

The Ten-Year Institutional Roadmap

*Strategic Charter and Financial Master Plan,
prepared for the Board.*

PARTS	LEAVES	PATHWAY	CLASSIFICATION
Seven	45	A1 to C2 · 1,200 hours	Planning instrument

WHAT IT TEACHES	A complete A1 to C2 qualification pathway in six levels.
ACADEMIC HOURS	1,200 · 200 a level
CREDITS	120 · 20 a level
THE AWARD	Six qualifications, one conferred at each level. A learner who stops after two holds two.
EXAMINATION	Set against a rubric published before the work, marked by a named person, marked a second time independently, and moderated across the cohort.
REGISTRY	Every conferral entered the same day and checkable by a stranger, without an account, for as long as the College exists.
THE ADOPTED FEE	\$19,000 for the complete pathway – \$3,167 a level, in 4 instalments across 4 months. Published, with every cent of it accounted for.
RE-SITS	One included on either route. There is no re-sit fee.
WITHDRAWAL	A full refund inside 14 days of enrolment.
CAMPUS	London.
THIS PLAN	The decade 2027–2036, prepared for the Board.
WHAT IS NOT HELD	<i>No accreditation, ranking, institutional partnership or external endorsement. No completed cohort. No External Examiner has confirmed the standard.</i>
EVERY FIGURE	Computed by one engine from four files and reconciled as a test on every build. None is typed into a page.

The College sells *teaching*, not a credential. The credential is identical whichever route a candidate takes to it. What differs, and what costs money, is *human attention*.

The Proposition

I | The Proposition

What the Board is asked to resolve, and the three decisions the rest of this document exists to inform.

Resolution one

Every dollar collected

The revenue-allocation framework

Resolution two

63% of learners

The tariff solved from it

Resolution three

37% of learners

The two institutional channels

Each resolution drawn against what it governs. The framework governs every dollar collected; the tariff sets the price 63% of learners pay; the two channels carry the rest.

Three resolutions

7

Where every dollar is governed

9

NOT A DECISION

The Board of Academic Standards has no appointed members and no External Examiner has been appointed. Both are appointments rather than engineering tasks, and until they are made the College cannot confer.

STATUS

BOARD DECISION REQUIRED

Three resolutions

This plan asks for three decisions and no others. Everything else in it is either a fact about the College, which is marked as one, or a consequence of arithmetic the Board can check.

ONE · THE REVENUE-ALLOCATION FRAMEWORK

That gross collected revenue be governed as 25% payroll, 5% technology, 10% operating, 10% marketing, 25% reserve, 25% strategic. The two retained lines are designated institutional capital; the Strategic and Founders' Allocation is **not** automatically withdrawable income, and no distribution from it is modelled anywhere in this plan.

TWO · THE TARIFF THAT FOLLOWS FROM IT

That the tariff be set at the cheapest point satisfying that framework – a Tutored pathway at **\$27,900**. The price is the output of the framework rather than a management preference, and it moves if the framework moves.

THREE · THE TWO CHANNELS THE PORTFOLIO LACKS

That the College open Corporate and Institutional agreements at its own published partner bands. A purely retail College could not bring acquisition below 22% of revenue against a 10% target, because a cost incurred one learner at a time never amortises.

THE GOVERNING FINANCIAL LAW

Where every dollar is governed

Four lines consumed running the institution; two retained as capital above the struck rule.

HOW THE ELEVATION IS READ

The shaft is what running the institution consumes, hatched at a density proportional to its weight: payroll heaviest, technology lightest. The struck gold rule is the division. Above it, ruled rather than hatched, is what is *held* – because those two lines are not spent.

Half of every dollar collected is retained. 25% is restricted or designated institutional capital; the other 25% is a Board-
authorised discretionary allocation, and it is **not** automatically withdrawable income. No distribution from it is modelled anywhere in this plan.

The tariff is solved from this drawing rather than the other way round. Move a course and the price moves with it.

BOARD DECISION REQUIRED

 Proposed governance targets, not a historical result. data/masterplan.json § revenue_allocation_framework.

CONSUMED	RETAINED	TARIFF IT SOLVES TO	STANDING
50% Payroll, technology, operating, marketing	50% Reserve and Strategic, held as capital	\$27,900 A Tutored pathway, A1 to C2	Proposed Board decision required

WHAT IT PRODUCES

The decade

Net tuition as ruled columns; surplus against the year it crosses nil.

TWO REGISTERS, TWO QUANTITIES

The upper register is net tuition, year by year, as ruled columns. The lower is surplus against its own nil rule, on its own baseline – drawn separately because a ten-million-dollar revenue and a first-year deficit on one plot make the second invisible.

The year the institution turns is ruled through both. Before it the College is consuming capital; after it, generating it.

Revenue is recognised in the year it is *taught*, not the year it is sold, which is why the curve lags the admissions behind it.

MODELLED

 Strategic projection, not a trading record.

TEN-YEAR REVENUE

\$95.5M

Recognised in the year taught

TEN-YEAR SURPLUS

\$37.4M

Before any distribution

LEARNERS ADMITTED

17,864

39,164 awards conferred

URNS

2029

Cumulative surplus crosses nil

The Institution

What the College is, what it sells, and the discipline that makes both statements checkable.

Six levels of 200 academic hours, each conferring its own award, climbing from A1 to C2. Adopted and published — data/tuition.json.

What the College is, and what it holds	11
The six qualifications	13

WHAT IS NOT CLAIMED

No accreditation, no ranking, no institutional partnership, no external endorsement. No completed cohort. No External Examiner has confirmed the standard.

THE PATHWAY

1,200 academic hours · 6 levels · 120 credits · A1 to C2

Identity

WorldWide English College teaches a 1,200-hour qualification pathway in six levels from A1 to C2, examined against rubrics published before the work, second-marked, moderated, and entered in a registry a stranger can check without an account.

The credential is identical whichever route a candidate takes to it – same examination, same rubric, same second marking, same moderation, same registry entry, same public verification. The routes differ in price by a factor of thirty-eight because what they differ in is *human attention*, which is the only thing here that actually costs money.

WHAT IT DOES HOLD

A complete six-level curriculum; an examination architecture with second marking and moderation; a published fee decomposition accounting for every cent of a fee; a conferral and verification chain; and fourteen typeset volumes of its own curriculum and assessment work, free to anyone, enrolled or not.

THE DISCIPLINE

Every figure in this publication is computed by one engine from four files. None is typed into a page, and the reconciliation is run as a test on every build rather than asserted as a claim.

THE ACADEMIC ARCHITECTURE

Six gates, and what passes each

The College's own plate, drawn in engraved line.

THE SIX GATES

Every one of them is necessary. A classification never overrides a gate.

■ MET BY YOUR WORK ■ A RECORD THE COLLEGE MAKES

Where a gate waits on the College's own record, your record says so and marks the gate as the College's.

WHAT A GATE IS

Each level ends at an examination set against a rubric published before the work begins, marked by a named person, marked a second time independently, and moderated across the cohort. Nothing passes on attendance, and nothing passes on a tutor's recommendation alone.

A candidate who does not pass sits again; one re-sit is included and there is no re-sit fee on either route. A candidate who passes is entered in the registry the same day, and the entry can be checked by anyone, without an account, for as long as the College exists.

The six qualifications

6 levels of 200 academic hours and 20 credits each.

CODE	CEFR	QUALIFICATION	HOURS	CREDITS
ECIC	A1	English Communication Introductory Certificate	200	20
HCIC	A2	Higher Communication Introductory Certificate	200	20
CAEC	B1	Certificate in Applied English Communication	200	20
HCAEC	B2	Higher Certificate in Applied English Communication	200	20
ACEC	C1	Advanced Certificate in English Communication	200	20
WEPC	C2	WorldWide English Proficiency Certificate	200	20
COMPLETE A1–C2 PATHWAY			1,200	120

VERIFIED

Adopted and published — data/tuition.json.

WHY SIX, AND WHY THIS SIZE

A level is 200 academic hours because that is roughly what the Common European Framework takes to move an adult one band, and because 4 instalments across 4 months is a commitment a working adult can actually make.

Each level confers its own award. A learner who stops after two holds two qualifications rather than a fraction of one, which is the difference between a pathway and a course somebody abandoned.

The credential is identical on every route. What a route changes is how much of a named instructor's attention the candidate receives on the way to it – and that, not the certificate, is what the tariff is pricing.

The Market

What comparable programmes actually charge, what that did to an earlier draft, and the four markets the research could not answer.

Five segments by reachable population. A ruled and hatched segment carries a direct published observation; an outlined one is modelled from the segments that do.

What the research did to the plan	15
What comparable providers charge	17
Where the evidence does not exist	19

WHAT THE RESEARCH DID TO THE PLAN

Assumed against researched

Price of a complete pathway at which a segment converts at its reference rate.

WHAT THE RESEARCH MOVED

Each line runs from what an earlier draft assumed a segment would pay to what the published evidence says it will. **Four of the five moved, and none of them upwards.**

West Africa moved by nearly a factor of three, and that single correction removes more demand from the model than every other change combined. A Lagos IELTS course is about forty-nine dollars a month; the whole published Nigerian range tops out near eighteen hundred.

The plan this replaced projected \$61.6M of revenue on the assumed figures. It is recorded in data/masterplan.json rather than quietly replaced, because an undocumented correction gets re-proposed six months later by somebody who does not know it was already made.

MODELLED Willingness to pay is an inference from published tariffs, not an observation of it.

SEGMENTS MOVED

Marked as modelled

Four markets and one central question the research could not answer.

MARKET OR QUESTION	STATUS	WHAT THE MODEL DOES INSTEAD
Qatar, Kuwait, Bahrain, Oman	MODELLED	No published provider tariffs found. Modelled at Saudi/UAE levels, which is an assumption about four distinct markets and is marked as one.
Ghana and wider West Africa beyond Nigeria	MODELLED	Scaled from the segments that carry direct observations.
North America	MODELLED	Not a founding market in the roadmap; not researched in depth.
Asia and rest of world	MODELLED	Scaled from the segments that carry direct observations.
Willingness to pay for a MULTI-YEAR credentialed English pathway	INSUFFICIENT DIRECT EVIDENCE	Pathway prices are built up from per-level comparables rather than read off a competitor.

data/market-evidence.json § gaps.

REJECTING WELL IS MOST OF THE JOB

Thirty candidate sources were pulled and eight shipped. What did not survive is recorded beside what did, because an undocumented rejection gets re-proposed six months later by somebody who does not know it was already considered.

Four markets carry no direct observation at all. They are modelled from the segments that do, and marked as modelled on every page they appear. The plan does not convert an absence of evidence into a number and hope nobody checks.

No provider found sells a six-level, 1,200-hour credentialed pathway as one purchase. *WEC-LC's product does not have a market price, because the product is not on the market.*

That is why this plan prices per level and per hour of a named instructor's attention rather than comparing pathway totals. A pathway total has no comparable. An hour of a qualified teacher's attention has one everywhere.

IV

The Commercial Architecture

What WEC-LC charges, solved backwards from the financial law the Board has set — and not chosen.

Six tiers of one order, each marked with its multiple of the \$3,600 entry price. The credential conferred is identical on every route; what the multiple buys is a named instructor's attention.

The proposed tariff	21
What one negotiation buys	25

Management’s proposed commercial architecture

Complete A1–C2 pathway. The adopted tariff remains \$19,000 until the Board resolves otherwise.

TIER	WHAT IT BUYS	CONTACT	ATTENTION	PATHWAY
Independent	Examination, moderation and the award. No teaching.	0	17	\$3,600
Directed	Seminar teaching in a group of fourteen, with marked work.	144	42	\$17,100
Tutored	A named instructor, individual tutorials, every piece marked.	192	122	\$27,900
Executive Core	A cohort of six, scheduled around professional obligations.	228	183	\$50,400
Executive Premium	One to one throughout, with a named academic adviser.	240	348	\$82,800
Executive Bespoke	One to one, on material authored to the holder’s own field.	288	443	\$136,800
Corporate	The Executive Core pathway, less the adopted 15% band.	228	183	\$42,840
Institutional and Sponsored	The Tutored pathway, less the adopted 20% band.	192	122	\$22,320

Independent is adopted and published. Every other figure is

PROPOSED — NOT ADOPTED

 — solved from the allocation framework.

THE COMPARISON THAT SURVIVES

Per hour of individual attention

The only like-for-like unit available, and each tier against the comparable it actually has.

TWO COMPARABLES, NOT ONE

A pathway total has no comparable, because no provider found sells a six-level credentialed pathway as one purchase. An hour of a qualified teacher’s attention has one everywhere.

But not the *same* one. A British Council module is group language teaching; an Executive Bespoke pathway is one-to-one provision, whose market is executive coaching at two to six hundred dollars an hour. The gold rule is the first comparable and the hatched band is the second, and each tier is read against the one it actually has.

One tier fails both. It is named on the page opposite rather than left for a reader to find.

PROPOSED — NOT ADOPTED Tariff solved from the allocation framework; the adopted fee is unchanged.

PUBLISHED BENCHMARK	COACHING BAND	TIERS INSIDE THEIR COMPARABLE	THE EXCEPTION
\$284 British Council Saudi, per attention hour	\$200–600 One-to-one provision	5 of 6 Each judged against the right one	Directed \$404 an attention hour

DIRECTED, STATED PLAINLY

At \$404 an hour of attention and \$119 a contact hour, Directed is dearer than the British Council on both measures. It is the one tier in the tariff that cannot be defended on price.

What the figure shows

Independent and Tutored sit below the British Council's published Saudi tariff per hour of individual instructor attention, and confer an award the module does not. All three Executive tiers sit inside the executive coaching band of \$200 to \$600, which is the right comparable for one-to-one provision and the wrong one to have ignored.

AND THE TIER THAT DOES NOT

Directed is dearer than the benchmark on both measures. An earlier draft of this plan claimed the College was cheaper at every tier; that was true at a lower tariff, was never re-checked when the price rose, and is false. It survived a table of six numbers and did not survive being drawn.

Directed's defence is therefore not its hourly rate. It is that the fee carries the examination, second marking, moderation, the registry entry and the conferral, none of which a language module includes. Management states that rather than a price advantage it does not have.

WHY THE CHANNELS EXIST

What one negotiation buys

Acquisition paid per learner never amortises; paid per agreement it divides by the seats it carries.

ACQUIRED ONE AT A TIME		
Gulf executive	☐	\$2,100
Gulf professional	☐	\$1,250
UK and Europe	☐	\$980

ONE NEGOTIATION, MANY SEATS		
Corporate	☐	\$641
20 agreements × 15 seats		
Institutional	☐	\$399
8 agreements × 105 seats		

5.3× cheaper to acquire a seat through an agreement than a Gulf executive one at a time.

WHY THE CHANNELS EXIST

Acquisition paid one learner at a time never amortises: the cost of finding the next Gulf executive is the cost of finding the last one. Paid per agreement it divides by the seats the agreement carries, and a single negotiation can carry twenty-five to ninety-nine.

Swept across a twelvefold price range and a sixteenfold range of scale, a purely retail College could not bring acquisition below twenty-two per cent of revenue against a 10% target. No price fixes that. The missing channels were the structural answer.

The bands used here are the College’s own published partner bands, not invented ones.

MODELLED data/commercial.json § routes.partner.

DEAREST RETAIL SEAT	CHEAPEST AGREEMENT SEAT	MULTIPLE	RETAIL-ONLY FLOOR
\$2,100	\$399	5.3×	22%
A Gulf executive, acquired singly	One negotiation, many seats	Cheaper per seat	Against a 10% target

Three architectures, one basis

The same demand model, delivery costs, acquisition budget and capacity gate. Only the price differs.

ARCHITECTURE	REVENUE	SURPLUS	LEARNERS	HOLDERS
Brief A — \$7,400 / \$14,800	\$68.2M	−\$10.1M	19,664	16,320
Adopted flat \$19,000	\$80.5M	\$8.6M	16,040	13,313
PROPOSED	\$95.5M	\$37.4M	17,864	14,828

The institutional channels removed the trade an earlier draft was built around: the proposal now earns more on every dimension than the adopted flat tariff.

WHAT CHANGED, AND WHY THE COMPARISON DID

An earlier draft reported a genuine trade: the proposed portfolio reached more learners than the adopted flat tariff and gave up surplus to do it. The plan said so, and a test in the build forbade it from claiming otherwise.

Adding the institutional channels removed the trade. A sponsored cohort reaches people a retail price cannot and pays acquisition once for all of them, so the

proposal now earns more revenue, more surplus, more learners and more awards at the same time.

The test was inverted rather than deleted. It checks the shape of the comparison instead of its direction, because a guard that forbids a true claim is as bad as one that permits a false one.

V | The Financial Architecture

Where every dollar of collected revenue is governed, and what each line is forbidden from becoming.

Consumed running the institution

Retained as institutional capital

One column of collected revenue, divided. Four courses are consumed running the institution; the two beyond the struck rule are retained as institutional capital and are not distributable income.

What each line is, and is not	27
The decade	29

DEFINITIONS

What each line is, and is not

Payroll

25%

All employed people: academic delivery, examinations, registry, admissions, student support, platform engineering, academic standards, finance and compliance, and institutional leadership, inclusive of on-costs.

LMS and Technology

5%

The learning platform, hosting, authentication, storage, media, security and the tooling the College runs on. Salaries of the people who build it sit in Payroll.

Operating Expenses

10%

Legal, accounting, insurance, audit, professional services, the London registered office, examinations administration, and institutional administration.

Marketing and Student Acquisition

10%

Media, content, campaigns, partnership development and the admissions conversation – the cost of being found and understood. Salaries of the people who do it sit in Payroll.

Institutional Reserve

25%

Restricted or designated institutional capital retained to strengthen liquidity, fund major institutional initiatives, absorb exceptional shocks, support future expansion, and maintain long-term financial resilience.

Not distributable. Not a surplus line. Not available to fund ordinary operating shortfalls without a recorded Board resolution.

Strategic and Founders' Allocation

25%

A discretionary institutional allocation available for founder remuneration, strategic investment, expansion, intellectual property development, new campuses and markets, acquisitions, exceptional executive compensation, and other Board-authorised strategic purposes.

NOT automatically withdrawable founder income, and the plan never presents it as profit. Any distribution from it is a separate Board decision on a separate occasion.

The Core Management Plan, year by year

Revenue recognised in the year it is taught.

YEAR	ADMITTED	TAUGHT	NET TUITION	DELIVERY	SURPLUS
2027	100	100	\$0.4M	\$0.1M	-\$0.2M
2028	327	354	\$1.4M	\$0.5M	-\$0.0M
2029	608	694	\$2.8M	\$1.0M	\$0.7M
2030	991	1,150	\$4.8M	\$1.7M	\$1.5M
2031	1,519	1,778	\$7.4M	\$2.6M	\$2.8M
2032	2,298	2,695	\$11.2M	\$4.0M	\$4.5M
2033	2,862	3,463	\$14.8M	\$5.3M	\$6.2M
2034	3,053	3,801	\$16.6M	\$5.9M	\$7.2M
2035	3,053	3,851	\$17.0M	\$6.1M	\$7.4M
2036	3,053	3,851	\$17.0M	\$6.1M	\$7.4M
TEN YEARS	17,864	peak 3,851	\$93.4M	\$33.4M	\$37.4M

MODELLED

 Strategic projection, not a trading record.

Three scenarios

Conservative is not a haircut on Core: weaker continuation, narrower reach, dearer acquisition.

SCENARIO	REVENUE	SURPLUS	YEAR-10	LEARNERS	TO C2
Conservative	\$59.0M	\$16.9M	\$10.3M	13,582	935
Core Management Plan	\$95.5M	\$37.4M	\$17.4M	17,864	2,318
High Growth	\$124.4M	\$54.1M	\$23.1M	20,449	4,058

The Core Plan is management’s recommended execution case, not the midpoint of the other two.

WHAT A SCENARIO HAS TO CHANGE TO BE ONE

A scenario set whose only variable is “more students” tests nothing. Each of these changes something the College would actually have to do differently: what it costs to be found, how many learners continue from one level to the next, and how far the College can reach at all.

The Conservative case does not reach cumulative surplus inside the decade. That is stated rather than smoothed, because it is the plan’s real exposure – the Core case requires continuation and reach to hold broadly as modelled, and reach is the one quantity here that was never researched.

VI | The Decade

Five phases, twenty risks each with a warning somebody can observe, and who decides what.

Ten years of net tuition, with 2029 struck — the year cumulative surplus first crosses nil. A strategic projection, not a trading record.

Five phases	31
The risk register	33
Governance and authority	38

Five phases, and what has to be true at the end of each

●	I Foundation Open the Gulf and West Africa. Appoint the academic offices. Publish the first examination papers and confer the first awards. Prove the qualification end to end before spending to be known. 354 under instruction · \$1.4M net tuition	YEARS 1–2
●	II Validation Europe opens. Break-even is cleared and the reserve begins. Continuation, not acquisition, becomes the measure that matters. The External Examiner confirms the standard against published rubrics. 1,150 under instruction · \$4.8M net tuition	YEARS 3–4
●	III Scale Asia opens. Sponsored cohorts become a material and deliberate share of enrolment — one negotiation carrying a cohort at a published band rather than learners acquired one at a time. The establishment is fully staffed and the institution stops depending on any one person. 3,463 under instruction · \$14.8M net tuition	YEARS 5–7
●	IV Maturity Reserve builds toward its target in months of operating cost. Accreditation is pursued with a completed cohort and an examiner's confirmation behind it, not before. 3,851 under instruction · \$17.0M net tuition	YEARS 8–9
●	V Standing The institution is self-funding, externally examined, internationally enrolled, and holds a register of awards a stranger can check without an account. 3,851 under instruction · \$17.0M net tuition	YEARS 10

WHERE ATTENTION GOES

Twenty risks, placed

Likelihood against impact. A register is a list; a matrix is a judgement.

9 of 20 stand above the line – likely enough to expect, heavy enough to plan for.

WHAT THE PLACEMENT SAYS

A register is a list and a matrix is a judgement. Each cell carries the number of risks placed in it and a hatch proportional to that number; an empty cell is ruled rather than left blank, so that nothing looks forgotten.

The struck gold line encloses the region the Board would actually watch: likely enough to expect, and heavy enough to plan for. What stands inside it is the count the plate closes on.

Every risk overleaf carries an early warning somebody can observe and an owner who is named in the governance schedule.

Authored judgement, not computed.

RISKS PLACED	ABOVE THE LINE	WITH AN EARLY WARNING	OWNERS
20	9	20	Named
Every domain of the plan	Likely enough, heavy enough	Something somebody can observe	In the governance schedule

The institutional risk register

Each with an early warning somebody can actually observe.

DOMAIN		RISK	L	I	EARLY WARNING
Enrolment	Acquisition cost rises faster than modelled as the Gulf market matures	Medium		High	Cost per enrolled learner exceeds plan for two consecutive quarters
Concentration	Gulf revenue share becomes a dependency rather than a strength	Medium		High	Any single market exceeds 45 per cent of net tuition
Academic capacity	Instructors cannot be recruited at the pace enrolment demands	Medium		High	Learner-to-instructor ratio exceeds the published teaching allocation for one term
Academic quality	Second-marking divergence rises as the marking body grows	Medium		High	Marker agreement falls below 85 per cent, or reconciliations exceed 8 per cent of scripts
Regulatory	A jurisdiction restricts the marketing of unaccredited qualifications	Medium		Medium	Regulatory correspondence, or a platform advertising rejection citing accreditation
Reputational	A credential is questioned and verification does not satisfy the questioner		Low	High	A verification enquiry escalates to a complaint
Retention	Continuation between levels falls below the modelled rate	Medium		High	Any level's continuation falls 5 points below plan for two cohorts

DOMAIN	RISK	L	I	EARLY WARNING
Cost inflation	Instructor compensation rises faster than the tariff	Medium	Medium	Loaded instructor cost rises more than 8 per cent in a year
Content currency	The curriculum ages without a revision cycle	Medium	Medium	Any level goes three years without substantive revision
Expansion	A market opens before the institution can serve it	Medium	Medium	Enquiries from an unopened market exceed 10 per cent of total
Liquidity	A year of falling enrolment meets a cost base that does not fall with it	Low	High	Reserve coverage falls below six months of operating cost

Owners are named in the governance schedule.

The Decade

THE CHAIN OF ACADEMIC AUTHORITY

Where a decision stops

The College’s own plate, carrying the appointments as they stand.

WHAT IS STILL MISSING, AND WHAT EACH ONE BLOCKS

External Examiner	until then, no award can be conferred
BASCE members	until then, no competency mapping is approved
A convened Senate	until then, no skill mapping is approved
Academic Reviewer	until then, no volume is independently read

Governance and authority

Who decides what, and the separations that protect a learner.

DECISION	DECIDED BY	ADVISED OR EXECUTED BY	CYCLE
Tuition and the published tariff	Board of Governors	College Executive	Annual, against the teaching allocation
Fee remission and hardship awards	Academic Senate	Registrar	Each round, against published criteria
Partner and sponsor bands	Board of Governors	Marketing and Partnerships Lead	Published; not negotiable case by case
New qualifications and levels	Academic Senate	Board of Academic Standards	On proposal
Examination papers and rubrics	Board of Academic Standards	Registrar	Each sitting, published before the work
Conferral of an award	Registrar	Academic Senate	On eligibility, with no override
Withdrawal or replacement of an award	Registrar	Board of Governors	On reasoned application
Annual budget and acquisition spend	Board of Governors	Chief Executive	Annual
Material technology expenditure	College Executive	Board of Governors above threshold	On proposal

GOVERNANCE AND AUTHORITY — CONTINUED

DECISION	DECIDED BY	ADVISED OR EXECUTED BY	CYCLE
Instructor compensation and establishment	College Executive	Board of Governors	Annual
Appointment of the External Examiner	Board of Governors	Academic Senate	On vacancy
International partnerships	Board of Governors	Academic Senate for academic terms	On proposal
Reserve policy and drawdown	Board of Governors	—	Annual, and on any drawdown

Several offices named here are defined and unfilled, and the platform refuses to publish a person into an office they have not accepted.

Method

VII

Method

Where every figure came from, and the audit that proves the document agrees with itself.

Four data files enter, three modules compute, one document leaves. No figure in this publication is typed into a page, and the chain is re-run as a test on every build.

Where every figure comes from

One engine, four files. Nothing is typed into a page.

SOURCE	WHAT IT CARRIES	CLASS
<code>data/tuition.json</code>	The adopted fee, its decomposition in basis points, the level structure and the refund window.	VERIFIED
<code>data/commercial.json</code>	The three routes, the independent steps, the partner bands, remission and referral.	VERIFIED
<code>data/market-evidence.json</code>	Every priced observation with its provider, local price, hours and source address.	VERIFIED
<code>data/masterplan.json</code>	The revenue-allocation framework, the market and progression assumptions, and the establishment.	BOARD DECISION REQUIRED
<code>pricing.mjs</code>	Delivery cost hour by hour, the demand model, the channels and the tariff.	MODELLED
<code>allocation.mjs</code>	The framework made binding, and the tariff solved from it.	MODELLED
<code>projection.mjs</code>	The ten years, with revenue recognised in the year it is taught.	MODELLED

`tests/masterplan.test.mjs` runs the reconciliation on every build and re-derives the proposed price from the allocation framework, so the price cannot drift away from its reason.

A planning instrument, and not a record of trading.

Every financial figure in this publication is a projection computed from stated assumptions, and every claim carries its standing.

VERIFIED	The College holds it, and it is published.
MODELLED	This plan asserts it, from stated assumptions.
BOARD DECISION REQUIRED	Nobody has decided it yet.

The College claims no accreditation, ranking, partnership or endorsement it does not hold, and names no person in an office they have not accepted.
