exist would be inventing a measurement.
The Canon: five divisions, and the eleven titles that were not books	Every one of the 62 catalogue titles is now placed in one of five divisions, and every one states what to read before it, alongside it and after it — checked by a test that fails if a relationship points at a publication which does not exist. The canon was specified as 51 titles; 11 of them were the same book under another name — a Marking Guide and a Rubric Handbook and an Assessment Handbook are one volume with three titles — and each is resolved in the open as justified, referenced or removed, with the reason printed. One of the eleven was a title the Press had already catalogued itself. The Canon Index is published as a volume at the scholarly trim.
The publishing order, ranked by educational impact rather than by convenience	Nineteen derivable titles scored against four weighted criteria — reach, frequency, what it makes possible, and how hidden the material is now — each with a written reason. The order falls out of the arithmetic. The Workbook and the Listening Scripts tie at 54, and the tie-break is declared rather than settled by array order: the title that unblocks more goes first, so the scripts lead, because listening lessons cannot currently run at all and workbook lessons can.
The first title derived from the catalogue	The IEFC Pronunciation Handbook — 70 pages at royal octavo, the first publication of the Press set at a format other than the flagship's. 180 pronunciation targets, 114 classroom stages and 60 model scripts that were authored for the platform and had never been set as a book: a teacher who wanted to see the pronunciation strand whole had to open 114 lessons one at a time. Nothing in it is composed for the volume. The one editorial judgement is the arrangement — by the six kinds of difficulty rather than by level, because a teacher reaching for a pronunciation handbook is asking where a problem is taught, not what comes next; the curriculum order is recovered in an appendix.
The legacy apparatus, and two probes it corrected	Every publication now carries family, maturity, issue code, citation form, cataloguing data and a revision history derived from the source repository. Building the first new title immediately found two defects in the readiness probes themselves: archive-readiness depended on each renderer printing a generation stamp, so the apparatus now carries it by construction; and print-readiness tested for A4, which failed the first book set at one of the house's own four trims. The probe was measuring the flagship rather than the standard.

ITEM	WHAT WAS BUILT
The Press constituted as a set of checkable rules	Twenty-three constitutions covering institutional publishing, editorial, design, typography, colour, photography, illustration, infographics, iconography, accessibility, print production, digital publishing, copyright, licensing, revision, translation, quality assurance, academic integrity, editorial review, visual review, production workflow, version control and governance. Every clause declares its own force — Enforced (a named test fails the build), Observed, Adopted, or For adoption — and tests/publication-press.test.mjs asserts that a clause may only claim enforcement if it names a test file that is on disk, and may only name one if it claims enforcement.
The ten-year publication architecture, computed rather than promised	42 titles across 10 series and four waves. No status is typed: each title declares what a real edition would require in countable units, and Published / Derivable / Requires authoring / Requires governance falls out of the live academic database. The result is unflattering in the right places — the Reading Programme reports 78 of the 114 lessons it needs, the Academic Framework volume reports nought of 120 assessments mapped, and the Listening Programme reports 120 scripts and nought recordings. The test empties the inventory and asserts every derivable title stops being derivable, which is how a typed status would be caught.
The house visual identity, as a system for the second book	The Production Specifications describe one book exactly and cannot govern the next. The house identity separates constants (crest, two families, ground, metal, folio, spine architecture) from what varies by series, and derives every number: four formats with margins as proportions of trim under a 75-character measure ceiling, spine bands from the same caliper formula that produced the flagship cover, and one colour per series checked for contrast against the ground it is actually printed on. Three defects in the first assignment were caught by that check — two shared hues, and midnight navy assigned to a series, which measures 1.00 : 1 on a midnight navy spine.
Three editions from one source	IEFC_EDITION selects between the Teacher's Edition (441pp, answer keys and the teaching guide), the Student Edition (437pp, the same curriculum with the keys and the guide withheld — the rubrics stay, because a learner is entitled to the criteria they are marked against) and the Institutional Edition (53pp: the architecture, the six figures, the awards, every level's contents and the assessment index, without the lesson bodies). One curriculum, one design system, one set of extractors; each edition binds to its own extent and gets its own cover. tests/publication-editions.test.mjs holds them together — including that the student edition marks no correct answers, that no curriculum text is in one full edition and missing from the other, and that the empty competency column travels into the executive volume rather than being quietly dropped.
Photographic credits follow the edition	The colophon credited a photograph "placed at Teaching from This Book" in the student edition, which has no such section. Credits are now filtered by the images actually placed, read off the assembled markup — and the first attempt at that fix listed the sections by hand and reproduced the same bug, which the edition test caught.
The printed page, rasterised and measured	The book is now rendered back to pixels page by page and each page asked how far down its ink reaches. Pagination happens inside the print pipeline, after every CSS decision, so this is the only place the question "is this page finished?" can be answered. The first run found 172 of 522 pages filling under 60% of the text block and 106 under 40%.
The forced page breaks, removed	A ceremonial page break stood before each of the 120 assessed items and each of the 60 module openers. The idea was sound and its price was a hole on the page before it, every time — one fifth of the book. The dark assessment header is a strong enough event without a page turn, and mid-page it arguably interrupts more decisively. 522 pages to 441 with not one word removed; pages under 40% full from 106 to 15, and most of those fifteen are designed full-page leaves the metric reads as empty.
Every level opens with its own contents	The level introduction carried the graduate profile and the purpose and filled 17% of its page — six times, each of them the page facing a level's first module. It now carries the ten modules of that level with their teaching counts and designed minutes, and closes on the award they confer. The global contents lists them eighty pages earlier; this is where a learner starting the level actually looks.
Long stage parentheticals set as notes	Ninety of the thousand stage parentheticals are not durations but sentences, up to 142 characters. Set as a timing badge they wrapped into a two-line italic block jammed against a two-line heading. Anything longer than a short phrase is now a note on its own line at the full measure.

ITEM	WHAT WAS BUILT
Figure text measured, not assumed	Every label in every figure is now measured as a rendered box against its own frame and against its neighbours. SVG has no layout engine: a label that runs past the edge is clipped in silence and one drawn at the same height as another simply prints through it. Four defects were found this way, in three of the seven figures — including the assessment map printing its last column as MAPPED TO COMPET, in the figure whose whole argument is that the column is empty.
The four-skills figure, withdrawn	Built, measured, and removed. It plotted four series that are flat at 38.8–40.8 per hundred items across all six levels, under a caption claiming reading and writing rise — reading is flat everywhere but Level IV and falls at Level VI. The lines are flat because every teaching lesson carries a stage for every skill, so the figure was measuring the ratio of teaching lessons to total items and could never have shown what it claimed. Figure 3 and the routes coverage table carry the finding properly.
Photographic credits completed	The colophon credited the six level plates while five further licensed photographs printed as section bands with no credit and no licence reference recorded anywhere in the source. Nothing was unlicensed; the record did not exist. All eleven are now credited with their references, and the test suite counts the placed images against the credits table so the two cannot drift apart again.
Two further licensed photographs	A dictionary thumb index opening the glossary and a revision desk opening the routes, so the reference apparatus at the back of the book carries the same photographic rhythm as the front. A third was licensed for the pronunciation strand and not used: a posed classroom with a bare-shouldered top, which fails the modesty requirement and does not match the observational direction of the other ten. The licence is spent; printing it would have cost more.
Table headings that survive a page break	thead is set to table-header-group and rows are kept whole, so the pronunciation strand and the revision route repeat their column headings on every page they continue onto instead of presenting a reader with three unlabelled columns of references.
Glossary of programme terminology	50 terms of art, defined as the field defines them and never as a claim about the College. Every headword is counted across the curriculum before it is printed and carries its first use and total; three proposed headwords were dropped because the curriculum does not use them.
Cross-reference system	191 structured references extracted from the PREREQUISITE KNOWLEDGE stages, printed as a "Builds on" line under each lesson title and in both directions on the module openers. 82 of them are cross-level, which required carrying the level context forward through each prerequisite sentence.
The spiral, measured (Figure 7)	All 60 modules weighted by the number of later lessons that name them. The programme described itself as spiral; this is the first edition in which a reader can test that.
A learner's path (Figure 6)	The module cycle, the ten modules of a level closing in an award, and the six-level ascent — the same shape at three scales.
The revision route	For all 60 modules, what that module's own revision and prerequisite stages send the class back to, set against the assessments it precedes.
The pronunciation strand	All 114 pronunciation stages collected in order, each printed as the curriculum's own sentence with its designed timing.
Pull quotes	48 module openers carry the module's own discussion prompt with its lesson reference, replacing a boilerplate paragraph that had been printed 60 times. Level I carries none: its prompts are instructions with a question inside them and do not stand alone, and the rule was not relaxed to reach a round number.
Module-opening visual system	A stage fingerprint drawn from the teaching moves each module actually uses, the level colour band, the cross-references in both directions and the pull quote — so no two openers are the same page.

ITEM	WHAT WAS BUILT
Editable edition brought level with the print edition	The seven figures rasterised and embedded, the six level plates graded through the print edition's own duotone filter, per-level colour identity, and the full apparatus: cross-references, glossary, routes, revision route and pronunciation strand.
Large-print variant	IEFC_TYPE_SCALE builds the whole book at any type scale from the same source; npm run curriculum:large produces it at 135%, 563 pages. Built on demand rather than committed, because the capability is the deliverable and the file is a second copy of the same book.
Subject index	251 subjects extracted from the titles the curriculum gives its own lessons, indexed by lesson reference rather than page so it survives reflow.
Vocabulary and phrase index	352 words, phrases and collocations taken from the terms the curriculum quotes in its own vocabulary stages, each pointing to the lesson where it is taught.
Assessment index	All 120 assessed items in one table per level, with question counts and references, for planning a term.
Teacher's introduction	"Teaching from This Book" — before the session, during it, assessing, and finding your way back. Describes only apparatus that exists.
Awards comparison table	"The Six Awards" — level, programme, CEFR band, award, post-nominal and standing side by side, printed from the award definitions.
Photography beyond the chapter openings	Three further licensed photographs as duotone bands at the head of the institutional sections, graded in the College's own blue rather than a level colour — the same construction one tier up.
Module study time	Designed minutes summed from the curriculum's own stage timings and printed on every module opener.

THE STANDARD APPLIED

Every register entry was tested against one question: can this be done here, with no new curriculum, no institutional decision and no external authority? Where the answer was yes it was built rather than recorded. What remains below is what the answer was no to — and for each, the reason is named.

Editorial Opportunity Register

Improvements the publication can make to itself — no new curriculum, no institutional decision. These should simply be done.

The legacy apparatus in the institutional flagship document

EDITORIAL

CURRENT STATE

Eight of the nine issued artefacts now carry the Press apparatus — family, maturity, issue code, citation form, cataloguing data and revision history. The institutional flagship document does not. It is produced through a different path: one block list rendered twice, to Word and to print, with a test comparing the two token by token. Injecting HTML into the print side alone would break that comparison, which is the guard that keeps the two artefacts identical.

OPPORTUNITY

Express the apparatus as blocks rather than as HTML, so both renderers emit it and the token comparison still holds. The readiness table in the Press volume shows this publication failing three properties until that is done, which is the correct behaviour: the gap is visible in print rather than recorded in a file nobody opens.

Impact Medium — one publication of nine is outside the record apparatus. · **Effort** Medium — three new block kinds and a rebuild of both artefacts.

Edition history

EDITORIAL

CURRENT STATE

The identity block carries edition, revision and issue codes; there is no page recording what changed between editions, because there is not yet a previous edition to record a change from.

OPPORTUNITY

Deferred by design rather than outstanding. From the second edition onward a short edition history is standard in a reference work and is the reader's only way to know whether their copy is current. The apparatus to generate it already exists: the content digest changes whenever any lesson does.

Impact Medium · **Effort** Low

Per-module photography

EDITORIAL

CURRENT STATE

Sixty module openers, each with a stage fingerprint, colour band, cross-references and — for 48 of them — a pull quote. No photography.

OPPORTUNITY

The visual system is built and the photography is not, for one reason: sixty licensed editorial photographs is a licensing budget, and repeating the nine images this edition holds across sixty openers would read as a shortage rather than a series. This is an external-licensing item, not an editorial one.

Impact Low · **Effort** High

Curriculum Enhancement Register

Where the curriculum itself could be stronger. Every entry needs qualified academic authoring; none may be filled editorially.

Lesson-level depth against the published figure

ACADEMIC AUTHORIZING

CURRENT STATE

The curriculum holds 294 authored items. The College's public materials state 720 learning units.

OPPORTUNITY

Either author the remaining items, or correct the public figure. Both are legitimate; leaving the two numbers to disagree is not. See the Governance Register.

Impact Critical · **Effort** High

Stage-name consistency

ACADEMIC AUTHORIZING

CURRENT STATE

Twelve stage names occur exactly 114 times each — once in every teaching lesson, which is strong evidence the house structure is real. A further 83 names occur in a long tail.

OPPORTUNITY

Some of that tail is deliberate variation and some is almost certainly two authors naming the same teaching move differently. Reconciling it would tighten the programme and shorten the anatomy chart's tail. Measured, not guessed: the figure is in Figure 3 of the publication.

Impact Medium · **Effort** Medium

The collocation strand stops at the consolidation modules

ACADEMIC AUTHORIZING

CURRENT STATE

Phrasal verbs, collocations and discourse markers are set out in the opening item of 56 of the 60 modules. The four without are III.10, IV.10, V.10 and VI.10 — the review and consolidation module at the end of Levels III to VI. Levels I and II carry one in their tenth module; the upper four do not.

OPPORTUNITY

This may be deliberate — a consolidation module reviews what has been taught rather than introducing a further lexical set — or it may be drift between the levels authored earlier and those authored later. The publication states the fact and does not decide which, because deciding is an academic judgement about the design of a consolidation module.

Impact Low · **Effort** Low

Reflection, self-assessment and mastery checklists

ACADEMIC AUTHORIZING

CURRENT STATE

Not present in any lesson.

OPPORTUNITY

Genuinely valuable pedagogically and genuinely absent. Must be authored by academics against the existing objectives — generating them from lesson text would produce plausible prose that no one had validated as assessment instruments.

Impact High · **Effort** High

Portfolio and collaborative tasks

ACADEMIC AUTHORIZING

CURRENT STATE

Not present as named stages, though speaking and writing tasks exist throughout.

OPPORTUNITY

Several existing writing tasks would serve as portfolio pieces with an authored wrapper defining what is collected and how it is judged.

Impact Medium · **Effort** Medium

Pedagogical Enhancement Register

Learning support that can be built around the curriculum without altering or inventing it.

A grammar route through the programme

ACADEMIC AUTHORIZING

CURRENT STATE

The curriculum names a grammar stage exactly once, at VI.10.1 — GRAMMAR CONSOLIDATED ACROSS LEVEL VI — which is a revision summary rather than a strand. The prerequisite stages name grammar points in parentheses ("Module 2 ("there is/are", possessive groundwork)") throughout, so the material to build one exists.

OPPORTUNITY

Every other route in the published edition is a filter on a named stage that any reader can re-run. A grammar route would mean deciding which of the language points in each of 294 items counts as grammar — a subject-matter judgement that would be set in the same type as the verifiable routes and would not be the same kind of thing. It belongs to the Board, and the published edition says so on the page rather than leaving the absence to be noticed.

Impact High · **Effort** Medium

Assessment guidance for markers

GOVERNANCE

CURRENT STATE

All 60 rubrics are printed with 307 criteria. There is no guidance on applying them consistently between markers.

OPPORTUNITY

Inter-marker reliability guidance is a real institutional need. Writing it requires the Board to set the standard first — it cannot be inferred from the rubrics.

Impact High · **Effort** Medium

Reader Experience Register

How the volume behaves in the hands of the person using it.

Running heads do not identify the level

TOOLING LIMIT

CURRENT STATE

A single running head runs throughout. Partly mitigated: every lesson header now carries its full reference (IV.7.3), every module opener names its level and CEFR band, and the cross-references beneath each lesson title are in the same numbering — so a reader opening at random is never more than a few lines from knowing where they are.

OPPORTUNITY

The running head itself is still the same on every page. Chromium cannot vary a running head by page side or section in its print pipeline — verified, not assumed — so closing this needs either a different tool or a printed thumb-index on the page edge, which needs bleed, which this pipeline also cannot produce.

Impact Medium · **Effort** High

Level thumb index

TOOLING LIMIT

CURRENT STATE

Not present.

OPPORTUNITY

A block of colour bleeding off the outer edge, stepping down the page as the levels progress, would make the six levels findable with the book closed. This is a classic reference-book device and needs no new content — but it requires bleed, which this pipeline cannot currently produce.

Impact Medium · **Effort** Medium

Visual Enhancement Register

Including one opportunity considered and deliberately declined, recorded so it is not repeatedly re-proposed.

Plates do not bleed to the trim

TOOLING LIMIT

CURRENT STATE

The six plates fill the type area and stop at it.

OPPORTUNITY

Full bleed is not achievable in this rendering pipeline: any element wider than the page content box makes the engine scale the entire document. If the book is ever originated in a professional layout application, restore full bleed there.

Impact Medium · **Effort** High

Publishing Improvement Register

The apparatus of a published work, and the steps between this file and a printed book.

No ISBN, DOI or legal deposit

GOVERNANCE

CURRENT STATE

Printed as unassigned, with the issuing authority named.

OPPORTUNITY

An ISBN is inexpensive and makes the volume orderable and catalogable. A DOI makes it citable. Both require the College to apply; neither can be self-issued.

Impact High · **Effort** Low

Never proofed on paper

PRODUCTION

CURRENT STATE

Every finding in this project is measured from source. Nothing has been read on a printed sheet.

OPPORTUNITY

Six checks in the production specification cannot be verified any other way — guilloché line weights at the chosen screen ruling, spot UV trap, show-through on tinted module openers, and whether the QR scans off matt laminate.

Impact Critical · **Effort** Low

CMYK values are uncalibrated

PRODUCTION

CURRENT STATE

The colour specification prints a naive conversion and says so.

OPPORTUNITY

Convert against the printer's ICC profile and re-proof the blues, which drift furthest.

Impact High · **Effort** Low

Future Development Register

Longer-horizon work, most of it gated on institutional decisions rather than effort.

Competency mapping

GOVERNANCE

CURRENT STATE

0 of 120 assessments are mapped to any named competency.

OPPORTUNITY

This is the element that distinguishes the IEFC from a CEFR course, and it is the founding task of the Board of Academic Standards and Curriculum Excellence. Until it exists the public definition should not assert it.

Impact Critical · **Effort** High

Credit value and total qualification time

GOVERNANCE

CURRENT STATE

Not assigned. Duration in months is printed instead.

OPPORTUNITY

Credits and TQT are assigned by an awarding framework the College has not entered. Printing a figure would imply a framework that does not exist.

Impact High · **Effort** High

Career and professional outcomes

GOVERNANCE

CURRENT STATE

Not authored, and no outcome data exists.

OPPORTUNITY

Naming the roles a CEFR band qualifies someone for is a claim about the labour market. It requires evidence the College does not hold, and should not be written until it does.

Impact Medium · **Effort** High

A Foreword by an officer of the College

GOVERNANCE

CURRENT STATE

A President and a Board are now appointed, and the Academic Senate is constituted. The preface is still issued unsigned by the publisher, because a signed Foreword is a text somebody writes rather than a field the renderer can fill.

OPPORTUNITY

A signed Foreword is the single strongest institutional signal a publication of this kind can carry, and it is now available to be written rather than blocked.

Impact High · **Effort** Low

Translated and localised editions

GOVERNANCE

CURRENT STATE

English only.

OPPORTUNITY

The platform already serves an Arabic interface. The curriculum apparatus — stage names, rubric criteria, front matter — is separable from the English content a learner is studying, so a bilingual teacher's edition is feasible.

Impact Medium · **Effort** High

GOVERNANCE

Decisions only the institution can take

Nothing in this list can be resolved by writing text, and the first two are the reason this document exists rather than a longer front matter.

DECISION	URGENCY
Reconcile the published 720-unit figure Public materials state 720 learning units across the qualification; the curriculum holds 294 authored items. The publication states its own counts truthfully and no longer comments on the discrepancy — which means the public figure is now the only place the overstatement appears, and it must be corrected there or met by authoring.	Immediate
Competency verification in the public definition The adopted definition asserts that the IEFC extends CEFR proficiency through competency verification. No assessment is mapped to a competency. Either establish the mapping or qualify the definition wherever it is published.	Immediate
Constitute the Board of Academic Standards and Curriculum Excellence Established but not constituted. It is the body that would own the competency mapping, the stage-name reconciliation and inter-marker reliability.	High
Commission a signed Foreword The officers are appointed; the Foreword is not written. The publication carries no signed message because nobody has yet composed one, and this repository will not compose words on a named person's behalf.	Medium
Apply for an ISBN and a DOI Neither can be self-issued. Both are inexpensive and both materially change how the volume can be distributed and cited.	Medium
Approve the photography policy Six licensed editorial photographs are used as level plates, credited in the colophon and explicitly not presented as records of the College. Confirm this is the institution's standing position before the edition is distributed.	Medium

WHAT REMOVING THE PUBLIC REGISTER CHANGED, EXACTLY

The public edition previously stated that the College's materials claim 720 learning units and that the figure is not met. It no longer says so. The book still prints its own counts truthfully — 294 authored items — but it no longer draws attention to the discrepancy, which means **the 720 figure is now unchallenged wherever it is published**. That is an acceptable editorial decision only if the figure is corrected at source or met by authoring. Until one of those happens, the overstatement lives on unqualified, and this paragraph is the only record that it was a deliberate choice rather than an oversight.

The definition, audited

The College defines the IEFC as an advanced academic qualification built on CEFR proficiency and extending it through competency verification, leadership, professional communication, critical thinking, authentic assessment, and independently verifiable digital credentials. Each element is assessed below against the evidence present in the academic database. This table was previously printed in the public edition and has been moved here — it is a quality instrument, not a marketing one.

ELEMENT OF THE DEFINITION	POSITION
Built on CEFR proficiency	Evidenced
Extended through competency verification	Not evidenced
Extended through leadership	Partial

ELEMENT OF THE DEFINITION	POSITION
Extended through professional communication	Evidenced
Extended through critical thinking	Evidenced
Extended through authentic assessment	Evidenced
Independently verifiable digital credentials	Partial

Derived from the academic database at generation. Where an element is *not evidenced*, the College's position is that it is intended and not yet demonstrated. The public edition no longer asserts those elements; it describes what the curriculum demonstrably contains.

STANDING

What the publication may and may not claim

SAFE TO STATE — VERIFIED AT GENERATION

Six levels; 60 modules; 294 authored items; 660 assessment questions each printed with its answer key; sixty grading rubrics carrying 307 criteria; 81,991 words of lesson content; a uniform architecture of ten modules per level each ending in an assessed quiz and an assessed assignment; designed study time summed from the curriculum's own stage timings.

MUST NOT BE STATED UNTIL IT BECOMES TRUE

Accreditation, recognition or external approval of any kind. Competency verification as a demonstrated property. Credit value or total qualification time. Career or employment outcomes. 720 learning units. Any named officer, partnership, ranking or statistic not held in the College's own records.

THE RECORD

This publication in the WEC Press record

Every publication of the Press carries this apparatus, generated from one source, so that a reader in twenty years can identify this copy, cite it, catalogue it, and find the publications it belongs beside — without needing anyone who made it.

Place in the ecosystem

ISSUE	E01.R00.01 — edition 01, revision 00, impression 01
FAMILY	WEC Governance Series
WHAT THE FAMILY IS FOR	How the College publishes, produces and regulates. Includes the documents that bind the Press itself.
MATURITY	First edition
WHAT THAT MEANS	One edition issued. It has not been reviewed by anyone other than its makers, and a reader should weigh it accordingly.

RIGHTS AND PERMISSIONS

What you may do with this volume, and the little that is reserved.

Read it, print it, photocopy it, quote it and teach from it, freely and without asking. Do not stand it up as another institution's programme, sell it, or take the College's name off it.

GRANTED, WITHOUT ASKING AND WITHOUT CONDITIONS

- Read it, download it, keep it, and print it.
- Photocopy it, in whole or in part, for a class you teach.
- Quote from it, at any length reasonable to your argument, with the volume named.
- Cite it, set it on a reading list, and hand it to a colleague.
- Teach from it, including in another institution's classroom.
- Translate a passage for a learner who needs it in their own language.

RESERVED TO THE COLLEGE

- Adopting a volume, or the curriculum it sets out, as the syllabus or scheme of work of another institution, programme or course of study.
- Republishing, mirroring, hosting or redistributing a volume, whole or in part, anywhere other than from the College's own address.
- Selling a volume, charging for access to it, or bundling it with anything sold.
- Producing an adapted, abridged, re-sequenced or derivative curriculum from it, or a translated edition of a whole volume.
- Removing or obscuring the College's name, the running attribution, the edition mark, or this notice.
- Using a volume as training data for a machine-learning model, or ingesting it into a dataset offered to others.
- Issuing any award, certificate, level statement or transcript in reliance on these volumes. The qualification is the College's to confer and nobody else's.

Permission for any reserved use is given in writing, and is usually given. Write to rights@worldwideenglishcollege.com with the volume, the use and the institution. A school that asks is a colleague; the College has no interest in refusing a teacher who wants to do the work properly.

TRACEABILITY

Every page of every volume carries the volume title, the College's name and an edition mark computed from the curriculum content of that edition. Material taken from these volumes is therefore identifiable as to volume, edition and page, whether it is reproduced, retyped or paraphrased around. The College reads the field it publishes into, and it will pursue a reserved use it finds unlicensed.

WHAT IS NOT CLAIMED

This volume is not encrypted and its text is not disabled against selection, extraction or printing. The College considers a document that a reader cannot copy to be a document a reader cannot use, and considers the permission flags a file can carry to be advisory rather than protective. The protection here is a stated licence, attribution on every page, and a traceable edition mark — not a lock.
